## AVERAGE HOURS WORKED

AND<br>AVERAGE HOURLY EARNINGS

## AS REPORTED

## AT THE BEGINNING OF

## OCTOBER, 1947

$\qquad$

## EXPLANATION OF THE TERMS USED IN THIS REPORT.

Wage-Rarners.- Employers are asked to furnish monthly stacistikes on manc hours on behall of those wage-earners for whom they keep a record of aggregate hours worked, so that the data relate, in the main, to persons amployod at houriy rates. Information for salaried amployees is purposely excluded, while in many cases, statistios of man-hours are not available for cortaln olasses of wagemarners, whose earnings, like those of most salaried omployees, are not directly dependent upon the number of hours wo ked; examples of wage-eprnars frequently excluded are route drivers, plece-workers in many but not all establishments, truck men, etc. In addition, some omployers do not keep a record of man-hours for any classes of employees. hocordingly, the number of workers for whom statistics are given in the present bulletin is smaller than the total number of employees, (salaried personnel and wage-oarners) for whom statistios of employment and payrolls are obtained in the monthly surveys on these subjeots; the results of these surveys are published in the monthly bulletins on omployment and payrolls, which also contain data relating to the sex distribution of the workers in reoorded employment, an impartant factor contributing to differences shown in the average earnings in various industries.

The monthly statistics of average hours and average hourly arninfs, like those of employment and average weokly earnings relate, in the main, to ostablishnonts usually employing 15 persons and over, the smaller firms boing excluded for reasons of economy in terms of cost and time. In the oase of the manufacturing industries, (largely represented in the material of the present bulletin), the statistics relate to over $75 \mathrm{p}, \mathrm{c}$ o of all selaried amployees and wage-earners reported by the establisim ments oo-operating in the monthly surveys of employment and payrolls; at the date of the last Decemial Census, (June 1, 1941), the manufacturers furnishing monthly data employed approximately 93 p.c. of all persons onumerated as at work in manufacturing.

In mining and construction, data on hours and earnings are currently avallable for some 85 p.o. and 83 p.o. of the total smployees reported to the monthly surveys of employment and payrolls ip those industries, respectivelys at June 1. 1941. the oomoperating mine operators had apployed over 96 p.o. of all wage-earners at work as onumerated in the Census, whilo the omployers in construction whose statistios were then received had reported over 79 p.c. of the Census total of employees at work in that group. It should be noted that the comparisons with the census figures are complicated by differences in the olassifications used in compiling the two series, so that the percentages of coverage are only approximate.

Man-Hours.- The atatistics of man-hours include overtime as well as the hours worked by part-time and casual workers. Hours oredited to persons absent on leave with pay in the recorded pay poriod are inoluded in the statiatios as though the hours for which payment was made had been worked.

Wages.- The wages reported represent gross earnings before deductions are made for taxes, unemployment lusuranoe, etc.; they do not, however, include the value of board and lodging which in some cases is part of the remuneration of workers. Incentive and produotion bonuses and overtime payments are included, as are sums paid employees absent on leave with pay during the pay period for which statistics are given. The figures of average weakly wages result from the multiplication of the average hours worked during the period of observation, by the average hourly earnings reported in the same period.

Pay Periods.- Statistion of man-hours and hourly wages reported for periods exceeding one week in duration are reduced by the appropriate proportions to obtain for tabulation purposes the number of houre worked and the hourly earnings ia ne week in the indicated pay period; suoh information is then addod to the data furnishod by employers who pay on weokly basis, so that, in all cases, the tabulated dat represent the situation in one week in each month.

OTTANA - CANADA

## STATISTICS OF MAN-HOURS AND HOURIY EARNINGS AS REPORTED AT OCT: 1, 1947, WITH COMPARISONS AS AT SEPT. 1, 1947, AND OCT. 1, 1946.

