## STATISTICS OF

AVERAGE HOURS WORKED

AND

## AVERAGE HOURLY EARNINGS

## AS REPORTED

## AT THE BEGINNING OF

SEPTEMBER, 1947

## BXPLANATION OF THE TERISS USED IN THIS RBPORT.

Wage-Earners.- Employers are asked to furnish monthly statistios In mann $^{\text {. }}$ hours on behalf of those wage-sarners for whom they keep a record of aggregate huurs worked, so that the data relate, in the main, to persons mployod at hourly rates. Information for salaried omployees is purposely excluded, while in many cases, statistios of man-hours are not available for cortain olasses of wagemearners, whose earnings, like those of most salaried employess, are not direotly dependent upon the number of hours worked; examples of wage-aprners frequently exoluded are route drivers. piece-workers in many but not all establishments, truck men, etc. In addition, some omployers do not keep a record of mandhours for any olasses of employees. Aocordingly, the number of workers for whom statistics are given in the present bulletin is smaller than the total number of employees, (salaried personnel and wage-oarners) for whom statistios of employment and payrolls are obtained in the monthly surveys on these subjoots; the results of these surveys are published in the monthly bulletins on omployment and payrolls, which also contain data relating to the sex distribution of the workers in recorded employment, an important factor contributing to differences shown in the average earnings in various industries.

The monthly statistics of average hours and avarage hourly earnings, like those of employmont and average weokly oarnings relato, in the main, to establishments usually omploying 15 persons and over, the smaller firms boing exoluded for reasons of economy in terms of cost and time. In the case of the mamufacturing industries. (largely represented in the material of the present bulletin), the statistics reiate to over $75 \mathrm{p} . \mathrm{c}$. of all salaried employees and wage-earners reported by the establishments co-operating in the monthly surveys of employment and payrolls; at the date of the last Deconnial Census, (June 1,1941 ), the manufacturers furnishing monthly data omployed approximatoly $93 \mathrm{p} . \mathrm{c}$. of all porsons onmeratod as at work in manufacturing.

In mining and oonstruction, data on hours and earnings are currently avallable for some 85 p .0 , and 83 p.co, of the total amployees reported to the monthly surveys of employment and payrolis in those industries, respectivelys at June $1,1941_{0}$ the co-oparating mine operators had employed over 96 poc. of all wage-earners at work as enumerated in the Consus, while the omployers in construction whose stetistice wore then recoived had reportod over 79 p.c. of the Census total of employees at work in that group. It should be noted that the comparisons with the census figures are complicated by differenoes in the olassifications used in compiling the two series, so that the percentages of coverage are only approximate.

Man-Hours. - The statistios of man-hours include overtime as well as the hours worked by part-time and casual workers. Hours oredited to persons absent on leave with pay in the recorded pay poriod are included in the statistics as though the hours for which peyment wes made had been worked.

Wages.- The wages reported represent gross earnings before deductions are made for taxes. unemployment insuranoe, eto $;$ they do not, however, include the value of board and lodging which in some cases is part of the remuneration of workers. Incentive and production bonuses and overtime payments are included, as are sums paid employees absent on leave with pay during the pay period for which statistics are given. The figures of average weokly wages result from the multiplication of the average hours worked during the period of observation, by the average hourly earnings reported in the same period.

Pay Poriods.- Statistio of man-hours and hourly mages reportod fos periods exceeding one week in duration are reduoed by the appropriate proportions to obtain for tabulation purposes the number of hours worked and the hourly earnings in one week in the indicated pay period; such information is then added to the data furnished by employers who pay on a woskly basis, so that, in all cases, the tabulated data represent the situation in one week in each month.

# DEPARTMANT OF TRADE AND COMMSRCE DOMINION BURZAU OF STATISTICS LMPLOYMENT AND PAYROLL STATISTICS BRANCH OTT AWA－CAIADA 

STATISTICS OF MAN HOUR AND BOURLY EARNANGS ABEPORED AT SEPT．1． 1947. WITH COMPARISONS AS AT AUG． $1.194 \%$ AND SEPT。 $1 \% 1946$.

