STATISTICS OF

## AVERAGE HOURS WORKED

## AND <br> AVERAGE HOURLY EARNINGS

## AS REPORTED

AT THE BEGINNING OF
MARCH 1947

Wago-Earners.- Employers irc asked to furnish statistics of manhours on behalf of those wage-earners for whom they keep a record of ageregate hours worked, so that the datarelate, in the main, to persons employed at hourly rates. Information for salaried omployees is purposely excluded, while in many cases, statistics of man-hours are not availat is for certain classes of wage-sarners, whose earnings, like those of most salaried employees, are not direotly dependent upon the number of hours worked; examples of wage-earners frequently excluded are route drivers, piece workers in many but not all establishments, truck men, otc. In addition, some employers do not keop a record of man-hours for any classes of employees. Accordingly, the number of workers for whom statistics are given in the present
 personnel and wage-earners) for whom statistics of employment and payrolls are obtained in the monthly surveys on these subjects; the results of these surveys are published in the monthly bulletins on employment and payrolls, which also contain data relating to the sex distribution of the workers in recorded employment.

Man-Hours. - The statistics of man-hours inciude overtine, as well as the hours worked by part-time and casual workers. Hours credited to persons absent on leave with pay in the reported pay period are included in the statistics as though the hours for wich payment was mado had beon worked.

Wages.- The wages roported represent gross earnings before deductions are made for taxes, unomployment insurance, etc.; they do not. however, include the value of board and lodging which in some cases is part of the remuneration of workers. Incentive and produotion bonuses and overtime payments are includec; as are sums paid employees absent on leave with pay during the pay period for which statistics are given. The figures of average woekly wages result from the multiplication of the average hours worked during the period of observation, by the average hourly earnings reported in the same period.

Pay Poriods.- Statistios of man-hours and hourly wages roportad for periods exceading one weak in duration are reduced by the appropriate proportions to obtain for tabulation purposes the number of hours worked and the hourly earnings in one weak in the indicated pay period; such information is then added to the data furnished by employers who pay on a weekly basis, so that, in all cases, the tabulated data represent the situation in one week in each month.

1．Manufacturing．
There was an increase of $0.6 \mathrm{p}, \mathrm{c}$ ．in the number of hourlyorated wage－ earners on the staffs of the manufacturers comperating in the Dominion Bureau of Statistics＇monthly survey on man－hours and hourly earnings as at Maro $l_{3}$ this gain was accompanied by a rise of 1.1 p．c．in the aggregate hours worked in the week preceding，and of two $p_{0} c$ ．in the wages paid for services rendered in these hours． In part，the improvement was seasonal in character．Data were received from 6，348 employers，who reported a total of $32,799,821$ hours as having been warked by 755,658 wageoarners，earning $\$ 25,272,805$ in the final week in February．In their preceding return，these firms had employed $751_{0} 445$ hourly－rated wagemearners，working $32,433,874$ hours in the last week of January，for which they were paid the sum of $\$ 24_{, ~ 784,984 。}^{\circ}$

The average of hours worked was slightly higher，being 43.4 in the week of Mar，l，as compared with 43.2 in that of Fabol， 1947 ．The latest mean，however， was lower than those of 44 and 45.8 in the week of Mar。I in 1946 and 1945， respectively。

The average earnings per hour indicated at the date under review reached a new maximum，standing at 77.1 cents，as comparad with 76.4 cente a month earlier， 67,8 conts at Mar．$I_{0} 1946$ ，and 70.1 cents at Mar。 $I_{0} 1945$ ．As already stated，the increase in the hourly rate in the comparison with Feb． 1 resulted partly from the seasonal movements in industry，there being fairly large declines of this character in omployment for workers in groups where the oamings normally are below the general avorage，accompanied by fairly substantial increases among certain classes in which the rates are above－average．The payment of higher wage－rates in certain categories was also a factor．

The weokly wages indicated in manufacturing as a whole averaged $\$ 33.46$ at the date under review，as compared with $\$ 33.00$ in the weak ending $F$ ebe 1，1947， $\$ 29.88$ in the week of Mar．1， 1946 ，and $\$ 32.11$ in that of Mar。1．1945．The general increase in manufacturing in the 12 months amounted to 12 poco

