## AVERAGE HOURS WORKED

## AND

AVERAGE HOURLY EARNINGS

## AS REPORTED

AT THE BEGINNING OF

AUGUST, 1947

Wage Earmars = Employers are esled to furnish statisties on manhours on behalt of those wage matmess for whon they keop a record of agyeggase hou:s wo:ked. so that the data relate, in the mains to peruons employod at hourly rates. Information for salariod employees is purposely excluded. while in many aasos, statistios for man-hours are not available for certain classes of wagesoarnerg, whose earnings, like those of rost salaried employees are not directly dependent upon the number of hours worked: examples of wage woarners frequently excluded are route drivers, piece workers in many but not all establishments, truck men, etco In addition, some employers do not keep a record of man whours for any classes of employees, Accordingly, the number of workers for whon statistics are given in the present bulletin is smaller than the total number of employeos. (salaried persomel and wagemoarners) for whom statistics of empleyment and payrolls are obtrined in the monthly surveys on these subjects; the results of these surveys are published in the monthly bulletins on omployment and payrolls, which also contain data ralating to the sex distribution of the workers in recorded employment.

Man-lloury = The statistics of mannhours include overtime as well as the hours worked by part-tlme and sasual workers. Hours credited to persons absent on leave with pay in the recorded pay period are included In the statistics as though the hours for which payment was made has beon worked.

Wages. . The wages reported represent gross earnings before deductions are made for taxes, uneraployment insurance, $\epsilon^{n}$; they do not, howevor, include the value oh boned and lodging which in some cases is part of the remuneration of workers. Incentive and production bonuses and overtime payments are included, as are sums paid omployees absont on leave with pay during the pay period for which statistics are given. The fifures of average weekly wages result from the multiplication of the average hours worked during the period of observation by the overage hourly earnings reported in the same period.

Pay Periods - Statistics of man-hours and houriy wages reported for periods exceeding one week in duration are reduced by the appropriate proportions to obtain for tabulation purposes the number of hours worked and the hourly earnings in one week in the indicated pay period; such infornation is then added to the date furnished by employers who pay on a weekly basis: so thats in all cases ; the tabulatod data ropresent the situation in one wook in each month.

## 1．Manufacturing．

The munbar of hourly－tated wage－arners reported by leading manufacturers at Sago 1 showed a further increase of 0.7 poco，accompanied by an advance of 1.7 $\mathrm{p} \cdot \mathrm{C}$ ，in the aggregate hours which they worked in the weok preceding，and of 2.3 poc．in their weekly wages．Data were received by the Dominion Bureau of Statistics from 6，354 plants which indicated a staff of 780,234 persons paid by the hour，working a total of $33,118,949$ hours in the week ending Augo $i_{0}$ for which they were paid the sum of $\$ 26,927,150$ ．In the week of July $l_{0}$ these firmas had had 774,805 hourly－rated amployees，whose working time was given as $32,574,510$ hours for which they received 825．3210426。

The average hours worked in the comperating factories rose from 42 in the woek of july $l_{p}$ to 42.4 in that of Aug． $1_{\text {，}}$ as compared with 43 and 44.3 at Aug． 1,1946 and 1945 ，respectively．The wages reported in the period under review averaged 81.3 cents per hour，the highest in the record，which goes back only to Novo l． 19440 Previously，the maximum figure wes that of 80.8 cents at July 1,1947 ．At Auge 1 in 1946 and 1945 ，the averages had been 70 cents and 69,5 cents，respectively．Furthor sdvances in the wage rates in several industries contributed to the higher average generally indicated in manufacturing in the most recent survey．

The weekly wages of the wage－arners for whom data were available at Aug．I nvernged $\$ 34.47$ ，as compared with $\$ 33.94$ in the week of July $l_{\text {，}} \$ 30,10$ at Aug． 1 ， 1946，und $\$ 30.79$ at Aug。1。 1945．Thus the average weekly wages of the hourly－rated WFgecearners employed by the womperathng manufacturers showed increases amounting to $24.3 \mathrm{p} w .0$ ．in the it mantist somparisong and to 22 poco in the 24 months＇comparison．