## 1．Manufacturing．

According to information received by the Doninion Bureau of Statistics from 6.357 leading manufacturers，there was a slight increase at Sept。1 as compared with Aug． 1 in their number of hourly－rated wagemarners and in their aggregate hourly wages，but the hours worked showed a small decline．The reported hourly－rated staffs of these firms rose from 780,978 in the last roturn to $782_{8}, 464$ at the date under review，or by 0.2 pec．The aggregate hours worked in these plants were given as $33,131,520$ ，being less by 0.1 poco the total of $33,158,291$ recorded for the week of Augol．while their weekly wages advanced from $\$ 26,954,001$ at that date to $\$ 27.232,393$ in the week of Septo $1_{0}$ or by onie poco

The average hours worked in the establishments furnishing data declined from 42.5 in the weok of Aug。 $I_{0}$ to 42.3 in that of Septo $l_{8}$ as compared with 42.7 and 44.1 at Sept．$l_{0} 1946$ and 1945 ，respectively，The average hourly earmings in the period under review reached a new maxirnum，at 82.2 cents，as corapared with 81.3 cents at Aug． 1 and 70.6 cents at Sept．$I_{\text {，}}$ 1946；the mean at that date in 1945 was 69.2 cents． Increases in the wage rates in several industries was a factor contributing to the higher average generally indicated in manufacturing in the latest survey，but changes in the industrial distribution of the reported wagesarners and in their oarnings also tended to raise tho genaral avorags in manutacturing as a modo．

The wage－sarners for whom suabstics were arailable at septo 1 were paid an average of $\$ 34.7 \%$ ，as compared with $\$ 34.55$ in the week of Aug。1。 $\$ 30.15$ at Sept。1． 1946 and $\$ 30.52$ at Sept．1．1945．The increase in the average weokly wages of the hourly－rated wage－oarners employed by the co－operating manufacturers at Sept。1 anounted to 15.3 poc．as compared with a year oarliers and to 15.9 poco as compared with Sopt。 $I_{0} 1945$ 。

The statistics of average hours worked and average hourly earnings in manufacturing in the period for which data are available are sumarized in the table on the following pago．

Hours Worked．As already stated，the total of hours worked by persons paid by the hour in loading manufacturing establishments in the weok of Sept．$l_{0}$ at $33,131,520$ ，was less by 0.1 poco than the aggregate which they had reported for the week of Aug．1．There were small decreases on the whole in the working time reported in many categories of plants turning out durable and non－durable manufactured goods． The losses in lumber，paper products and clay，glass and stone works were most pronounced．On the other hand，higher aggregates of hours were reported in several industries，notably in pulp and paper，textile，beverage，tobacco，electrical apparatus and iron and steel faotoriss．In some bases the shanges were of a soasonal
nature, while in certain instances, the losses were probably due, in the main to holidays or absenteeism before the Labour Dey week-end.

TABLE 1- AVERAGE HOURS WORKRD AND AVERAGE HOURLY EARNINGS OF HOURLY-RATED WAGE-EARNERS IN MANUFACTURING AS A WHOLE AND IN THE MANUFACTURE OF DURABLE GOODS AND OF NON-IURABLA GOODS.

Factories producing durable manufactured goods reported a total of $16,596,455$ hours in the weok of Sept. If this was a frectional percentage decline fron the the aggregate of $16,602,691$ indicated for the week of Aug. 1. In the light manufactured goods division, the reported hours aggregated $16,535,065$; as compared with the total of $16,555,600$ hours worked by hourly-rated wage-earners in the same factories in the wosk of Aug. 1 , there was a reduction of 0,1 poc.