Dominion Statistician:<br>Director, Labour and Prices Statistics:<br>Chief, Employment and Payroll Statistics Branch:<br>Herbert Marshall<br>H.F. Greenway<br>M.E.K. Roughsedge

1. Manufacturing.

Largely as a result of the dispute in the meat packing industry, there was a slight decline, on the whole, in the number of hourly-rated wage-earners reported by 6,374 leading manufacturers to the Dominion Bureau of Statistics at Oct. 1 as compared with Sept. 1; the aggregate hours worked, however, showed an increase, indicative of a return to more usual working conditions following the holiday season. The wages disbursed were also higher partly as a result of this factor, but also due to the payment of higher wage-rates in many industries and establishments. The wage-earners for whom the co-operating employers furnished data on man-hours numbered 782,010 at Oct. 1, as compared with 783,166 at the first of September, there being a loss of 0.1 p.c. The reported working hours in the week of Oct. l aggregated 33,647,408, exceeding by 1.5 p.ce the total of $33,161,639$ hours worked in the same plants in the week of Sept. l. The weekly wages paid by these firms to their hourly-rated personnel at the date undor review amounted to $\$ 28,072,844$, as compared with $\$ 27,270,384$ in the week of Sept. l. The increase was 2.9 p.c.

The average hours worked in the plants from which information was received rose from 42.3 in the week of Sept. 1 , to 43.0 in that of Oct. 1 , as compared with 42.9 and 44.7 at 0ct. 1 in 1946 and 1945, respectivelyo A new maximum was indicated in the average hourly earnings in the period under review, when the general rate was 83.4 cents, as compared with 82. ? cents at Sept. 1. 71.4 cents at Oct. 1. 1946, and 67.8 cents at that date in 1945. As already stated, increased wage rates in several industries contributed to the higher average generally indicated in manufacturing in the latest monthly survey, which was the lith in succession in which the trend has been upward.

The wage-earners for whom cata were available at Oct, l, earned a weekly average of $\$ 35.86$ before deductions for income tax, unemployment and other insurance contributions, etc. The mean in the week of Sept. I was \$34.77, while at Oct. 1 in 1946 and 1945 , the weekly averages were $\$ 30.63$ and $\$ 30.31$, respectively. The weekly wages of the hourly-rated wage-earners employed by the co-operating manufacturers at Oct. 1 showed an increase of $17.1 \mathrm{p} . \mathrm{c}$. in comparison with the figure for a year earlier, and of $18.3 \mathrm{p}, \mathrm{c}$. as compered with Oct. $1,1945$.

The statistics of average hours worked and average hourly earnings in manufacturing in the period for which data are available are sumarized in the table on the following page.

Hours Worked. - The working time of persons for whom the leading manufacturers maintained a record of hours worked totalled 33,647,408 in the week of Oct. 1 .
as compared with $33,161,639$ worked by their hourly-rated wage-earners in the weok of Sept. 1. The increase, which amounted to 1.5 poces was due in large part to a resumption of more normal hours following the vacation period; the advance at Oct. 1, 1946, had been given as 1.2 p.c.

In the heavy manufactured goods industries, the comoperating plants indicated a total of $17,039,761$ hours in the week of Oct. 1, a figure which exceeded by 2.7 p.c. the aggregite of $16,599,592$ hours worked in the same factories in the week of Sept. 1。 Within this category, (in which the reported wage-earners rose by * The averages at these dates were affected by loss of working time at the year-end holidays in the oase of Jan. $l_{0}$ and by the Easter holldays in the case of Apr. $l_{\text {. }}$ 1945, and May 1. 1946.
0.3 p．c．to a total of 391,716 at Oct．1），there were general increases in the working time．The gains in the iron and steel and non－ferrous metal divisions were particularly noteworthy，but other groups also shared in the upward movement in the asgracets hours．

The situation in the non－durable manufactured goods was seriously affected by the strike in meat－packing plants，in which the indicated hours fell in the month by 64.8 p．c．，to 232,607 in the week of Oct． 1 。 In spite of this important loss in working time，the aggregate hours reported in the larger factories turning out light manufactured goods rose by 0.3 pocos from $16,562,047$ in the week of Sept． 1 to $16,607,647$ in that of Oct．1。 In this broad division，the wage－ earners for whom statistics were available at the latter date numbered 390，294，a decline of 0.6 poce from the total indicated a month earlier．