Houzs Worket．－The hotios worked by the hourlyorated wage－ermers employed by loadirg manuiacturers at Aug， 1 aggrogated 33.218 .949 a total which was 1.7 poc． above that of $32,574,510$ reported for the week ending July 1 ．There were considerable increases in the hours stated as having been worked in the animal and vegetable food， 2umber，pulp and paper，text11e，teverage，clay，glass and stone，tobacco，petroleum and certain other classes．The trend was downards however，In the aggregate hours raported by manufacturers of eloctrical apparatua，chemical and iron and steel producta． In most cases，the indicated charges were seasonal in character，frequently being assoniuted with the holiday factor．

The hours reported by plants turning out heavy manufactured goods in the week of Auge 1 aggregated $16,603,266$ a figure exceeding by 0,6 poce that of $16,507,314$ indicated la the July i data from the same fimbs．In the non－durable manufactured
goods division, the hours were given as $16,515,683$; this was greater by 2.8 p.c. than the total of $16,067,196$ worked by persons employed in the sana plants in the week of July 1. The increase in both categories, but particularly in the light manufacturing division, was due in part to the resumption of operations on a more usual scale in Quebec following the St. Jean Baptiste holiday which had fallen in the preceding period of observation.

The statistics of average hours worked and average hourly earnings in manufacturing in the period for which data are available are sumarized in the following table:-

TABLE 1.- AVERAGE HOURS WORKED AND AVERAGE HOURLY EARNINGS OF HOURLY-RATED WAGE-EARNERS IN MANUFACTURING AS A WHOLE AND IN THE MANUFACTURE OF DURABIE GOODS AND OF NON-DURABLE GOODS.

| Week <br> Preceding | All Average Hours Worked |  |  | All Average Hourly Earnings. |  |  |  |

The hours worked by wage-earners employed by the comoperating manufacturing plants in the week of $\begin{aligned} & \text { ing. } 1 \text { averaged } 42.4, ~ a s ~ c o m p a r e d ~ w i t h ~\end{aligned} 2$ in the week of July 1, 1947, 43 in the weok of Augo 1, 1946, and 44.3 in the week of Aug. 1 , 1945, when overtime work had been in greater volume. Wage-earners reported in factories producing durable manufactured goods were stated as working an average of 42.6 hours, as compared with 42.5 hours in the week of July $1,1947,43.2$ hours in the week of Aug. 1,-1946, and 44.7 hours in that of Aug. 1, 1945. In the non-durable manufactured goods division, the indicated hours gave an average of 42.3 per wagemearner, as compared with 41.6 at July 1, 1947, 42.8 at Aug。 1,1946 , and 43.7 at Augo 1,1945 .

Hourly Earnings. - The weokly earnings of hourly-rated wage-earners reported in manufacturing at Augo 1 were stated at $\$ 26,927.150$. This was greater by 2.3 poco than the sum of $\$ 26,321,426$ disbursed in hourly wages by the same manufacturers in the week of July 1. The respondents classed in the durable manufactured goods division disbursed a total of $\$ 14,567,705$ in woekly mages among their hourly-rated personnel; as compared with the sum of $\$ 14,320,776$ which they had distributed in the weok of July 1, there was an increase of 1.7 p.c. Firms in the non-durable manufactured goods industries reported weokly wages aggregating $\$ 12,359,445$, an amount which exceoded by three poce their July 1 total of $\$ 12,000,650$. As already indicated, the payment of higher rates in several industries in the light and the heavy manufacturing industries was a factor contributing to the larger wage payments reported at the date under review, when the longer working time also contributed to the increases. The hourly average earnings in manufacturing as a whole showed a further advance, to 81.3 cents, the maximum in the record, whiah goes back only to Nov. 1, 1944. The previous high figure was that of 80.8 cents indicated at July l, while at Augo 1 in 1946 and 1945, the hourly averages were 70 cents and 69.5 cents, respectively. In the last year, the average rate per hour has risen by 16.1 p.c., and in the 24 months, by 17 p.c.