[^0]Tie hours reported as having been worked by the hourly-rated wage-earners in the week of Sept。l in the co-operating manufacturing establishments averaged 42.3, Nightly below the mean of 42.5 in the week of Aug. 1, 1947. The average was also lower than those of 42.7 hours and 44.1 hours in the week of Sept, 1 in 1946 and 1945, respectively. Hourly-rated employees reported in factories tuming out durable manufactured goods worked an average of 42.5 hours, as compared with 42.6 hours in the week of Allg. 1, 1947, 42.6 hours in the week of Sept. 1, 1946, and 44.2 hours in that of Sept. 1, 1945. In the light manufactured goods division, the reported hours gave an average of 42.2 , as compared with 42.3 at Aug。 1 . 1947. At Sept. 1 of last year and the year before, the averages were 42.7 and 44 hours, respectively.

Hourly-Barnings.- The weekly wages paid the hourly-rated wage-earners reported in manufacturing at the beginning of September were given as $\$ 27,232,393$, a sum which exceeded by one poce the disbursements of $\$ 26,954,001$ indicated by the same manufacturers in the week of Augol. In the durable manufactured goods division, the co-operating establishments paid a total of $\$ 144_{8} 725,133$ in weokly wages to their hourly-rated wage-earners; as compared with the sum of $\$ 14,566,385$ which they had disbursed in the week of Augo 1 , there was an advance of 1.1 p.o. Leading manufacturers in the non-durable goods division reported that they paid $\$ 12,507,260$ to their hourly-rated parsonnel. This sum was higher by one poce than their Aug. ] aggregate of $\$ 12,387,616$. As already stated, increased wage-rates in several incustries in the light and the hoavy manufacturing industries contributed to the higher weokly payments reported at the date under review, in spite of samall declines in the aggregate and average hours worked in these factories.

There was a further rise in the hourly average earnings reported in manufacturing as a whole at Sept. 1, when the mean was 82.2 cents, the highest figure in the record of 35 months. Previously, the maximum rate was that of 81.3 cents at Aug. 1s at Sept. 1 in 1946 and 1945, the hourly averages were 70.6 cents and 69.2 cents, respectively. In the last 12 months, the indicated average rate por hour has advanced by $16.4 \mathrm{p} . \mathrm{co}_{0}$. while the rise in the 24 months has amounted to $18.8 \mathrm{p} . \mathrm{ce}_{\mathrm{e}}$

In the heavy manufactured goods division, the coooperating firms reported an average of 88.7 cents for their wage-earners at the date under review, as compared with 87.7 cents at Aug. 1, 1947, and 76.5 cents at Sept, 1 in both 1946 and 1945. In the latter comparisons, the increases amounted to 15.9 poc , and $24.1 \mathrm{p} . \mathrm{co}$. respectively. In this category, slight advances were again reported in several branches of the lumber, clay, glass and stone, electrical apparatus, fron and steel and non-ferrous metal industries.

In the production of non-durable manufactured goods, the hourly earnings averaged 75.6 cents, exceeding by four-fifths of a cent the Aug: 1 mean, prevtorssly the maximum in the record of slightly less than three years; at Sept. in in 1915 and 1945, the averages were 65.1 cents and 60.9 cents, respectively. In the 12 months, the rise amounted to $16.1 \mathrm{p} . \mathrm{c}$, and in the 24 months, to $24.1 \mathrm{p} . \mathrm{c}$. In the comparison with the Aug. 1 figures, increases were shown in a considerable number of groups, notably in animal and vegetable food, rubber, textiles, tobacco, petroleum and other classes. As compared with Sept, 1 of last year, there were widespread advances.

