AND

AVERAGE HOURLY EARNINGS

## AS REPORTED

## AT THE BEGINNING OF

JULY, 1947

## EXPLANATION OF THE TERMS USED IN THIS REPORT.

Wage Earnerso Employers are asked to furmish statistics on mandohours on behali of those wage earners for whom they keep a-record of aggregate hours, worked, so that the data relate, in the main, to persons employed at hourly rates. laformation for salaried employees is puxposely exsluded, while in many cases. statistics of man-hours are not available for certain classes of wage earners, whose earnings. like those of mostisalaried employees, are notidirectly dependent upon the mumber of houxs worked examples of wage earnexs frequently excluded are route dxiver*, piece workexs in many but not all estabilshments, truok men, etco In additions some employers do not kaep a redord of manchours for any classes of emgicyees. Aceordirgly, the number of workexs for whom statistics are given in the present buldetsa is smaler than the total number of employees. (salaried personnel and wage-earners) fore whom statistica of omployment and payrolls are obtained in the monthly sureys-on these subjects the results of these surveys are published in the monthly bulletins on eraployment and payrolls, which also contain data relating to the sex distitibution of the woxkers in recorded employment.

Mans Houre The statistics of manchouxe include overtime as well as the houre worked by part-time and casual workerso Houxis credited to persons absent on leave with pay in the reported pay period are includedin the statistics as though the houte for which payment wa mado has beon worked.

Wagero - The wages reported represent grons easnings before deductions are made for faxes, unemployment insurance, eto. they do not, however, include the valuo of buard and lodging which in sone cases is part of the remunerathon of workers. Incentive and producticn bonuse and overtime payments are inoluded, as are sums paid employees absent on leave with pay during the pay period for which statistics are given。 The rigures of average weakly wages result from the multificcation of the average hours worked during the period of observation, by the arerage hourly earninges ropostod in the same period.

Pay Perzodso Statistics of man-hours and hourly wages reported for periods exceedsag one weak in duration are reduced by the appropriate proportions to obtain for tabulation purpases the number of hours worked and the hourly earnings in one weok in the indicated pay period suak information is then added to the data furatshed by employers who pay on a weokly basis. 80 that. in all caser. the tisbilated data zepresent the situation, in one weok in each month.

1. Manufacturing.

There was a considerable increase in the number of hourly-rated wage eearners employed by leading manufacturers at July 1 . when the adrance was the sixth in as many months. The aggregate hourly earmings also showed an upward movement. On the other hand, there was a decline in the total of hours worked by these wage-earners, partly as a result of holidays, and partly due to the indicated changes in the distribution of employment. The 6,369 establishments frurnishing data on man-hours and hourly earnings to the Dominion Bureau of Statistics reported 774,758 hourlyrated employees working a total of $32,601,306$ hours in the weok ending July 1 , for which they were paid the sum of $\$ 26,327,349$. In the week of June $l_{0}$ these firms had employed 764,903 hourly-rated wage-arners, whose working time totalled 32,803,965 hours for which they were paid $\$ 26,194,420$. There was accordingly an increase of 1.3 poc. in the reported wage earners, accompanied by that of $0.5 \mathrm{p}, \mathrm{c}$. in the hourly wages, but the hours were reduced by 0,6 poc. Increases in the wage rates paid workers in several industries contributed to the higher aggregate of weokly wages.

The average hours worked in the cowoperating factories fell from 42.9 in the week of June $l_{\text {, }}$ to 42.1 in that of July $l_{n}$ as compared with 42.4 and 44.3 at July. 1 in 1946 and 1945 , respectively. The average hourly earnings reported in the period under review stood at 80.8 cents exceeding the previous high figure of 79.9 at June 1, 1947. At July 1 in 1946 and 1945, the averages had been 70 cents and 70.1 cents, respectively. As stated aboven a factor in the higher hourly rate indicated in the latest survey as compared with a month earlier was the increase of wage-rates in several industriess in the comparison with July 1 of last year, there were widespread increases in the rates.

The weekly wages of the wage-earners for whom data were available at July 1 averaged $\$ 34.02$, the slight loss as compared with the mean of $\$ 34.28$ at June 1 being due to lowered working time. At July i in 1946, the weekly figure was \$29.68, and that at July $1,1945, \$ 31.05$, respectively. The average weokly wages of the hourlyrated wage-earners employed by the co=operating manuiacturers showed an advance of 14.6 poco. in the 12 months comparison, and of 9,6 poc. in the 24 months comparison.

