STATISTICS OF

## AVERAGE HOURS WORKED

## AND

AVERAGE HOURLY EARNINGS

## AS REPORTED

## AT THE BEGINNING OF

DECEMBER, 1948

## EXPLANATION OF TIIE TERMS USED IN THIS REPORT.

Wage-Earners.- Leading emplovers are asked to furnish monthly statistics on man-hours on behalf of those wage-earners for whom they keep a record of aggregate hours worked, so that the data relate, in the main, to persons employed at hourly rates. Information for salaried employees is purposely excluded, while in many cases, statistics of man-hours are not available for certain classes of wage-earners, whose earnings, like those of most salaried employees, are not directly dependent upon the number of hours worked; examples of wage-earners frequently excluded are route drivers, piece-workers in many but not all establishnents, truck men, etc. In addition, some emplovers do not keep a record of man-hours for any classes of employees. Accordinply, the number of workers for whom statistics are given in the present bulletin is smaller than the total number of employees, (salaried personnel and wage-eamers) for whom statistics of employment and payrolls are obtained in the monthly surveys on these subjects; the results of these surveys are published in the monthly bulletins on employment and payrolls, which also contain data relating to the sex distribution of the workers in recorded employment, an important factor contributing to differences shown in the average earnings in various industries.

The monthly statistics of average hours and average hourly earnings, like those of emplovment and average weekly earnings relate, in the main, to establishments usually employing 15 persons and over, the smaller firms being excluded for reasons of economy in terms of cost and time. In the case of the manufacturing industries, (largely represented in the material of the present bulletin), the statistics relate to over $75 \mathrm{p} . \mathrm{c}$. of all the monthly surveys of employment and payrolls. The factories furnishing monthly data on man-hours and hourly earnings in 1946 emplued over 81 p.c. of the total wage-earners reported by all manufacturing establishments in the same year, including wage-earners paid by the hour and those employed on other terms.

In mining and construction, data on hours and earnings are currently available for some $85 \mathrm{p} . \mathrm{c}$. and $83 \mathrm{p} . \mathrm{c}$., of the total employees roported to the monthly surveys of employment and payrolls in those industries, respectively; at June 1, 1941, the co-operating mine operators had employed over 96 p.c. of all wage-earners at work as enumerated in the Census, while the employers in construction whose statistics were then received had reported ovar 79 p.c. of the Census total of employees at work in that group. It should be noted that the comparisons with the Census figures are complicated by differences in the classifications used in compiling the two series, so that the percentages of coverage are only approximate.

Man-Hours.- The statistics of man-hours include overtime as well as the hours worked by part-time and casual workers. Hours credited to persons absent on leave with pay in the recorded pay period are included in the statistics as though the hours for which payment was made had been worked.

Wages.- The wages reported represent gross earnings before deductions are made for taxes, unemployment insurance, etc.; they do not, however, include the value of board and lodging which in some cases is part of the remuneration of workers. Incentive and production bonuses and overtime payments are included, as are sums paid employees absent on leave with pay during the pay period for which statistics are given. The figures of average weekly wages result from the multiplication of the avarage hours worked during the period of observation, by the average hourly earnings reported in the same period.

Pay Periods. - Statistics of man-hours and hourly wages reported for periods exceeding one week in duration are reduced by the appropriate proportions to obtain for tabulation purposes the number of hours worked and the hourly earnings in one week in the indicated pay period; such information is then added to the data furnished by employers who pay on a weekly basis, so that, in all cases, the tabulated data represent the situation in one week in each month.