Average Weekly Barnings.- As has been pointed out in preceding bulletins, statistics of man-hours and hourly earnings are not available for all classes of wagesarners, but only for those workers for whom employers keep accurate records of hours worked, such workers being mainly those who are paid by the hour; in general, this restriction results in the exclusion of salaried personnel. Among the classes of wage-earners for whom sat,isfactory records of hours worked are frequently not available are piece-workers in some but not all establishments, route-drivers, delivery men, etc. It may be noted that many firms state that the earnings of their wage-
earners paid at other than hourly cates exceed those of their hourly－rated personnel； this is particularly the case among piece－workers．In general，however，the wage－ earners for whom statistics are given in the present bulletin form importanty proportions of the total personnel of the oo－operating establishments．At uept． 1 ． the wage－earners for whom information on man－hours and hourly earnings were available made up 75.2 poo．of the total number of persons of all categories on the payrolls of the manufacturers furnishing monthly statistics of employment and payrolls at the same date；in the heavy manufactured goods division，the popaztioni was 1303 poco， and that in the light manufactured goods division，71．9 p．d．

1，That is of establishaents usually exploying 15 persons and over． See the monthly bullatins on Eaployment and Payroll．s．
2／Exclusive of eleotrio light und power．＊See footnote on page 2．
compared with the same periods in 1946 and 1945，in the weekly salaries－and－wages figures and the weakly wages in the reporting manufaoturing establishnents generally， and in cartain broad categories of manufacturing．

The movenents in the average earnings of salaried employeos and wage－earners in the veriod comencing at Nov， 1,1944 ，and those in the weokly earnings of hourlym rated wage－earmers are given in Table 2．The latter figures are obtained by multiplylng the average hourly earnings in the week of observation by the average hours worked in the same weok．There was a rise of 19 cents curer Aug．I in the weokly salariesmand－ wages figure in manufacturing as a whole at the first of September，as oompared with that of 22 cents in the weekly wages paid to the hourlymrated staff of the same firms． In the durable manufactured goods industries，the reported weekly salarieswandewages figure also advanced by 19 cents at Sept。 $l_{2}$ but the indicated weekly wages in that category were higher by 34 oents than at Aug：In the Iight manufactured goods division，the average woekly oarnings of the persons on salaries and wages were increased by 19 cents as compared with Aug．$l_{s}$ accompanied by a rise of 26 cents in the weekly arnings of the hourly－rated staffs of the cooperating establishments．

Following are the increases indicated at the date under review in comparison with the Sept，1， 1946 and 1945，in the weekly salaries－andowages figures and the weakly wages in the reporting manupacturing establishments generally，and in broad categories of manufacturing：－

In the comparison with Sept，l of last year，the latest figures of hourly wages in the all－manufactures group and in the production of heavy and of lightomenufactured goods show somewhat greater inareases than were indicated in the more general figures of salaries and wages in the same categories．The comparison with the data for Sept． 1,1945 ，shows in manufacturing as a whole the same poentage advance in the case of the salaries－and－wages figure as in the avarage weokly wage of the hourly－rated parsonnels although the rise in terms of money in the case of the salariaseandewagas figure was larger than that in the weekly wagese in the durable and the non－durable groups of manufactured goods，however，the percentage inoreases in the two years in the case of the weakly wages were rather higher than those indicated in the more general figures of salaries and wages．This situation is at variance wath that indicated in recent months，in which the advance in the saiarieseand－wages average in the 24 months＇comparison has exceeded that reported in the average weekly wages of wage－sarners paid by the houm

> 2. Non-Manufacturing Industries,

The proportions of wageearners in the non－manieacturing industries paid by the hour are smaller than in the case of the manufacturing industries．with the result that records of hours worked are frequently not available for such personse Thus the representation in the non－manufacturing industries in the monthiy statistios of man＝ hours and hourly earnings is less than in the manufaoturing division．