Hours Vorked－The aggregate hours worked by hourlymrated wageaerners In manufacturing at Maro 1，were given as $32,799_{\rho} 821$ ，a total exceading by $l_{0} 1$ poc。 that of $32,433,874$ hours reported by the same firms at Feb。1。 The time worked in food and boverage factories was lower than was the ease a month earlier but in the other leading industrial groups，the indicated hours showed considerable increases in this comparison．In the durable manufactured goads division，the hours reported aggregated $16,410,281$ at Mar．$I_{0}$ as compared with $16,093,010$ in the week of Feb． $1_{3}$ the gain amounted to two $p_{0} c$ ．In the non－durable manufactured goods division，the hours totalled $16,389,540$ ，being 0,3 poc higher than the aggregate of $16,340,864$
worked in the co－operating establishments in the week of Feb。l．
In manufacturing as a whole，the hours worked in the week of Met．$\%$ 1947， averaged 43．4，exceeding by one－fifth of an hour the average indicated a monthearlier． As compared with Mar．1，1946，however，there was a decrease of three－fifths of an hour in the weekly average，which was lower by 2.4 hours than at Mar．1，1945．In plants turning out heavy manufactured goods，the latest average of hours morked at 43．6，was higher by two－fifths of an hour than at Fob。1，but was less by three－ fifths of an hour than at Mar． 1 of last year，and by 2.9 hours than at Mar．1， 1945. In the light manufactured goods industries，the reported hours averaged 43．2，as compared with the mean of 43.1 at Feb．1，1947．At the beginning of March in 1946 and 1945，the averages were 43.9 hours and 45 hours，respectively．

The statistics of average hours worked and average hourly earnings in manufacturing in the period，for which data are available are summarized in the above table．
＊The averages at these dates were affected by loss of working time at the year－end holidays in the case of Jan．$l_{0}$ and by the Easter holidays in the case of Apr． 1 ． 1945，and May 1，1946。

Hourly Earnings. - The earnings of the hourly-rated wage-earners employed by the manufacturers furnishing data at Mar. I amounted to $\$ 25,272,805$, exceeding by two p. . the disbursements of $\$ 24,784,684$ indicated in the preceding survey. The weekly eaphings of hourly-rated wage-earners reported in the durable manufactured goods industries were stated as $\$ 13,817,333$, as compared with $\$ 13,443,793$ in the wook of Feb. 10. The increase was $2.8 \mathrm{p} \cdot \mathrm{C}$. In the non-durable goods division, the hourlyrated employees on the payrolls of the co-operating manufacturers received the sum of $\$ 11,455,472$ in weekly wages at Mar. $1_{0}$, an amount exceeding by one poco that of $\$ 11,340,891$ reported at Feb. 1。

The hourly earnings in manufacturing as a whole reached a new high at Mar. 1, when the average was 77.1 cents, as compared with 76.4 cents at Feb. 1. The Mar, 1 figure was higher by 13.5 pos. than that of 67.9 cents indicated a year earlier, and exceeded by 10 poco the Mar. 1. 1945, mean of 70.1 cents per hour.

In the durable manufactured goods industries, the hourly earnings averaged 84.2 conts at Mar. 1. 1947, as compared with 83.5 cents at Feb. 1, 1947, 74.5 conts at Mar。1, 1946, and 77.8 cents at Mar. 1, 1945. Within this category, the average earnings showed increases in the month in the lumber, ciay, glass and stone and elactrical apparatus industries, and in several divisions of the iron and steel and non-ferrous metal industries.

Wage-earners employed in the production of non-durable manufactured goods were paid an average of 69.9 cents. This was the highest in the comparatively brief record, being slightly above the Feb, 1 mean of 69.4 cents, and considerably higher than those of 61.5 cents at Mar. 1. 1946, and 60.3 at Mar. 1, 1945. In the month, the hourly earnings rose in many groups in the light manufactured goods industries; notable among these, were the increases reported in the animal food, leather, pulp and paper, textile, beverage and petroleum divisions. In some cases, the increases as compared with a month earlier were due to seasonal declines in employment among lower-paid workers.