The reported hourly earnings in the durable manufactured goods industries averaged 87.7 cents at the date under review, as compared with 86.8 cents at July 1 , 1947, 75.8 cents at Aug. 1, 1946, and 76.9 cents at Aug. 1, 1945. In this class, small increases were indicated as compared with July 1 in several branches of the lumber, clay, glass and stone, electrical apparatus, iron and steel and non-ferrous metal industries. The largest rise was in the lumber division as a whole, in which the hourly rate advanced by 1.8 cents in the month, to 74.5 cents at the first of August.

In the production of light manufactured goods, the reported hourly earnings, at 74.8 cents, were slightly higher then at July 1 , previously the high figure in the rocord. The mean at the first of August in 1946 was 64.4 cents, and that in 1945, 60.7 cents. In the 12 months, the increase amounted to 16.1 poc.o and that in the 24 months, to 23.2 poc. As compared with the July laverages, there were advances in a considerable number of groups, notably in rubber, textiles and beverages. There were very general increases as compared with Augo 1 of last year.

Average Weekly Earningsoo As has been pointed out in preceding bulletins, statistics of man-hours and hourly earnings are not available for all classes of wage -oarners, but only for those workers for whom employers keep aocurate reoords of hours worked, such workers being mainly those who are paid by the hour; in general, this restriction results in the exclusion of salaried personnel. Among the classes of wage-earners for whom satisfactory records of hours worked are frequently not available are pleceworkers in some but not all establishments, routeodrivers, delivery men, etc. It may be noted that many firms state that the earnings of their wageearners paid at other than hourly rates exceed those of their houriy-rated personnel; this is particularly the case among piece-workers. In general, however, the wageearners for whom statistics are given in the present bulletin formi important proportions of the total personnel of the coooperating establishments. At Aug. 1 , the wage-earners for whom information on man-hours and hourly earnings were available made
up 75.3 p.c. of the total number of persons of all categories on the payrolls of the manufacturersl/furnishing monthly statistics of employment and payrolls at the same date; in the heavy manufactured goods division, the proportion was $78.9 p_{0} c_{0}$, and that in the light manufactured goods division, 72 poco

The following table shows the incroases indicated at Aug, 1, 1947, as compared with the same periods in 1946 and 1945 , in the weekly salaries-and-werges figures and the weekly wages in the reporting manufacturing establishments generally, and in oertain broad categories of manufacturing:-

TABLE 2.- AVERAGE WEEKLY SALARIES AND WAGES, AND AVERAGE WEEKLY WAGES OF HOURLYRATED WAGE-EARNERS AS REPORTED IN MANUFACTURING AS A WHOLE, AND IN THE MANUFAETURE OF DURABEE GOODS AND OF NON DURABES GOODS.

1/That is, of establishments ordinarily employing 15 persons and over. Soe the monthly bulletins on Employment and Payrolls.
2/Exclusive of electric light and power. * See footnote on page 2.

Table 2 shows the fluctuations in the average weskly earnings of salaried employers and wage-earners in the period comaencing at Nov, 1, 1944, and those in the weokly earnings of hourly-rated wageearners; the latter figures are obtained by multiplying the average hourly earnings in the weak of observation by the average hours worked in the same week. As compared with July 1, 1947, there was a rise of 51 cents in the weokly salariesmand wages figure in manufacturing as a whole at the first of August, as compared with that of 53 cents in the weekly earnings of the reported hourly-rated personnel. In the heavy manufactured goods industries, the indicated weekly salaries-and-wages figure advanced by 57 cents at Augo 1 , when the reported weakly wages were higher by 47 cents than at July 1 . In the nondurable manufactured goods division, the average weekly earnings of the persons on salaries and wages were increased by 47 cents in the month, during which the weekly earnings of the hourlywrated staffs of the cowoperating establishments rose by 56 cents.