The number of hourly－rated wage－earners employed at Sept． 1 by the co－ operating coal operators showed a seasonal decline at Sept．$l_{0}$ whon their aggregate and
average hours were also lower. The average hourly earnings, however, were rather higher, standing at 110,8 cents, as compared with 107.4 cents at Aug. 1,95 cents at Sept. 1s 1946, and 94.1 cents at Sept. 1, 1945. The latest figure is the highest in the record of 35 months. In the extraction of metallic ores, the reported wadesarners were fewer in nurber than at Aug. $1_{5}$ when the aggregate hours had also exceeded the total indisated for the weok of Sept. 1. The average hours fell from 44.8 in the week of Aug, $I_{0}$ to 44.1 in that of Sept. $I_{0}$. The average hourly earnings at the latter date, however. were 102.3 cents, as compared with 101 oents at Aug. I. At Sept. 1 in 1946, the mern was 88.9 cents, and that in 1945.85 .4 cents. In the miscellanews nonwetallic mineral mining group, the comoperating operators reported little general change is the number of hourly-rated wage-earners, but the hours and the earnings were higher, in the aggregate and on the average. The latest hourly rate was 80.3 cents, the highest in the record. The Aug. 1 mean was 78.2 , while at Sept, 1 in 1946 and 1945, the figures were 69 cents and 65.7 cents, respectively.

The number of hourlywated wage-earners reported in the local transportation group (in which the co-operating firms belong largely ir. the street and slectric railmay division) was smaller at Sept. I than at Aug. 1; the average morking time showed Iittle change, but the average hourly rate stood at 84.8 cente, as compared with 83,8 cents at Aug. 1. 71.9 aents at Sept, 1, 1946, and 70.7 conts at the first of September in 1945. In the building constmation group, data were received from 1. 034 contraotors employing 83,595 hourly-rated wage-earners; as ompared with thode staffs at Aug. 1, there was an inorease of 3,7 p.c., acoompanied by that of 1.7 p.e. in their aggregate hours, and 3:4 p.c. in their weekly wages. The average hours, however, fell from 405 in the week of Aug: $l_{\text {a }}$ to 40.0 in that at Bept, $l_{\text {. The }}$ average hourly rate then stood at 92.9 cents, as compared with that of 91.4 cents at Aug. $I_{;}$the means at Sept. 1 in 1946 and 1945 , were 83.7 cents and 79.6 cents, respectively. In regard to the average earnings in the building industry, it will be racalled that large numbers of unsktiled and casual workers are amployed therein, as wellas many skilled tradesmen at. high rates of fay. In highray construction and maintenance work, the roportied number of wage-earner's showed a further inorease. The aggregate and average hours als advanoed, There was a rise in the aggregate weekly wages reported in this industry, but the average hourly rate declined slightly, from 71.7 in the weok of Aug: $I_{2}$ to $71_{.} 4$ in that of Sont. $I_{5}$ when the average was higher than that of 66.1 cents at Septe J. 1946, and 62.1 cents at Sept. 1, 1945. The com operating hotels and restaurants employed a rather larger number of hourlymated workerss but there was a deoline in the work' gg time whioh fell from 43.6 hours in the week of Aug $l_{2}$ to 43 k in that of Sept. $l_{8}$ The average hourly rate, on the other hand, advanced from 51.8 cents at the former date, to 5 ?. 2 cents at the latter, as compared with $44: 5$ cents at Sept. I。1946, and $41: 4$ cents at Sept. 1, 1945. A further reduction in employnen's was reported by laundries and dry-oleaning establishments; in which the average hours were slightly higher, at 40.6 in the week of Sept. I, as compared with 40,4 in that of Aug. 1. The hourly rate was then 55 cents, as compared with 56.2 cents in the week of Sept. J. 1947; at Sept. 1 in 1946 and 1945 , the averages were 48.9 cents and 47.4 oents, respectively.

## 3. Provincial Statistios for Loading Industrios.

Statistics of hours and average hourly earnings in manufacturing as a whole in the various provinces in the period since Juno 1. 1945, are presented in Table 4, while data for the industries in which considerable numbers of hourly-rated workers are reported in the various provinces are contained in Table 5.