Average Weekly Wages.- As has been pointed out in earlier bulletins, statistics on man-hours and hourly earnings are not available for all classes of wage-earners, but only for those workers for whom employers keep accurate records of hours worked, such workers being mainly those who are paid by the hours in general, this restriction also results in the exclusion of salarisd personnel. Among the classes of wage-earners for whom satisfactory records of hours worked are frequently not available are piece-workers in some but not all establishments, route-drivers, delivery men, etc. It may be noted that many firms state that the earnings of their wage-earners paid at other than hourly rates exceed those of their hourlymated personnel; this is particularly the case among piece-workers. In general, however, the wage-earners for whom statistics are given in the present bulletin form important proportions of the total personnel of the cooperating establishments. At the beginning of March, the wage-earners for whom data on man-hours and hourly earnings were available made up 75.5 poco of the total number of persons of all categories on the payrolls of the manufacturersl/furnishing monthly statistics on employment and payrolls at the same date; in the heavy manufactured goods industries, the ratio was 79.2 p.c. and that in the light manufactured goods division, 72.3 poc.

The high proportions which the hourly-rated wage-earners constitute of the total employees of the comoperating establishments lend interest to the comparisons in Table $2_{0}$ which shows the movements in the average earnings of salaried employees and wage-earners in the lust 29 months, and those in the weekly earnings of hourlymated wage-earners; the latter figures are obtained by multiplying the average hourly earnings in the week of observation by the average hours worked in the same week. In the month, there was an increase of 47 cents in
1/ That is, of establishments ordinarily employing 15 persons and over.
See the monthly bulletins on Employment and Payrolls.
the weekly salaries-and-wages figure reported at Mar. $l_{\text {p }}$ as compared with that of 46 cents in the weekly earnings of hourly-rated personnel.

TABLE 2.- AVERAGE WEEKLY SALARIES AND WAGES. AND AVERAGE WEEKLY WAGES OF 'HOTRLYRATED WAGE-EARNERS AS REPORTED IN MANUFACTURING AS A WHOLE, AND IN THE MANUFACTURE OF DURABLE GOODS AND OF NON-DURABLE GOODS:

| Nov. | 1. 1944 | \$33.13 | \$32.55 | \$36. 67 | \$36.52 | \$28.99 | \$27.23 |

| Mar. | 1 | 32.29 | 29.88 | 34.90 | 32.93 | 29.98 | 27.00 |
| Apr. | 1 | 32.69 | 30.37 | 55,34 | 33.49 | 30.30 | 27.32 |
| * May | 1 | 32.10 | 29.63 | 34.51 | 32.62 | 29.89 | 26.57 |
| June | 1 | 31.67 | 29.02 | 33.79 | 31.52 | 29.80 | 26.52 |
| July | 1 | 32.21 | 29.58 | 34.39 | 32.40 | 30.23 | 26.99 |
| Aug. | 1 | 32.53 | 30.10 | 34.62 | 32.75 | 30.58 | 27. 56 |
| Sopt. | 1 | 32.59 | 30.15 | 34.65 | 32.59 | 30.82 | 27.80 |
| Oct. | 1 | 33.06 | 30,63 | 35.43 | 33.30 | 31.08 | 28.19 |
| Nov. | 1 | 33.32 | 30.91 | 35.83 | 33.75 | 31.17 | 28.21 |
| Dec. | 1 | 34.43 | 32.18 | 37.15 | 35.34 | 32.07 | 29. 20 |
| *Jan. | 1. 1947 | 32.23 | 29.07 | 34.40 | 31.65 | 30.29 | 26.44 |
| Feb. | 1 | 35.22 | 33.00 | 37.91 | 36.07 | 32.82 | 29.91 |
| Mar. | 1 | 35.69 | 33.46 | 38.49 | 36.71 | 33.15 | 30.20 |

In the heavy manufactured goods industries, the co-operating factories showed an increase of 58 cents in the salaries-and-wages figure, and of 64 cents in the weekly earnings of the hourly-rated employees. In the non-durable manufactured goods industries, the average weokly earnings of the persons on salaries and wages at Mar. 1 advanced by 33 conts in the month, while those of the hourly-rated personnel rose by 29 cents. In the cmparison with Mar. 1, 1946, there were important increases in the weokly salaries and wages and in the wages of hourly-ratod personnel, there boing an advance of $\$ 3.40$ in the former and of $\$ 3.58$ in the latter category. In the durable manufactured goods industries, the gains in the year amount to $\$ 3.59$ in the case of the salaries and wages, and to $\$ 3.78$ in the case of the hourly wages. In this comparison, the salaries-and-wages figure in the non-durable manufactured goods division has advanced by \$3.17, and the hourly wages, by \$3.20. The following table gives the percentage increases in the indicated weekly earnings in the last 12 and the last 24 months.

* See footnote on page 2. $1 /$ Exclusive of electric light and power.