Hours Worked. - The aggregate hours worked by the hourly-rated wage-earners reported by loading manufacturers at July 1 aggregated $32,601,306$, a total which was 0.6 p,c, below that of $32,803,965$ indicated for the weak of June 1 . There were increases in the total hours worked in the animal and vegetable food, lumber, pulp and paper, beverage, electrical apparatus, petroleum and a few other classes. On the other hand, there were declines, largely seasonal in character, in the totals of hours reported in leather, rubber, textile, tobacco, chemical, iron and steel, nonferrous metal and some other categories. The observance of St, Jean Baptiste Day in the province of Quebec was also a contributing factor in the decrease in many industrieso

The hours worked in the factories from which data were received in the durable manufactured good division taken as a whole in the week of July 1 totalled 16.500.132; this was leas by 0.2 pothaghat of $16,539,015$ reported a month earliere In the light manufacturixy division, the hours were given as $16_{8}^{*} 101,174$ as compared with $16,264,950$ reported by the same eatablishmenta for the week of June $1_{0}$ there was a falling off of 0.1 poc.

The statistics of average hours worked and average hourly earnings in manufac= turing in the period for which data are available are sumarized in the following table:-

TABEE 1. - AVERAGE HOURS WORKED AND AVERAGE HOURLY EARNINGS OF HOURLY $\quad$ RATED TAGE -EARNERS IN MANUFACTURING AS A WHOLE AND IN THE MANUFACTURE OF DURABEE GOODS AND OF NON-DURABEE GOODS.

* The averages at these dates were affected by loss of working time at the year-and holidays in the case of Jan. $1_{0}$ and by the Easter holidays in the case of Apr. $l_{0}$ 1945. and May 1. 1946 .

The hours worked in the weok of July 1 by the wagewearners in all reporting manufacturing establishments averaged 42.1 , as compared with 42.9 in the weok of June $1,1947,42.4$ in the week of July $1_{0} 1946$, and 44.3 in the week of July 1,1945 , when overtime work had been of considerable importance. Employees in plants turning out heavy manufactured goods were reported as working an average of $42_{6} 5$ hours, as compared with 43 hours in the week of June $l_{0} 1947,42.8$ hours in the week of July $l_{0}$ 1946, and 45 hours in that of July $l_{\text {, }} 1945$. In the light manufactured goods industries, the indicated hours averaged 41.7, as compared with 42.7 at June 1, 1947; at July 1 in 1946 and 1945, the averages were 42.1 and 43.3 hours, respectively.

Hourly Earnings: The amounts oarned by the reported hourly m rated wageooarners at July l were given as $\$ 26,327.349$. This total was greater by 0.5 poco than the sum of $\$ 25,194,420$ indicated by the same manufacturers at June 1 . The cowoperating firms classed in the durable manufactured goods division distributed $\$ 14,318,200$ in weokly wages to their hourly-rated employees, an aggregate which exceeded by 0.5 poc. that recorded for the weok of June 1,1947 . In the nonedurable manufactured goods industries, the reported wages showed an increase of 0.6 poco. the July 1 figure being $\$ 12,009,149$. The paynent of increased wage rates in a number of industries in the light and the heavy manufacturing industries were reflected in the higher woekly wages reported, despite the declines in the hours worked in the week of July 1. The average hourly earnings in manufacturing as a whole showed a further advance, in an upward movement which goes back to Mar. 1. 1946, practically without interruption. The latest figure was 80,8 cents, as compared with 79.9 cents at June 1, 1947, 70 cents at July 1, 1946, and 70.1 cents at July $1_{0} 1945$. In the last 12 months, the average rate has risen by $15.4 \mathrm{p} \cdot \mathrm{Co}$; the increase in the last two yoars amounts to 15,8 p.O.

The roported hourly earnings in the durable manufactured goods industries averaged 86.8 cents at the date under review, as compared with 86.2 cents at June $1_{0}$ 1947. 75.7 oonts at July 1. 1946 , and 77 cents at July $1_{n} 1945$. Within this category, there were small increases in the month in various branches of the lumber, clay, glass and stone, electrical apparatus, iron and stoel. and nonoferrous metal industries. The smelting and refining of non-ferrous ores showed the largest increase, of over nine cents, bringing the hourly rate at the first of July to 99.9 conts.

In factories producing non-durable manufactuied goods the hourly earnings reached a new maximum at July 1 , when the rate was 74.6 cents. At the beginning of June, the average was 73.4 cents; at July 1 in 1946 and 1945, the means were 64.1 cents and 61.2 cents, respectively. The increase in the 12 months amounted to 16.4 Foco, and that in the 24 months, to 21.9 poco As compared with the June 1 averages, there were increases in a considerable number of groups, notably in pulp and paper, paper products, vegetable food, rubber, tobacco, beverage and chemical factories.