Industrial Division

All Manufacturing<br>Durable Manufactured Goods<br>Non-Durable Manufactured Goods

| August 1, 1946 |  |  |  | August. 1, 1945 |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Salaries and Wages |  | Weokly <br> Wages |  | Salaries and Wages |  | Weekly <br> Trages |  |
| $\$$ | p.a. | \$ | p.c. | \$ | poc. | \$ |  |
| 4,32 | 13.3 | 4.37 | 14.5 | 4.20 | 12.9 | 3.58 | 12.0 |
| 4.56 | 13.5 | 4.51 | 14.1 | 3.61 | 10.1 | 2.99 | 8.7 |
| 3.97 | 12.9 | 4.08 | 14.8 | 5.32 | 18.1 | 5.11 | 19.3 |

In comparison with Aug. 1 of last year, the latest flgures of hourly wages show rather larger percentage increases than were reported in the more general figure of salaries and wages. Since Auf. 1, 1945, however, the average weekly salaries and wages in manufacturing have advanced to a rather greater extent than the weekly wages of hourly-rated wage-earners. This is also the case in the heavy manufactured goods industries, where curtailment in premium overtime work for wage-earners has been a factor of considerable weight, while the relaxation of wartime controls on salaries has had a buoyant effect upon the eamings of persons in that category; another factor no doubt is the employment of smaller numbers of salaried workers. In the nondurable manufactured goods division, on the other hand, the average weekly wages of hourly-rated wage-earners showed an increase of 19.3 poco at Aug. 1 , 1947, as compared with the same date in 1945; since then the rise in the combined salaries-and-wages figure has amounted to 18.1 pos。

## 2. Non Manufacturing Industries.

The proportions of wagemearners in the nonmenufacturing industries paid by the hour are smaller than in the case of the manufacturing industries, with the result that records of hours worked are frequently not avallable for such persons. Thus the representation of the non-manufacturing industries in the monthly statistics of man-hours and hourly earmings is smaller than in the manufucturing division.

There was a further increase in employment in the extraction of coal at Aug. 1 . when the aggregate hours and earnings were also higher. The average working time advanced from 37.5 hours in the week of July 1 to 39.2 in that of Aug. 1, as compared with 38,9 a year earlier; the latest average hourly rate was $\$ 1.073$, rather lower than the July 1 figure of $\$ 1.098$ cents, but higher than the mean of $\$ 0.957$ indicated at Aug. 1. 1946. The number of wage-earners reported in metallic ore mining was larger than at July 1, and there were also increases in their aggregate hours and wages; the average hours rose from 44.5 in the week of July 1, to 44.8 in that of Aug. 1, when the average earnings stood at \$1.009 per hour, as compared with \$1.01
at July 1。At Aug．I in 1946，the mean was 88,4 cents．Firms in the miscellaneous non－metallic mineral mining group showed an increase of one cent in the hourly average earnings of their hourly－rated wageoearners，bringing the rate to 78.3 cents．

There was a moderate advance in the number of wage－eamers reported in the local transportation group，In which the cowoperating firms belong largely in the street and electric reilway division：the average working time，however，declined by onesfifth of an hour，while the average hourly rate fell by nine otenths of a cent，to 83.6 cents at Aug． $1_{0}$ as compared with 71.5 cents at the same date in 1946．The building contractors furnishing statistics indicated the employment of 79,219 hourly－rated wage－aamers，a gain of 5,2 poc．over the number they had reported at July 1 ．The aggregate hours and weekly wages also showed considerable increases；the working time advanced from an average of 38.3 hours in the weok of July $l_{\text {，}}$ to 40.7 in that of Aug．1，when the average hourly rate stood at 90,9 cents，slightly above the rate of
 connection with the rate in building constructiong it will be recalled that the industry employs considerable numbers of unskillod and casual workers，as well as many skilled tradesmen at high rates of pay．In highway construction and maintenance work，the reported numbers of wage－earners showed an important increase，accompanied by longer working time and the payment of larger anounts in wages．The average hours indicated rose from 38.7 in the week of July 1 to 38.9 in that of Aug． 1 ，as compared with 38.5 hours 12 months previously．The average hourly rate in this industry at Aug． 1 was at 71.8 cents，as compared with the mean of 71 cents at July 1，and 65.8 cents at Aug。 1，1946。 Activity in hotels and restaurants seasonally advanced，there being increases in the reported numbers of hourly－rated wage－earners， in their aggregate hours and their weakly wages．The average hours rose from 43.1 in the week of July 1 ，to 43.6 in that of Aug． 1 ，but the average hourly rate fell from 52.3 cents a month earlier，to 51.6 cents in the week of Augo $l_{\text {，as compared with }}$ 14.4 cents at Augo 1，1946，and 41.1 cents at Augo 1，1945．In the laundry and dry－ cleaning division，there was a srall reduction in the number of hourly－rated wage－ arners reported by the co－operating firms；their average hours declined from 40.8 in the week of July $1_{0}$ to 40.4 in that of Aug． $1_{0}$ when the hourly rate was 55 cents， as compared with 54.7 in the week of July $l_{n} 1947$ ，and 48 cents in the week of Aug． 1, 1946。