## 1．MANUFACTURING．

In leading manufacturing establishments，the wage－earners for whom a record of man－hours is kept averaged 43．2 hours of work in the week of Dec．1．At Nov．1，the average had been 43.1 hours．The latest figure differed little from the averages indicated in the week of Dec． 1 in 1947 or 1946 ，but was considerably lower than the averages of 44.8 hours and 46.3 hours in the comparable period in 1945 and 1945. respectively．The aggregate hours worked by the hourly－rated wagemearners employed in the larger factories and their weekly wages increased by lol p．c．and 0.6 p．c．， respectively，in the week of Dec．l as compared with the week of Nov．1，although the number of wage earners declined by one poc．A new high was reached in the four－year record of hourly earnings at the date under review，when the general average in manufacturing stood at 95.9 cents，as compared with 95.5 cents at Nov。1。Revisions of wagerates in the electrical apparatus，automotive parts，sugar refining and other industries，together with the release of lower－paid casual labour in canning factories． contributed to this increase．At Dec． $1,1947,1946,1945$ and 1944，the hourly earnings were 85.6 cents， 74.5 cents， 67 cents and 70.5 cents，respectively．The average hourly earnings at the date under review showed an increase of 12 poc．as compared with a year earlier，of 28.7 p．c．in the 24 months＇comparison，of 43.1 poco over Dec．1，1945，and of 36 p．c．in the four year comparison．

The average weekly wages of the hourly rated personnel employed by leading manufacturers at Dec． 1 amounted to $\$ 41.43$ ．This was 27 cents above the Nov． 1 figure of $\$ 41016$ ，and was also the maximum in the record of 50 months．The general averages in manufacturing at Dec．I in earlier years were：1947，\＄37．24；1946，\＄32．18； 1945，$\$ 30.02$ ，and 1944，$\$ 32.64$ ．The latest figure showed an increase of 11.3 p．c．as compared with 12 months ago，of 28.7 p．c．in the two－vear comparison，of 38 poc．over the Dec．1，1945，average，and of 26.9 poco in the four year comparisono In all cases， the ilgures quoted represent gross earnings，before deductions for taxes，unemployment insurance contributions，etc．
I. BLES.

The statistics of average hours worked and average hourly earings in manum facturing as a whole as reported by leading establishments in the period for which data are available are given in Table 1 on page 2 ，while Table 2 on page 3 shows since Mov．1，1944，the figures of average weekly wages of wagewearners for whom the larger manufacturers keep a record of hours worked，together with statistics of average weekly salaries and wages in the same period．Table 3 toward the ond of the report gives the industrial distribution of the wagecearners for whom statistics are available at the date under review，giving their average hours of work，their average hourly earnings and their average weokly wages，with comparative averages as at Nov。1，1948，and Dec． 1 ，1947．Tables 4 to 8 provide monthly statistics for a period of some duration for certain industries and for the provinces and cities，while in Tables 9 and 10 are given industrial data on average hours and average hourly earnings in the provinces and in five of the leading industrial cities at Nov． 1 and Dec． 1,1948 ，and Dec． $1,1947$.
 in Wanufacturing as a Whole and in the Manufacture of Durable Goods and of Non-Durable Goods.

*The svarages at these dates ware affected by loss of working time ut the year-end holidays in the case of Jan. I, and by the Zaster holidays in the case of Apr. 1, 1948 and 7945 , and May 1, $1946^{\circ}$

There was little change in the average hours of work reported by the leading manufacturing establishments for their hourly－rated staff at Dec． 1 as compared with a month earlier．The general average increased by one－tenth of an hour，while the aggregate hours increased by 1.1 pic．Longer working hours were reported in leather products，vegetable products，printinfand publishing，tobacco，clay，glass and stone products，iron and steel，non－ferrous／p poducts and several other industries，while wage－earners in the animal food products，rubber，beverages and pulp and paper industries worked shorter hours on the average than in the week of Nov．1．In 1947． 1946， 1945 and 1944，the working week of Dec。1 in manufacturing generally had been 43.5 43.2 hours， 44.8 hours and 46.3 hours，respectively．The decline of 3.1 hours in hours， the average in the four－year period reflects a definite trend toward shorter standard hours，although a reduction in overtime work in many factories in the post－war period is also a contributing factor．

In factories manufacturing durable goods，the aggregate hours worked increased by 0.5 poc．at Dec． 1 as compared with Nov．1，while the number of wage－earners rose by 0.1 poc．There were small advances in the average hours worked in each of the industries included in this division，in which the hours reported at the date under review averaged 43.4 ，as compared with 43.2 in the same week a month earlier．A year ago，the working week had been 43.8 hours in length，while at the same date in 1946， 1945 and 1944，the averages had been 43.2 hours， 44.9 hours，and 46.9 hours， respectively．