The hours worked by the reported hourly－rated wageoearners in the week of Oct．I averaged 43.0 ，as compared with 42.3 in the week of Sept．1，1947．At Oct． 1 in 1946 and 1945，the means were 42.3 and 44．7，respectively．Employees for whom records of hours worked were available in leading factories producing heavy manufactured goods worked an average of 43.5 hours，as compared with 42.5 hours in the week of Sept．1，1947，42．8 hours in the week of Oct．1，1946，and 45．0 hours in that of Cct．1，1945．In the nonedurable manufactured goods division，the reported hours averaged 42.6 in the week under review，as compared with 42.2 in that of Sept．1，1947．In 1946 and 1945，the averages at Oct．I were 42.8 and 44.5 hours，respectively．

Hourly Earninge．－The amounts paid in weekly wages to the hourly． rated wage－earners reported in manufacturing at oct． 1 were stated as $\$ 28,072,844$ ， as compared with disbursements of $\$ 27,270,384$ made by the same establishments in the week of Sept．I．In the heavy manufactured goods industries，the coooperating manufacturers paid the sum of $\$ 15,403,287$ in weekly wages to the wagerearners of whose hours of work they kept record；this was greater by 4.5 poce than that of $\$ 14,734,608$ disbursed by the same firms to their hourly－rated employees in the week of Sept． 1. In the light manufactured goods division，the coooperating establishments indicated the payment of $\$ 12,669,537$ to their hourly rated personnel，a sum which exceeded by 1．1 poc．their Sept． 1 disbursements of $\$ 12,535,776$ ．As already stated，upward adjustments in wage rates were reported in several industries in the durable and the non－durable manufacturing industries at the date under review，when there was also a considerable advance in the aggregate and average hours worked in the factories for which data are available．

The average hourly eamings in manufacturing as a whole rose to a new maximum at Oct． 1 ；the figure was then 83.4 cents，as compared with the previous high of 82.2 cents at Sept．1。 At Oct． 1 in 1946 and 1945 ，the means were 71.4 cents and 67.8 cents，respectively．The average hourly rate has increased by 16.8 poco in the year，while the rise in the 24 months＇comparison was 23 p．c．

The manufacturers furnishing data in the durable goods division indicated an average hourly rate of 90.4 cents at the date under review，as compared with 88.8 cents at Sept．1，1947，77．8 cents at Oct．1，1946，and 75．4 cents at Oct．1，1945． In the 12 months＇comparison，the rise amounted to 16.2 p．c．e and that in the 24 months＇comparison，to $19.9 \mathrm{p}, \mathrm{c}$ ．In this division，further advances were indicated in several branches of the lumber，clay，glass and stone，electrical apparatus，iron and steel and non－ferrous metal industries．

As already indicated，the situation in the light manufactured goods group was seriously affected by the strike of meat－packers；the hourly earnings in the division，at 76.3 cents，were nevertheless slightly above the Sept． 1 mean of 75.7 cents，previously the maximum in the record of almost three years．At Oct． 1

In 1946 and 1945 , the averages were 65.7 cents and 60.4 cents, respectively. In the 12 months, the increase in the class of nondurable manufactured goods industries has amounted to $16.1 \mathrm{p}, \mathrm{c}$, , and that in the 24 months, to $26.3 \mathrm{p} . \mathrm{c}$. In comparison with the Sept. 1 figures, there were increases in a considerable number of groups, notably in leather, vegetable food, paper, printing and publishing, rubber, textile tobacco, chemicals, petroleum and other chasses. There were widespread advances as prepared with Oct. l of last year:

> Average Weekly Eamings. is has been pointed out in preceding bulletins, statistics of manehours and hourly earnings are not available for all classes of wage -earners, but only for those workers for whom employers keep accurate records of hours worked, such workers being mainly those who are paid by the hour; in general. this restriction results in the exclusion of salaried personnel. Among the classes of wage-eamers for whom satisfactory records of hours worked are frequently not available are pieceworkers in some but not all establishments, route drivers, delivery men, etc. It may be noted that many firms state that the earnings of their wage earners paid at other than hourly rates exceed those of their hourly-rated personnel: this is particularly the case among pieceworkers. In general, however, the wage earners for whom statistics are given in the present bulletin form important proportions of the total personnel of the cooperating establishments. At Oct. 1 , the wage -earners for whom information on manohours and hourly earnings were available made up 75.2 pos 。 of the total number of persons of all categories on the payrolls of the manufacturers $1 /$ furnishing monthly statistics of employment and payrolls at the same date: in the heavy manufactured goods division, the proportion was 79 poos and that in the light manufactured goods division, 71.8 poco.