## 3．Provincial Statistics for Leading Industries．

Provincial statistics of manchours and average hourly aarnings in manufacturing as a whole in the period since Augo $1_{n}$ 1945，are given in Table 4，while Table 5 contains date for the industries employing considerable numbers of hourly－rated wage－ earners in the various provinces．

The average hours worked in the factories furnishing statistics in Nova Scotia， New Brunswick，Manitoba，Alberta and British columbia were rather lower in the week ending Aug． 1 than in that of July $l_{p}$ while in Quebec，Ontario and Saskatchewan，there were small increases in the indicated working time．The greatest changes int he working time were the reductions of 1.2 hours reported in New Brunswick and Alberta， and the increase of 106 hours in Quebec．In comparison with the average hours reported for the week onding Aug． 1 ．1946，there were decreases in New Brunswick，Quebec， Ontario，Manitoba and British Columbia，with increases in Nova Scotia and Saskatchowan． These changes were sall．In Alberta，the average hours were the sane as those reported at the same dato a year ago．

In all provinces except quabso and Ahberta，tha gozeral average of hourly earnings reported at Aug． 1 was slightiy kigher than at Juiy 1；the declines sin the two provinces mentioned above，which amounted to one ififth of a cent in quebec，and to seven－tenths in Alberta，were due in the main to the changes in the distribution of the indicated wagemearners．Among the remaining provinces，the increases es

0.3 conts in New Brunswick, to 2,? cents in Saskatchowan and 2.4 cents in British Columbia. In comparison with the hourly rates indicated in manufacturing at Aug. 1 , 1946, there were considerable increases at the date under review in all provinces, the advances being as follows:- Nove Scotia, 13,2 p, $c_{0}$; New Brunswick, 14.5 p.cos Quebec, 13.7 p.c.: Ontario, 18.2 p.c.; Manitoba, 13.6 p.c.: Saskatchewan, 16.7 poce: Alberta, 9.7 pocu and British Columbia, 14.8 poco . While wage rates in recertmonths have adranoed considerably in most industries throughout the country, the general rise in manufacturing in the various provinces is materially affected by the industrial distributions therein.

The number of hourly-rated wagemearners in manufacturing (exclusive of central electric power stations) in the different provinces for whom statistics of man-hours and hourly earnings were available at the date under review, together with their average weokly carnings at July 1 and Aug. 1, 1947, and at Aug. 1 in 1946 and 1945, are shown below:-

| Provinces | Hourly-rated Wagem Earners Reported at August 1, 1547 | $\begin{aligned} & \frac{10}{\text { Aug. }} 1 \\ & 1947 \end{aligned}$ | $\text { Jul y } 1$ $1947$ | $\frac{\text { Wag } \mathrm{g}}{\substack{\text { Aug. } \\ 1946}}$ | $\frac{\operatorname{cug}_{1945} 1}{}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | no. | $\$$ | \$ | \$ | \$ |
| Nova Scotia | 19.991 | 33.97 | 34.08 | 28.82 | 31.98 |
| New Brunswick | 15,636 | 32.99 | 33.74 | 29.59 | 28.89 |
| Quebec | 255,320 | 32.35 | 31.26 | 29.10 | 29.52 |

4. Statistics for the Larger Cities.

Statistics of average hours worked and average hourly earnings in manufacturing as a whole in the larger cities in the last 24 months are given in Table 6, while Table 7 contains data for certain industries in these centres ab at July 1 and Aug。 1 , 1947, and Aug. 1. 1946.