The aggregate hours reported decreased by 0.2 poc。in the light manufactured goods division at Dec． 1 as compared with the week of Nov． 1 ，while the average working week was unchanged．The number of wage－eamers for whom man－hours were reported in the week of Dec． 1 was 0.3 p．c．less than that in the preceding month．During the week of Dec． 1 in 1947，1946， 1945 and 1944，the hours of work reported in the light manufactured goods industries throughout Canada averaged 43．2，43．2，44．5 and 45．5， respectively．

## HOURLY EARNINGS．

The hourly eamings reported by the larger manuracturing establishments at Dec．I reached a new maximum of 95.9 cents．In the week of Novo 1，wage－earners in the same plants had earned，on the average， 95.5 cents an hour．At Dec．1，1947， 1946， 1945 and 1944，the averages were 85.6 cents， 74.5 cents， 67 cents and 70.5 oents， respectively．The increase in the last twelve months amounts to $12 \mathrm{p}, \mathrm{co}$ ，that in the two years to 28.7 p．c．；in the 35 months＇comparison there was an advance of 43.1 p．c．in the latest figure，and in the four－year comparison，an increase of 36 p．c． In the heavy manufacturing goods industries，the earnings reported at Dec． 1 averaged 114.1 cents，exceeding the Nov．I figure by 0.7 cents．At Dec．1，1947，the average hourly earnings had been 92.8 cents，while at the same date in 1946， 1945 and 1944， the averages had been 81.8 cents， 74 cents and 77.9 cents，respectively。 An upward revision in the wage rates in the electrical apparatus and automobile parts industries was an important factor in the higher figure indicated in establishments producing durable goods．In comparison with the week of Dec．l a year earlier，the percentage increase was 12.2 poc．while the advances over Dec。1 in 1946， 1945 and 1944，amounted to 27.3 p．c．， 40.7 p．c．，and 33.6 p．co，respectively．

In factories producing light manufactured goods，there was an increase of one－ tenth of a cent in the hourly average in the week of Dec． 1 as compared with the previous maximum of 87.6 cents，reported at Nov．1，1948．Seasonal lay－offs of employees at relatively low rates of pay in fruit and vegetable canneries and revisions in wage rates in sugar refineries were largely responsible for an increase of half a cent in the edible plant products industry．The seasonally－increased employment of lower－paid help in the tobacco group，however，reduced the average hourly earnings in

$1 /$ Exclusive of electric light and power．Seo footnote on page 2.
that industry by 2.4 cents at the date under review．At Dec。1 in 1947，1946， 1945 and 1944 ，the hourly earnings in the non－durable classes taken as a whole averaged 78.3 cents， 67.6 cents， 60.6 cents，and 60.4 cents，respectively．The increase at the date under review as compared with a year earlier amounted to 12 poco，that in the two－years comparison was 29.7 p．c．；as compared with Dec． 1,1945 ，the rise was 44.7 p．c．，and that over Dec．1， 1944 ，stood at 45.2 p．c．

## AVERAGE TEEKLY WAGES．

The aggregate weokly wages paid to the hourlyคrated wage earners employed in the larger manufacturing establishments at Dec． 1 were 0.6 poc．higher than at Nov． 1 ． The average weekly wages of their hourlyrated wage－earners stood at $\$ 41.43$ at Dec． 1 ， as compared with $\$ 41.16$ at the beginning of November。 At Dec。1。1947，1946， 1945 und 1944 ，the weekly wapes were $\$ 37.24, \$ 32.18, \$ 30.02$ and $\$ 32.64$ ，respectively．The figure at the latest date was the maximum in the record of 50 months．In the heavy manufactured goods class，the weekly wages averaged $\$ 45.18$ ，exceeding by 51 cents the figure reported in the week of Nov，1，previously the maximum．In the non－durable foods division，the average weekly wapes rose only from $\$ 37.76$ to $\$ 37.80$ during the period between Nov． 1 and Dec． 1.