In Nova Scotia, Ontario, Saskatchewan and British Columbia there were small doclines in the average hours worked in manufacturing as a whole in the week of Sept. 1 as compared with that of Augo 1. The roductions wers partly soasonal in charaoter. In New Brunswick, Queboc, Manitoba and Alberta, on the other hand, the hours worked were slightly higher, on the average. As compared with the averages indicated for the weok of Sept. 1. 1946, there were decreases in Quebec, Saskatcheman
and British Columbia; in Ontario, there was no general change in that oomparison, while the indicated working time was greater, on the average, in the period under review in Nova Scotia, Ner Brunswick, Manitoba and Alberta. In all provinces, the average hours reported in manufacturing establishments were lower in the weok of Sept. 1, 1947, than in the corresponding period in 1945.

There was no general increase from Aug. 1 in the average hourly earnings reported in manufacturing as a whole at Sopt. 1 , when the rates in all provinces were also higher thar at the same disto in either 1946 or 1945 . In the comparison with Aug. 1 , the gains ranged from 0.1 cants per hou in British Ccilumbia and 0.5 cents at Manitoca, to 1.6 cents in New Brunswick, 1.3 in Alberta, and 1.7 cents in Saskatchewan. The following shows the percentage increasesindicated at Sapt. 1. 1947, in manuracturing generally, as compared with last year and two years ago.

| Province | Sept. 1, 1946 | Sept. 1, 1945 |
| :---: | :---: | :---: |
|  | P.C。 | P.C. |
| va Sootia | 15.2 | 9.0 |
| W Brunswick | 17.5 | 22.4 |
| ebec | 12.7 | 17.2 |
| tario | 19.5 | 21.5 |
| nitoba | 13.5 | 18.5 |
| skatchewran | 17.6 | 25.1 |
| berta | 11.6 | 13.2 |
| itish Columbia | 14.7 | 19.3 |
| NADA | 16.4 | 18,8 |

While wage-rates in recent months have advanced considerably in most industries throughout the country, the general rise in manufacturing in the various provinces is materially affected by the incustrial distributions therein.

The number of hourly-rated wage-earners in manuraoturing (exclusive of central olactric power stations) in the different provinces for whom statistics of man-hours and hourly earnings were available at the date under review, together with their average veekly earnings at Aug. 1 and Sopt. 1,1947 , and Sopt, 1 in 1946 and 1845, are sinown balch:-

|  | Hourly-rated Wage- | Average Weakly Viages |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Frovinces | Larrers Reported at Sept. I. 1947 | $\begin{gathered} \text { Sept. } 1 \\ 1947 \\ \hline \end{gathered}$ | Aug. 1 <br> 1947 | $\begin{gathered} \text { Sept. } 1 \\ 1946 \end{gathered}$ | $\begin{gathered} \text { Sept. } 1 \\ 1945 \end{gathered}$ |
|  | No. | \$ | 1 | $\$$ | \$ |
| Nova Scotia | 19.816 | 33.86 | 33.88 | 28.26 | 31.56 |
| New Brunswick | 16,477 | 34.46 | 32.99 | 29.07 | 28.46 |
| quebeo | 257,178 | 33.03 | 32.35 | 29.63 | 29.15 |
| Ontario | 382,291 | 35.77 | 35,62 | 29.93 | 30.79 |
| Manitoba | 28,206 | 34.09 | 33.40 | 29.96 | 29.78 |
| Soskatchewan | 5,375 | 34.48 | 35.18 | 30.40 | 28.83 |
| Alberta | 14,578 | 32.91 | 33.69 | 29.89 | 30.76 |
| British Columbia | 58,161 | 37.59 | 38.34 | 34.49 | 34.40 |
| CATADA | 782.464 | 34.77 | 34.55 | 30.15 | 30.52 |