Average Weekly Wages.- As has been pointed out in proceding bulletins, statistics on manchours and hourly earnings are not available for all classes of wage-earners, but only for those workers for whom employers keep accurate records of hours worked, such workers being mainly those who are paid by the hour? in general, this restriction results in the exclusion of salaried personnel. Among the classes of wage-earners for whom satisfactory records of hours worked are frequently not available are pieceworkers in some but not all establishments, routeodrivers, delivery men, eto. It may be noted that many fims state that the earnings of their wage-arners paid at other than hourly rates exceed those of their hourlyarated personnel; this is particularly the case among pieco-workers. In general, however, the wage-earners for whom statistics are given in the present bulletin form important proportions of the total personnel of the coooperating establishments. At the beginning of July, the wage-earners for whom information on manchours and hourly earnings were available made up $75.4 \mathrm{p} \cdot \mathrm{c}$ o of the total number of persons of all
categories on the payrolls of the manufaturers /furnishing monthly statistics on employment and payrolls at the same date; in the heavy manufactured goods division. the proportion was 79 p.cos and that in the light manufactured goods division, 72 poc.

Table 2 shows the fluctuations in the average weokly earnings of salaxied eraployees and wage earners in the period comencing at Nov. $l_{0} 1944$, and those in the weekly earnings of hourly-rated wage earners; the latter figures are obtained by multiplying the average hourly earnings in the weak of observation by the average hours worked in the sane week. As compared with June 1 . 1947 , there was at the beginning of July a seasonal declino of 20 cent $s$ in the weokly salaries-andawages figure in manufacturing as a whole, as compared with that of 26 conts in the weokly earnings of hourlyorated personnel.

TABLE 20. AVERAGE WEEKLY SALARIES AND WAGES. AND AVERAGE WEEKLY WAGES OF HOURLYRATED WAGE-GARNERS AS REPORTED IN MANOFACTURING AS A WHOLS: AND IN THE MANUFACTURE OF DURABEE GOODS AND OF NON.DURABEE GOODS.

| * | $\begin{gathered} \text { All } \\ \text { Manufatures } 2 / \end{gathered}$ |  |
| :---: | :---: | :---: |
| Week | Average Wee |  |
| Precoding | Salarios \& Wagos | Wages |

Durable Manufactured
Goods
Average Teekly
Salaries \& Wages Wages

Non-Durable Manufactured Goods

Averago Weokly Salaries \& Wages Wages

The weakly earnings of the salaried employees and wage oearners employed by the co-operating manufacturers of durabla manufacturad goods at July 1 showed a $108 s$ of 22 cents, while the reduction in the wages of the hourlysrated staff in the month amounted to 18 cents. In the light manufactured goods industries, the average weekly eamings of the workers on selaries and wages at July 1 foll by 16 cents as oompared with June 1. while those of the hourly=rated personnel advanced by 23 cents.

In the last 12 months, the weekly salaries and wages figure in manufacturing as a whole has risen by $\$ 4.11$, while the wages of the indicated hourly-rated workers have advanced by $\$ 4.34$. Plants tuxning out heavy manufactured goods reported a rise of $\$ 4.30$ in the earnings of their salaried emp? oyees and wage-arners, and of $\$ 4.49$ in the case of the wagerearners for whom records of hours wooked are kept. In the non-durable manufactured goods industries the salaries-and wages figure has advanced by $\$ 3.93$, and the hourly wages, by $\$ 4.12$ in the months since July $1_{0}$ 1946。 The following are the percentage increases in the indicated weokly earnings in the last 12 and the last 24 months s-

| All Manufiacturing | 12.8 | 14.6 | 10.4 | 9.6 |
| :--- | ---: | ---: | ---: | ---: |
| Durable Manufactured Goods | 22.5 | 13.9 | 7.4 | 6.5 |
| Non-Durable Manufiactured Goods | 13.0 | 15.3 | 26.5 | 17.4 |

In the comparison with a year ago, the latest figures of hourly wages show increases which slightly exceed those in the more general figures of salaries and wages. In the comparison with July 1 of 2945 , however, the figure of average weekly salaries and wages in manufacturing has advanced rather more than the wages paid hourly-rated wagesamers. This is alse the case in the heavy manufactured goods industries, partly a reflention of reduced overtime work at promium rates for wage earners, while the relaxation of controls on salarios has aliso had an effac\% The employment of smaller numbers of salaried worke:s is a fu:ther factoro In the light manufactured goods division, on the other hand, the ayerage hourly rate showed an increase of 1704 poco at July $1_{0} 1947$, over that date in 1945 a as compared whth a "ise of 16.5 p,ce in the combined salaries-and-wages figure in the same periodo