As has previously been stated, the variations in the average rates in manufacturing as a whole in the cities, as in the provinces, are partly, or largely, due to the differences which are found in the industrial distributions of the wage-earners for whom statistics are available; the related sex distribution is another important factor contributing to the differences.

Partly as a result of the holiday factor, there were declines in the average hours worked by the hourly-rated wage-earners employed in the reporting manufacturing establishments in Toronto, Winnipeg and Vancouver at Aug. 1 as compared with the week of July l. In Kontreal and Hamilton, however, the working time was higher, on the average, the rise in the hours in the former city teing due, in the mains to the resumption of operations on a more normal scale than in the week of July 1 , in which had fallen the St. Jean Baptiste holiday, In Montreal, Toronto, Winnipeg and Vancouver, the average hours were lower than in the week of Aug. 1, 1946, but in Hamilton, the latest average, at 41.9 hours, was slightly higher than that of 41.8 hours indicated a year ago.

Changes in the industrial distributions of the workers reported in manufacturing in Montreal ond Winnipeg, and in the amount of overtime in cortain industries
therein, resultod in fractional declines in the general averages of hourly earnings reported in those cities at dug. 1 , as campared with the week of July 1 . In Toronto, Hamilton and Vancouver, however, the latest averages were rather higher than was the case a month earijer.

In the comparison with Aug. 1. 2946, there were general rises in the indicated average hourly earmings within the leading cities, the gains being as follows:-
 and Vancouver, $14.7 \mathrm{p} \cdot \mathrm{c}$ a $A s$ already stated, the rates of increase depend to a considerabie extent upon the industrial distribution of the wageaarners reported in the given oentres. The general increase in the year in manufacturing as a whole in Canads at Aug. 1 was 16.1 p.c.s the percentage advances in the various provinces are indicated is an earier paragraph.

The following table gives the average weekly earnings of the hourly-rated personnel reported by the co-operating manufacturers in certain leading centres at July 1 and Aug. 1. 1947, and Aug. 1. 1946.

Weekly Hages

| Aug. 1 <br> 1947 | July 1 <br> 1947 | Aug. 1 <br> 1946 |
| :---: | :---: | :---: |
| 8 | 8 | $\$$ |
| 31.85 | 31.35 | 29.40 |
| 33.81 | 34.07 | 29.22 |
| 36.49 | 35.69 | 30.01 |
| 32.67 | 33.54 | 29.54 |
| 36.88 | 36.58 | 33.32 |

The weekly earnings of the hourly-rated employees reported in manufacturing establishments in each of these above cities showed considerable increases at the date under review as compared with 12 months earlier. In the year, the advance in Montreal amounted to $8.3 \mathrm{p} . \mathrm{cos}_{0}$ in Toronto, to $15.7 \mathrm{p} . \mathrm{cos}_{\mathrm{g}}$ in in Hamilton, to $21.6 \mathrm{p} . \mathrm{c} .1$ in Winnipeg, to $10.6 \mathrm{p} . \mathrm{ce}_{\mathrm{g}}$, and in Vancouver, to $10.7 \mathrm{p} . \mathrm{c}$. The general rise in manufacturing throughout Canada in the 12 months amounted to 14.5 p.c. at Aug. 1 , bringing the general weekly average to $\$ 34.47$.
reble 3.- Averegt Bours and Averege Hourly and Meokly Barninga of Fige-Earnors for whom Deta are Avallable at lug. 1, 1947. With Comperative Figures for July 1, 1947 . and Aug. 1, 1946.