Table 6 gives statistics of average hours worked and average hourly earninge in manutioturing as a whole in the larger cities in the last 25 months, while Table 7
contains data for laading industries in these centres as at Aug。 1 and Sopt。 1 of the present year，and Sept．1．1946．

As has previously been pointed out，the disparities in the average rates in manufaoturing as a whole in these oities，as in the provinces，are partly，or largely， due to existing differences in the induetrial distributions of the wage－earrers for whom statistios are surailabies tha relatad sex ditstribution also constitutea ancther important factor

The hours worked in manufacturing as a whele at Sept。 1 were higher than at Aug． 1 in Montreal and Winnipeg；in Toronto and Hamilton，there were declines of one－tenth and two－firths of an hour，respectively，while no general change in the average was indioated in Vancouver in the month．In all five centres，the averenge hours worked were less than at Sept，？last year or in the week of Sept．1． $1845_{2}$

The average hourly rates in manufacturing as a whole at the date under reviow were higher than at Aug． 1 in each of the centres for which data are given in Table 6，The largest inorease was that of 1.8 cents in Hamiltone In all five oities， the averages also exoeoded those at，Sept， 1 in 1946．In this comparisoni，the rises were as follows：－Montreal． 11.1 poo．；Toronto， 18.5 p．0．：Haniltong 23.6 poco； Winnipeg， 12.9 pocoi and Vancouver： $12,6 \mathrm{p}, 0$ ．As already stated，the rates of increase depend to a considerable extent upn the industrial distribution of the reported wage－earners in the given centres．The genaral increase in the yoor in manufaoturing as a whole in Carada at Septe 1 was 16.4 poos；the percentage advances in the various provinoes are indicated in an earlier paragraphe

The following table gives the average weekly earnings of the nourly wated personnel reported by the co－operating manufacturers in oevtafn lading centres at Aug． 1 and Sept．1，1947，and Sept．1．1946．

| City | Hourlyarated Wage | Average Week 7 Wrares |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Barners Reportad at Sept．1． 1947 | Sept．l <br> $194 \%$ | $\begin{array}{r} \text { Augol } \\ 1947 \end{array}$ | $\begin{aligned} & \text { Sept } 2 \\ & 29.48 \end{aligned}$ |
|  | No． | \＄ | \＄ | \＄ |
| Montreal | 129．839 | 32.75 | 31.85 | 30.34 |
| Toronto | 110，353 | 34.49 | $5{ }^{2} .37$ | 29 css |
| Eamiltors | 40，362 | 36．88 | 36.49 | 22.98 |
| Winniper | 25，133 | 33.19 | 32.55 | 29．54 |
| Vanocreas | 25.5 55 | 38.74 | 86.60 | $33_{2} 24$ |

This tesle shows gseersi inaresines in tha average waskly gantugs of the hourlyarated employees reported by the co－operating manufaoturing establishments in each of these citios，as oompared with 12 and 24 months earlier．In the year，the advance in Kontreal amounted to eight $\mathrm{p}, 0,0$ in Toronto，to $16.7 \mathrm{p}, 0 . \mathrm{o}$ in Hamiltoris， to 23 poons in Winnipeg，to $12.4 \mathrm{p}, 0 \%$ and in Vancouver，to $11.1 \mathrm{p}, \mathrm{a}_{0}$ ．The gencrial rise in manufacturing throughout canada in the 12 months amounted to 15,3 p．c．a Sopt．1．1947，the general average then being \＄34．77．In comparison with Sept． 2 ． 1945，the inoreases in the arerage earnings of hourly－rated wage－earners reported in manufaoturing at the date under review were as fcllows：a Montreai， 6.3 p．0．

Table 3. - Average Hours and Average Hourly and wookly Burainge of 雨ge-Earners for Whom Data are Avalleble at Sept. 1, 1947, With Comparntive Mguree for lug. 1, 1947, and Bopt. 1, 1946.