## 2. Non-Manufacturing Industroies.

The propotsus of wage-9amers in the non-manufacturing industries paid by the hour are smaller than in the case of the manufroturing industries, and as a result, records of hours worked are frequently not available for such personso Thus the representation in the non=manufacturing industries in the monthly statistios of man-hours and hourly earnings is smaller than that in the manufacturing divisiono

With more normal operations in the coal fields of Now Scotia following the settlement of the longedrawn out strike there was a considerable in moase in the number of wage -oamers, in the aggrogate hours and the weokly wages roported in coal mining in the Dominion as a whole at the beginning of July, The average working time rose from 30,7 in the weok of June 1 to 37,6 in that of July $i_{8}$ as compared with 40,1 at July 1, 1946; the latest average hourly rato in the industry was j09. 8 eents, as compared with 112.7 conts at June 1 , when the situation was still abnozmai as a result of the dispute. The average at July $l_{s} 1946$, was 95,4 cents, and that at the same date in 1945, 93.6 onts. In the motalilis are dimssicn the number of wageo earners reported was amaller than at June $1_{0}$ and there was also a deciine in the
aggregate and average hours，but the weakly wages showed an increase，as did the hourly rate．The latter advanced from 97.8 cents at Jume $1_{0}$ to $\$ 1.02$ at July 1 ，as compared with 88.8 cents a year ago．Inoreased wageasates in certain divisions of the metallic ore mining industries were peflected in the latest hourly average．

Firms in the locel transportation group．（consisting chiefly of street and electric railways），indicated a sman increase in the number of hourlyorated wageo earners together with advances in the houres wowed and in the hourly earnings，as compared with a month easelierg the hourly rate pose from 83.9 cents at June 1 o to 84.2 cents at the first of July．In the building construction group，there were considerable additions to the reported staffe of hourlyarated wage oearners，but the working hours averaged rather luwer，at 38.5 hours in the week of July $l^{2}$ as compared with 39.1 hours in the week of Juse 1 。 The average hourly rate was then 90.9 cents， slightly higher than that of 90.5 cents ot July $1 ;$ the frambional decline was due to the employment of larger numbers of casual workors，and of others taken on at the lower rates of payo A year eariferg the man was 820．e cents，while that at july 1 ． 1945，was 79.8 cente an houlo Employmant in the highway construction and maintenance division also increased considerably，while the average hours worked rose from 37.4 in the week of June it to 38.7 in that of July ${ }^{2}$ a as compared with 38.5 hours a year earlier．The average houriy earnings in this industry stood at 7lal cents，slightly lower than the mean of $7 \lambda .3$ conts at july $l_{\text {a }}$ but was decidedly higher than that of 64.7 cents at July $l_{8} 1946$ 。 Small dealines were recorded in the average hours worked in the cooperating laundries and drycoleaning establishnents，and in hotels and restaurants both of these industries also reported minor increases in the average hourly earnings at July l as compared with June $\mathrm{l}_{0} 1947$ ．while the hourly rates therein also exceeded those indicated at Juty 1 in 1946 and 1945．

3．Provinoial Statistics for Leading Industries．
Provincial statistics of manohours and average hourly earnings in manufacturing as a whole in the period since July $I_{\text {日 }} 1945$ o are contained in Table $4_{0}$ ，while Table 5 contains data for the industries employing considerable numbers of hourly rated wage－earners in the various provernen．

In Nove Scotia and Lanitoba，the avarage hours worked by hourlycrated wage earners in manufacturiag as a whole were alightly higher in the weok ending at July 1 than in that of june 1。 In Ontarion there was no general change in the indicated working time，while the hours reported in the remaining provinces were slightly lower， partly due to the holiday season，and partly to seasonal changes in the industrial distribution of the workeps for whom data were available．The most marked change was In Quebec，where the observence of St。 Jean Baptiste Day caused a decrease of 204 hours．In comparison with the average hours reported in the week ending July $l_{n}$ 1946， there were decreases in New Bxunswiok，Quebec，Ontaric，Saskatchewan and British Columbia，with increases in Nova Scotia，Manitoba and Alberta。 In all cases，the changes were very slight．

Manufacturers in all provinces reported small advances in the average hourly earnings at July $l_{0}$ as compared whth June $l_{\text {．The largest increases were those of } 102}$ cents an hour in Quebec and Britysh Columbia。As compared with the week ending July 1,1946 ，there were large increases in the general average hourly earnings in manufacturigg in all provinces，as followsqn Nova Scotia， 6.9 centss New Brunswick， 9．5 cents \＆Quebec． 806 cents；Ontario 12.5 centss Manitoba， 9.4 cents； Saskatchewan．11． 1 cents，Albextia，801 cents and British Columbia，11．3 cents． While wrgearates have advanced to an important extent in most industries throughout the coumizy，the general rise in manufacturing in the various provinces is materially affected by the industrial distributions therein．