The similarity of the percentage increases in the last 12 months in the carnings of persons in recorded employment in the light and the heavy manufactured goods indulatries is an interesting feature of this comparison. The greater differsnces shown in the percentage increases in the weekly salaries and wages and the weehly earnings of hourly-rated wage-earners in the 24 months' comparison are due to several factors. Among these may be mentioned the fact that curtailment of war work particularly affected the heavy manufactured goods industries, while more plentiful supplies of labour and materials in the last two yoars have had a

Increases at Mar. 1, 1947 as compared with:-

Mar. 1, 1946 Mar. 1, 1945

beneficial effect upon the earnings in the light manufactured goods industries, in which the reduction in the average hours worked has boen smailer.
2. Non-kianuracturing Industries.

The proportions of the wage-earners in the non-manufacturing industries paid by the hour are not so large as in the manufacturing classes, with the result that records of the hours worked are frequently not kept with accuracy. The representation in the non-manufacturing industries in the monthly statistics of manhours and hourly earnings is therefore smaller than in the manufacturing division.

The situation in mining as a whole in the weok of Mar. 1 was greatly affected by the dispute in the Maritime coal fields. This factor was largely responsible for a decline of 17.6 poc. in the aggregate hours reported, which amounted to $2,321,055$ in the week of Mar. 1. The wage-earners at work declined from 65,043 at Feb. 1, to 53,178 at Mar. 1 , or by 18.2 p.c. On the other hand, the average hours in mining rose from 43.3 in the week of Feb. 1, to 43.6 in that of Mar. 1, as compared with 44.5 in the week of Mar. 1,1946 . The average hourly -arnings at Mar. 1 were also higher, standing at 95.1 cents, as compared with 94 cents a month earlier, and 86.4 cents in the weak of Mar. 1,1946 . In the local transportation group, (consisting chiefly of street and electric railways) there were moderate declines in the hours worked and in the number of hourly-ruted wageearners, but the aggregate weekly wages were rather higher. The average hours were unchanged, at 46.8 , but the average hourly rate advanoed from 81.1 cents at $F e b .1$, to 81.7 cents in the period under reviow, as compared with 70.7 cents at Mar. 1 , 1946. Greater activity was noted in building construction, in which the hours worked, the number of wage-earners and the weekly wages were higher than at Feb, 1. The average hours stood at 40.1 , as compared with 38.9 a month earlier, and 39.8 in the same week of last year. The average hourly rate was also higher, advancing from 87.6 in the weok of Feb. 1 , to 88.3 in that of Mar. $1,8.8$ compared with 83.1 at Mar. 1, 1946. In the highway construction and maintenance division, the averages of hours worked and hourly earnings were rather higher than was the case a month and a year earlier. Hotels and restaurants and laundries and drymeleaning establishments also indicated longer hours of work at Mar. 1 than in the week of Feb. 1, 1947, and there was a slight increase in the average hourly rates in these industries. The hourly earnings also averaged higher than at Mar. 1 of last year.

Provincial statistics of man-hours and average hourly earning in manufacturing as a whole in the period since June $1_{\mathrm{p}}$ 1945, are contained in Table 4, while Table 5 contains data for the industries empioying considerable numbers of hourlyrated workers.

In Nova Scotia, Manitoba and Alberta, the average hours worked by hourlyrated wage-earners in manufacturing as a whole were slightly lower at Mar. 1 than in the week of Feb. 1, but in the remaining provinces the latest averages were fractionally higher. In most cases, the changes were small, the increase of 1.4 hours in Saskatchewan being most noteworthy。 As compared with the week of Mar. 1, 1946, there were increases in the average hours indicated in manufacturing in New Brunswick and Saskatchewan; in Ontario, there was no general change, while in Nova Scotia, Quebec, Manitoba, Alberta and British Columbia there were reductions in the year in the average hours reported.

In all provinces, the average hourly earnings in manufacturing as a whole were higher at Mar. 1 than at Feb。1 1947 , or Mar. 1, 1946. The largest advances in the former comparison were those of 1.7 cents and 1.2 cents in Nova Scotia and British Columbia, respectively. In the 12 months comparison, the increases varied from those of four cents in Nova Scotia. (where the industrial distribution of the reported employees has undergone considerable change in the year), to 10.7 cents in Ontario and 12.1 cents in British Columbia. As has previously been pointed out, wagemrates have increased to an important extent in most industries in all provinces, but the general rise in manufacturing in the various areas is greatly influenced by the industrial distributions in the different provinces.