The movements in the average earnings of salaried employees and wage w earners in the period commencing at Nov. 1. 1944, and those in the weekly earnings of hourlywated wage-earners, are given in Table 2 on the following page; the latter figures are obtained by multiplying the average hourly eamings in the week of observation by the average hours worked in the same week. In manufacturing as a whole, there was a rise of 87 cents from Sept, I in the weekly salaries-and-wages figure reported at the beginning of October, when the rise in the weekly wages paid to the hourlyerated staff of the same firms amounted too $\$ 1.09$; it will be recalled that the hours of work were higher at the date under review. In the heavy manufactured goods industries, the weekly salaries=and-wages figure advanced by \$1.41 at Oct. 1, while the weekly wages in that category were higher by \$1.58 than at Sept. 1 。 In the non-durable manufactured goods division, the average weekly earnings of the salaried and wage earning personnel were increased by 37 cents as compared with Sept. 1 e since when the weekly earnings of the hourly $\begin{gathered}\text { rated staffs of }\end{gathered}$ the cooperating establishments have risen by 55 cents.

The following table shows the advances at the date under review in comparison with Oct. 1 in 1946 and 1945, in the weekly salaries-and-wages figures and the weekly wages paid the hourlyorated staffs of the reporting manufacturing establishments:

Industrial Divisions

All Manufacturing Durable Manufacturing
Non-Durable Manufactured Goods
Increases at Oct, 1, 1947, as compared with-

1/ That is, of establishments usually employing 15 persons and over. See the monthly bulletins on Employment and Payrolls

As compared with Oct．1，1946，the most recent figures of wages paid hourly－rated wage－earners in the all－manufactures group，and in plants turning out durable and non－durable manufactured goods，showed larger increases，in money and in percentages，than were noted in the more general figures of salaries and wages．This was also the case in the comparison with the averages indicated at Oct． $1,1945$.

TABLE 2．－AVERAGE WEEKLY SALARIES AND WAGES，AND AVERAGE WEEKLY WAGES OF HOURLY－ RATED WAGE－EARNERS AS REPORTED IN MANUFACTURING AS A WHOLE，AND IN THE MANUFACTURE OF DURABLE GOODS AND OF NON－DURABLE GOODS．

| Aug． | 1 | 36.35 | 34.55 | 39．26 | 37.36 | 34.65 | 31.64 |
| Sept． |  | 37.05 | 34.77 | 39.49 | 37.74 | 34.83 | 31.95 |
| Oct． | 1 | 37.92 | 35.86 | 40．90 | 39.32 | 35.20 | 32.50 |

The percentage changes in the figures of salaries and wages，and in those of the weokly wages shown in the table on page 4 nevertheless did not greatly differ．A comparison of the latest data with the averages indicated at Nov．1，1944，when the record commenced，however，shows considerably more variation in the increases；thus， 1／Exclusive of electric light and power．＊See footnote on page 2 。
the general figure of wookly salaries and wages in manufacturing as a whole since then has risen by 14.5 poco，whereas the gain in the weekly wages amounted to 10.2 p．c．； in the case of the durable manufactured goods industries，the increase among salaried employees and wage－earners as compared with Nov．1，1944，was 11．5 p．c．， and that among wagewearners， 7.7 p．c．，while in the light manufactured goods division， there was a rise of 21.4 p．c．in the more general figure of weekly earnings，as compared with that of 19.4 p．c．reported in the weekly wages of the hourly－rated personnel．Differences in the industrial distribution of the workers now indicated as compared with that existing in the latter months of the war and curtailment of overtime work contribute materially to the greater disparities shown in the comparison with Nov．1．1944，while the relaxation of wartime controls on salaries has also been a factor：

> 2. Non-Manufacturing Industries.