The number of hourlyorated wagecearnexs in manufacturing（exclusive of central
electric power stations) in the different provinces for whom statistics of man-hours and hourly earnings were available at the date under review together with their average weokly earnings at July 1 and June 1。1947, and July 1 in 1946 and 1945 are shown belowst

| Province | Hourly-Rated Fage Earners reported at July 1. 1947 | Weokly Wages |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |

| British Columbia | 54.814 | 37.92 | 37.92 | 34.73 | 34.69 |
| CANADA. | 774.758 | 34.28 | 34.02 | 29.68 | 31.05 |

## 4. Statistics for the Larger Cities.

Statistics of average hours worked and average hourly earnings in manufacturing as a whole in the larger cities in the last 24 months are given in Table 6 , while Table 7 contains date for cortain industries in these centres as at June 1 and July 1, 1947, and July 1, 1946.

As has previously been stated, the variations in the average rates in manufacturing as a whole in the cities, as in the provinces, are partly, or largely, due to the differences which are found in the industrial distributions of the wageearners for whom statistics are available; the related sex distribution is another important factor contributing to the differences.

The average hours worked by hourly-rated personnel reported in manufacturing as a whole in Montreal and Vancouver were lower in the week of July 1 than in that of June 1; in the former, the decline was largely due to the observance of the St, Jean Baptiste holiday. The holiday factor also entered into the situation in Vancouver, In Toronto, Hamilton and Winnipeg, the averages were slightly higher than in the week of June 1, 1947. In Montreal. Toronto and Vancouver, there were slight reductions in the working hours as compared with the weok of July 1, 1946, but in Eamilton and Winnipeg small advances were indicated in the 12 months.

Except in Hamilton, the average hourly eamings reported in manufacturing as a whole in each of the cities for which data are given in Table 6 , were rather higher at July 1 than at the beginning of June。 There were increases of 102 cents in Montreal and 1.3 cents in Winnipeg, while the advances in Toronto and Vancouver were fractional. As compared with July 1. 1946, there were general rises in the average hourly earnings within the leading cities, the gains boing as follows:Montreal, 12.3 poa.3 Toronto, 16.9 poco; Hamilton, 17.2 poso; Winnipeg, 13.0 $p_{0} c_{0}$ and Vancouver, 13.5 pos. A comparison with the increase indicated in the year in manufacturing in the provinces is interesting; thus, in quebec as a whole, the everage hourly earnings at July 1. 1947, exceeded by 13.2 pos. the figure indicated a year earliers in Ontario, the gain amounted to 17.5 poco; in Manitoba, to 13.3 poso, and in British Columbia, to 13.3 poso

The table on the following page gives the average weekly earnings of the
hourly-rated personnel reported by the cowoperating manufacturers in certain leading centres at June 1 and July 1: 1947, and July $1_{8}$ 1946.

| City | Hourly Rated Wage Earners reported at July 1. 1947 | Weokily Wages |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  | July 1 | June 1 | July 1 |
|  |  | 1947 | 1947 | 1946 |
|  | NOc | \% | \$ | \$ |
| Montreal | 130,157 | 32. 47 | 32.50 | 28.29 |
| Toronto | 112,321 | 34.07 | 33.70 | 29.27 |
| Hamilton | 39,233 | 37.41 | 36.42 | 30.90 |
| Winnipeg | 24.678 | 33.50 | 32.87 | 29.58 |
| Vancouver | 23.712 | 36,58 | 37.29 | 33,29 |

The weekly wages of houriymprated empioyees in manufacturing establishments in each of the above cities showed increases at the date under revien as compared with a month and 12 months earlier. In the yearp the advance in Montroal amounted to $11.2 \mathrm{poon}_{0}$ in Toronto, to 16,4 pocon in Hamilton, to 21.1 pos , in in Winnipege to 13.3 pocon and in Vancouver to 9.9 podo The general rise in manuiacturing throughout Canada in the 12 months anounted to 14.6 poco at suly $l_{0}$ when the wokly figure stood at $\$ 34.02$ 。

Table 3.-Averago Hours and Averaga Hourly and Woakly Rarmings of Wape-県arnare for whom Data are Available at July 1, 1947, With Compurative Figures for June 1, 1947, and July 1, 1946.
(The latest figures are subjeot to revision).