Table 2 gives a comparison of the average weekly salaries and wages reported monthly by leading manufacturers since 1944．with the average weekly wages paid the wage－earners for whom they keep record of hours worked．The former figures include wage－earners paid by the hour and those paid at other rates，（such as piece workers， etco），as well as workers paid by salary and commission．On the whols，however，the wage－earners for whom statistics are given in the present bulletin，as show in Table 3，form important proportions of the total personnel of the cowoperating establishments．At the beginning of December，such employees made up 76 poc．of the total number of persons of all categories on the payrolls of the manufacturers ${ }^{1 /}$ furnishing monthly statistics on employment and payrolls at the same date；in the heavy manufactured coods industries，the ratio was $78.8 \mathrm{p}, \mathrm{co}$ ，and that in the light manufactured goods division， 73.3 p．c．

The following table shows the percentage inoreases in the weokly salaries－and－ wages figure and in the wages of hourly－rated personnel at Dec。 $I_{8} 1948$ ，as compared with Deco 1 in 1947， 1946 and 1945．

| Industrial Division | Salaries and Wages | Weekly <br> Wages | Salaries and Wages | Weekly <br> Wages | Salaries and Fages | Weekly <br> Wages |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | poc． | poc． | p．c． | p．c． | poc． | p．c． |
| All Manufacturing | 11.3 | 11.3 | 26.5 | 28.7 | 34.8 | 38.0 |
| Durable Manufactured Goods | 11.4 | 11.1 | 26． 2 | 27.8 | 33.2 | 36.0 |
| Non－Durable Manufactured Good | ds 10.9 | 11.7 | 26.2 | 29.5 | 35.7 | 39.8 |

The high proportions which the hourly－rated wagemearners constitute of the total employees of the co－operating establishments lend interest to the data in Table 2．In the month，the combined salaries－and－wages figure increased by 29 cents， as compared with a gain of 27 cents in the weekly wages of the hourly－rated personnel． In the heavy manufactured goods industries，the reporting plants indicated an increase of 45 cents in the month in the salaries－and－wages figures，while a rise of 51 cents was indicated in the weekly earnings of hourly－rated wage－earners．In the non－durable manufactured goods industries，the average weekly earnings of the persons on salaries
1／That is，of establishments ordinarily emploving 15 persons and over．See the monthly bulletins on Employment and Fayrolls．It is estimated that the salaried personnel in manufacturing as a whole usually made up $16 \mathrm{p} \cdot \mathrm{c}$ ．to $17 \mathrm{p} \cdot \mathrm{c}$ ．of the total number of employees．
and wages at Dec．I incremeed by 12 cents，while those of the hourly－rated personnel rose by four cents from Nov． 1.

## 2．Non－lianufacturing Industries．

In many of the non－manufacturing industries，few if any of the wage－earners are paid by the hour，with the result that a precise record of the hours worked is not kept．The representation of the non－manufacturing industries in this bulletin is therefore less than that in the manufacturing classes．

The following table gives a comparison of the percentase increascs in the avarage hourly and weekly earnings of wage－earners reported in manufacturing and in certain non－manufacturing industries in Canada at Dec．1，1948，as compared with the same date in earlier years：－

| 9.2 | 26.9 | 28.7 | 29.0 |
| 9.9 | 19.2 | 35.4 | 40.5 |

The following notes deal briefly with the statistics for several of the non－ manufacturing classes．

In the week of Dec．1，the averages of hours worked and weekly wages reported in the coal mining industry were higher than in the week of Nov．1，but the hourly earnings declined by thres otenths of a cent，from the maximum figure of 127.7 cents at Nov．1．At Dec。1 in 1947，1946， 1945 and 1944，the average hourly earnings were 111.9 cents， 100.9 cents， 93.7 cents and 93.2 cents，respectively．Wage－earners engaged in the extraction of matallic ores worked，on the average， 46 hours in the weok of Dec．l，seven－tenths of an hour longer than in the week of Nov．l．The hourly earnings showed little change，increasing by one－tenth of a cent in the montho At the beginning of December in 1947，1946， 1945 and 1944，the hourly averages had been 104 cents， 90.7 cents， 85.2 cents and 85.2 cents，respectively．In the four years，the weekly wages rose from $\$ 39.87$ at Dec． 1,1944 ，to $\$ 52.53$ at the date under review．In the non－metallic mining group，the average hours of work decreased from 45.3 hours in the week of Nov．1，to 44.4 hours in that of Dec。1，largely because of seasonal inactivity in the quarries of Ontario．There was also a decline in the hours reported in the gas wells of Alberta．In the montr，the hourly eamings dropped by one－tenth of a cent from the previous maximum of 99.4 cents indicated at Nov．1．The hourly earnings at Dec．1，1947，1946， 1945 and 1944，had been 84.6 cents， 72.3 cents， 64.8 and 66.6 cents，respectively．In mining as a whole，the hourly earnings at Dec．I were 115.3 cents，as compared with 115.1 cents a，month earlier，and 103 cents， 91.3 cents， 85.3 cents and 85.4 cents in 1947，1946， 1945 and 1944，respectively．