The proportion of wage－earners paid by the hour in the non－manufacturing industries are smaller than in the case of the manufacturing industries，with the result that records of hours worked are frequently not available for such persons． The representation in the non－manufacturing industries in the monthly statistics of man－hours and hourly earnings is therefore less than in the manufacturing division．

Little general change was shown at Oct． 1 in the number of hourlymrated wage－earners on the staffs of the reporting coal operators，but following the vacation season，the aggregate hours worked in their establishments were higher， at 853.041 ，as compared with 829,044 in the week of sept．1．The average hours were also higher，at 39.7 ，as compared with 38.6 in the preceding report．The latest average，however，was lower than that of 40.9 in the week of Oct．$l_{\text {，}} 1946$ ． The average hourly rate at the date under review stood at 110.8 cents，being lower by one ofifth of a cent than the average indicated at Sept。1。 At Oct．I in 1946 and 1945，the means were 95.7 cents and 94 cents，respectively．In the metallic ores division，there was a further decline in the number of wagearners，together with a relatively smaller reduction in the hours worked，so that the average hours per man， at 44.9 ，were higher in the week of Oct． 1 than in the week of Sept．1，when the mean was 44.2 hours．The average hourly oarnings at the latest date stood at 103.3 cents， as compared with 102.6 cents at Sept．1。 At Oct． 1 in 1946，the indicated rate was 89.2 cents，and that in $1945,86.1$ conts．In the miscellaneous non－metallic mineral mining group，the coooperating operators reported a decresse in the number of hourly－ rated wage－oarners，but the hours and the earnings were higher，in the aggregate and on the average．The latest hourly rate was 80.9 cents，the highest in the record． The Sept． 1 mean was 80.2 ，while at Oct． 1 in 1946 and 1945 ，the figures were 70.5 cents and 65.6 cents，respectively．

In the local transportation group，the number of hourly－rated wage－earners reported in the local transportation group（consisting mainly of street and electric railway employees），was rather smaller than at Sept． 1 ，although the aggregate and average working hours were higher，as was the 2verage hourly rate；this stood at 85.4 cents，as compared with 84.8 cents at Sept．1． 76.8 cents at Oct．1，1946，and 70.5 cents at the beginning of October in 1945.

Statistics were received from 1,064 of the larger building contractors， whose hourly－rated wage earners numbered 85,362 at the date under review，when the working hours of these persons were reported at $3,445,549$ ，and their woekly wages， at $\$ 3,267,718$ ．In comparison with their figures at Sept． 1 there was an increase of 1.4 p．c．in the wagecarners，of $2.4 \mathrm{p} . \mathrm{co}_{0}$ in the indicated hours，and of $3.1 \mathrm{p} . \mathrm{c}$ ．in the weokly wages．The average hours rose from 40 in the week of Sept． 1 ，to 40.4 in that of Oct．1，when the average hourly rate was 94.8 conts，as compared with 92.9 cents a month earlier．At Oct． 1 in 1946 and 1945，the averages were 85.3 cents and 81.4 cents，respectively．In regard to the rates in the building industry，it will
be recalled that large numbers of unskilled and casual workers are employed therein, as well as many skilled tradesmen at high rates of pay. In the highway construction and malntenance group, the reported number of wage-earners showed a decrease. The aggregaile and average hours were also lower, as was the reported total of weekly wages; op the other hand, the average hourly rate advanced from 71.5 cents in the week of inpt. 1 , to 72.6 cents in that of Oct. l, 1947; the average was then higher than that of 65.8 cents at Oct. 1, 1946, also exceeding the Oct. 1, 1945, mean of 63.1 cents.

Seasonal curtailment in operations was indicated by the 307 cooperating hotels and restaurants, in which the hourly-rated employees declined from 23,624 at Sept. 1 to 22,712 at Oct. 1 , when the average working time was unchanged, at 43.3 hours. The average hourly rate, however, was slightly higher, rising from 52.2 cents at the weak of Sept. 1, to 53.4 cents at that of Oct. 1. The latter figure also exceeded the Oct. 1, 1946, mean of 47.5 cents, and that of 41.8 cents at Oct. 1, 1945. In the laundries and dry-cleaning division, the reporting firms employed a rather larger number of wage-earners, whose hours of work averaged 40.8 in the week of Oct. 1, as compared with 40.6 in the week of Sept. l. The average hourly earnings also increased, from 56.2 cents at that date, to 57.7 cents at Oct. 1, as compared with 49.8 cents in the week of Oct. 1, 1946; at Oct. 1 in 1945, the average was 48.3 cents.