The number of hourlywrated wage-earners in manufacturing in the various provincos for whom statistics of man-hours and hourly earnings were available at the date under review were as follows:- Nova Scotia, 19,333; New Brunswick, 14,095; Quebec, 248 я919; Ontarío, 374,675; Manitoba, 27,200; Saskatchewan, 5,108; Alberta 14,306 and British Columbia, 51,530. These figures do not include the employees reported by central olectric stations.

## 4. Statistics for the Larger Cities.

Statistics of aversge hours worked and average hourly earnings in manufacturing as a whole in the larger citios in the last 22 months are given in Table 6, while Table 7 contains data for certain industries in these centres as at Feb. 1 and Mar. 1, 1947, and Mar. 1, 1946.

As has been stated in earlier bulletins, the variations in the average rates in manufacturing as a whole in the cities, as in the provinces, are partly, or largely, due to existing differences in the industrial distributions of the wageearners for whon statistics are avallable; the related sex distribution also constitutes important factor.

The average hours worked by hourlyarated personnel reported in manufacturing as a whole in Toronto, Hamilton and Vancouver were higher in the week of Mar. 1 than in that of Feb. 1, but in Montreal and Winnipeg, there was no general change in this comparison, As compared with the week of Mar, 1, 1946, there wers small declines in the average hours worked in Montreal. Toronto, Winnipeg and Vancouver, while in Hamilton the latest average of hours worked was rather higher than that indicated a year earlier.

The general average of hourly earnings in manufacturing in each of the
above hamed cities was higher in the week of Mar. 1 than in that of Feb, 1, the gains being siight. In the comparison with Mar. 1,1946 , there were increases in the averaqe hpurly earnings ranging from 7.6 cents in Montreal and in Winnipeg, and 9.6 cents in Toronto, to 11,7 cents in Vancouver and 12.5 cents in Hamilton.

The number of wage-arners in manufacturing in the cities for whom statistics of man-hours and hourly earnings were available in the most recent survey were as follows:- Montreal, 132,255; Toronto, 112,786; Hamilton, 39,341; Winnipeg, 24,363 and Vancouver, 23,186.

As has previously been mentioned, the general averages of hours worked by hourly-rated wage-earners in manufacturing as a whole are lower in Montreal. Toronto, Winnipeg and Vancouver than in the provinces in which these centres are situated. In Hamilton, the hours worked in the week of Mar. 1 were slightly longer than those indicated in Ontario as a whole. The average hourly earnings at Mar. 1 in Montreal and Hemilton exceeded the provincial means. In Toronto, the average of 80.7 cents was the same as the Ontario figure, but in Winnipeg and Vancouver the average hourly rates at the date under review were rather lower than those in Manitoba and British Columbia, respectively.

The following table shows the average weekly earnings of the hourly-rated personnel reported by the co-operating manufacturers in certain centres at Mar. 1 and Feb. 1, 1947, and Mar. 1, 1946.

| Mar. 1 | Feb. 1 | Mar. 1 |
| :---: | :---: | :---: |
| 1947 | 1947 | 1946. |
| \$ | \$ | \% |

| Montreal | 32.05 | 31.79 | 30.06 |
| :--- | :--- | :--- | :--- |
| Toronto | 33.01 | 32.40 | 29,51 |
| Hamilton | 36.55 | 35.82 | 30,85 |
| Winnipeg | 32.37 | 32.33 | 29.90 |
| Vancouver | 36.99 | 35.84 | 33.86 |

In each of these cities, the wooky earnings of the wage-earners for whom statistics of man-hours and hourly earnings are available were higher at the date under review than was the case a month or a year earlier; in the latter comparison, the increase in Montreal amounted to 6.6 pocoj in Toronto, to $11.9 \mathrm{poc.j}$ in Hamilton, to 18.5; in Winnipeg, to 8.3 p.c., and in Vancouver, to 9.2 p.c. The general advance in manufacturing in the Dominion in the same comparison amounted to 12 p.c. The unusually high increase in Hamilton is associated with the employment of above-average proportions of workers in the heavy manufacturing industries in that city.

Table 3.- Average Hours and Average Hourly and Teekly Earninga of Nape-Earrurs for whom Duta are Available at. Mar. 1, 1947. With Compurative Fipures for Fob. 1, 1947, and Mar. 1, 1946.
(The latest fimares are subjact tor revision).