## 3. Provincial Statistics for Loading Industries.

Statistics of hours worked and average hourly earnings in manufacturing as a whole in the various provinces in the period since June 1. 1945, are presented in Table 4, while data for the industries in which considerable numbers of hourlyrated workers are reported in the various provinces are contained in Table 5.

Small declines were reported in Nova Scotia, New Brunswick, Manitoba and Alberta in the average hours worked in manufacturing as a whole in the week of Oct. 1 , as compared with that of sept. l. The reductions were due in part to the strike in the meat-packing industry. Firms in Quebec, Ontario, Saskatchewan and British Columbia, however, showed slightly longer hours of work, on the average. As compared with the average hours indicated for the weak of Oct. 1, 1946, there were decreases in New Brunswick, Manitoba, Saskatchewan and British Columbia, together with small increases in that comparison in the remaining provinces. In all areas, the average hours reported in manufacturing establishments were lower in the week of Oct. 1, 1947, than in the corresponding period in 1945.

The following table shows the percentage increases in the various provinces at Oct. 1, 1947, in manufacturing as a whole, as compared with the same date one year and two years earlier.

Increases in indicated hourly rates in manufacturing at Oct. 1, 1947, as compared with

| Provinces | Oct. 1,1946 |  | Oct. 1,1945 |
| :--- | :---: | :---: | :---: |
|  | p.c. |  | p.c. |
| Nova Scotia | 13.7 |  | 9.0 |
| New Brunswick | 15.1 |  | 23.5 |
| Quebec | 13.8 |  | 20.7 |
| Ontario | 19.7 |  | 26.3 |
| Manitoba | 11.8 |  | 19.2 |
| Saskatchewan | 16.8 |  | 26.5 |
| Alberta | 11.5 |  | 15.4 |
| British Columbia | 14.9 |  | 22.7 |
| CANADA | 16.8 |  | 23.2 |

The average hourly earnings indicated in all province except Nova Scotia were higher at Oot． 1 than at Sept．1．The most noteworthy increases in the month were those of 1.7 cents in British Columbia and 1.3 cents in Quebec．In the former province，the general rate for the first time in the record wes over $\$ 1.00$ per hour， standing at $\$ 1.01$ ，as compared with 87.1 conts at $0 c t$ ． 1,1946 ，and 81.6 aponts at Oct．1，1945．

It will be noted that although the rates in all provinces have risen considerably in recent months in most industries，the general rise in manufacturing in the various provinces is materially affected by the industrial distributions therein．The table on page 7 gives the percentage increases in the last year and the last two years．

The number of hourly－rated wagecearners in manufacturing（exclusive of central electric power stations）in the different provinces for whom statistics of man－hours and hourly earnings were available at the date under review，together with their average weekly eamings at Sept。l and Oct。l。1947，and Oct． 1 in 1946 and 1945，are shown below：－

| Provinces | Hourly－rated Wage Earners Reported at Oct．1． 1947 | Weekly Wages |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Oct．1 | Sept．1 | Oct． 1 | Oct． 1 |
|  |  | 1947 | 1947 | 1946 | 1945 |
|  | no． | $\underline{4}$ | T |  | \＄ |
| Nova Scotia | 19，843 | 33.58 | 33.90 | 28.33 | 31.45 |
| New Brunewick | 16，366 | 34.11 | 34．46 | 30．50 | 28.55 |
| Quebec | 256，943 | 33.99 | 33.03 | 29.86 | 29．28 |
| Ontario | 388，871 | 36.97 | 35.73 | 30.51 | 30．31 |
| Manitoba | 25.437 | 34.07 | 34．09 | 30.62 | 29．89 |
| Saskatchewan | 4.521 | 35．74 | 34．48 | 31.39 | 28.93 |
| Alberta | 12，769 | 33.99 | 33.73 | 30.30 | 30．22 |
| British Columbia | 2． 56,874 | 39．24 | 37.49 | 35． 28 | 34.76 |
| Canada | 782，010 | 35.86 | 34.77 | 30.63 | 30.31 |

## 4．Sutistios ion the Larger Cities．

Statistics of average hours worked and average hourly earnings in manufaoturing as a whole in the larger cities in the last 25 months are given in Table 6，while Table 7 contains data for leading industries in these centres as at Sept． 1 and Oct． 1 of the present year，and Oct．1，1946．

As has previousiy been pointed out，the disparities in the average rates in manufacturing as a whole in these cities，as in the provinces，are partly or largely due to existing differences in the industrial distributions of the wage－ earners for whom statistics are available；the related sex distribution also constitutes another important factor．

In manufacturing as a whole，the average hours reported in the week of Oct．I were higher than in the week of Sept，I in Montreai．Toronto，Hamilton and Vancouver，but a general reduction of half an hour was reported in Winnipeg．As compared with the week of Oct．1，1946，there were silght increases in the average hours worked in manufacturing as a whole in Montreal．Toronto and Hamilton．In Winnipeg and Vancouver，however，the latest averages were rather lower than those reported in the week of Oct．1，1946。

The average hourly rates in manufacturing as a whole showed further advances at the date under review in each of the cities for which data are given in

Table 6. The largest increase from Sept. 1 was that of 2.7 cents in Vancouver. In all five centres, the averages were also higher then at Oct. 1 in 1946. In this comparisdn, the increases were as follows:- Montreal, 12 p.c.., Toronto, 18.2 p.c., Hamilton, 125.3 p.c., Winnipeg, 11 p.c., and Vancouver, 13.3 p.c. As already stated, the rates of fincrease depend to a considerable extent upon the industrial distribution of the reported wage-earners in the given city or area. The general increase in the year in manufacturing as a whole in Canada at Oct. 1 was 16.8 p.c.; the percentage advances in the various provinces are indicated in an earlier paragraph.

The following table gives the average weekly earnings of the hourly-rated personnel reported by the comperating manufacturers in certain leading centres at Sept. 1 and Oct. 1, 1947, and Oct. 1, 1946.

| City | Hourly-rated Wage- | Weakly Wages |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Earners Reported at | Oct. 1 | Sept.l | Oct. 1 |
|  | Oct. 1, 1947 | 1947 | 1947 | 1946 |
|  | no. | * | \$ | \$ |
| Montreal | 130,522 | 33.91 | 32.81 | 30.22 |
| Toronto | 109,513 | 35.74 | 34.49 | 30.01 |
| Hamilton | 41,096 | 38.06 | 36.80 | 30.10 |
| Winnipeg | 22,437 | 33.12 | 33.19 | 30.12 |
| Vancouver | 22,544 | 38.41 | 36.98 | 34.35 |

The general increases shom at Oct. 1,1947 , in the everage weekly earnings of the hourly-rated employees of the co-operating manufacturing establishments in the above-named oities are substantial; in the yoar, the advances in Montreal amounted to 12.2 p.c.e in Toronto, to 12.1 p.co, in Hamilton, to 26.4 p.c.e in Winnipeg, to $10 \mathrm{p} . \mathrm{ceg}_{0}$, and in Vancouver, to $11.8 \mathrm{p} . \mathrm{c}$. In Canada as a whole, the general rise in manufacturing in the 12 months amounted to 17.1 p.o., bringing the Oct. 1, 1947, figure of weokly earnings of the hourly-rated personnel to \$35.36. As compared with Oct. 1, 1945, there were increases in the average wages reported in manufacturing at the date under review as follows:-Montreal, $10.4 \mathrm{p} . \mathrm{c}$. , Toronto, 19.3 p.c., Hamilton, 19.7 p.c., TYinnipeg, 11.7 poco, and Vancouver, nine poc.

Table S.- Average Houra and Average Eourly and Weokly Earninge of Wege-Barners for Whon Data are available Oot. 1, 1947, With Comparative Figures for Sopt. 1, 1947, and Dot. 1, 1946.
(The letest figures are subjeot to revieion).