In the local transportation group，the situation changed only slightly during the period under review．The average hours rose by three－tenths of an hour，while the average hourly earnings remained constant，at 97.6 cents．At Dec．1，1947，1946， 1945 and 1944，the averages were 88.4 cents， 77.4 cents， 70.3 cents and 69.6 cents， respectively。

In building construction，the acgregate hours worked，the number of wage－earners reported and the aggregate wages paid by the reporting firms decreased in the week of Dec．1，as weather conditions restricted exterior work in many localities．The wage－ earners remaining on the payroll worked，on the average，three－fifths of an hour less than during the same week a month earlier．The hourly earnings increased slightly， from 104． 7 cents to 104.9 cents during the morth．At the samo date in 1947，1946， 1945 and 1944，the hourly averages were 96.5 cents， 86 cents， 81.7 cents and 80.5 cents， respectively，There was a seasonal decline in the number of wage－earners for whom man－hours were reported in the highway construction industry at Dec． 1 as compared w．th Nov．1．The averafo hours worked declined from 39.1 in the preceding report， to 37.4 during the pay period under review，but the hourly earnings increased by one－half a cent，to a new maximum of 81.6 cents．At the same date in 1947，1946， 1945 and 1944，the hourly figures were 74.7 cents， 67 cents， 62.7 cents and 63 cents， respectively．

Ware－earnors in hotels and restaurants for whom man－hours are reported worked， on the average，four－fifths of an hour longer in the pay period under review，than in the week of Nov．1．The hourly earnings advrinced fractionally，to 60．9 cents．A year ago，the average hourly earnings were 54.7 cents，while at Dec． $1,1946,1945$ and 1944 the average had been 50.8 cents． 42.2 cents and 40.7 cents，respectively。 The average hours worked by wage eearners in laundrios and dry－cleaning establishments increased from 41.2 hours at Nov． 1 to 41.4 hours during the period under review， while the average hourly earnings rose during the same period to 62.7 cents．At the same date in 1947，1946， 1945 and 1944，the hourly earnings had averaged 58.6 cente， 51 cents， 47.5 cents and 46.2 cents，respectively．

## 3．Provincial Statistics for Loading Industries

Monthly statistics of man－hours and average hourly oarnings in manufacturing as a whole in the various provinces in the last 25 months are given in Table 5 ． Table 6 contains provincial figures of average weekly wages of wage－earners for whom data are available since Nov．1，1944．In Table 9 are shown provincial statistics of average hours and average hourly earmings at Nov， 1 and Dec。1，1948，and Dac。1， 1947，for the manufacturing industries emploving representative numbers of hourly－ rated workers in the varlous provinces．

In many cases，the provincial avarages of hours worked by wage－earners in the factories furnishing data showed only slight changes in the week of Dec．I in comparison with those reported in the week of Nov．I．In Nova Scotia and Quebec， the average working hours wers unchanged at 44.7 hours and 45.1 hours，respectivelyo In New Brunswick，Manitoba，Saskatchewan and Alberta，there were slight deoreases， the most important being that of two－fifths of an hour in Alberta．In Ontario and British Colurabia，there were increases in the indicated working week amounting to one－fifth of an hour and one half an hour，respectively．Heightenod activity in the lumber，iron and steel and other industries was responsible for the longer working zours in British Columbia in the week of DeC。1．

The upward trend in average hourly exinings continued in all provinces except hiova Scotia and Saskatchewan．In Nova Scotia，there was a decline of half a cent in the average rate，due in part to shorter working hours in the iron and steel industry． The average hourly earnings in Saskatchewan declined by three－tenths of a cent during the month．In the other provinces，there were small increuses，varying from one－fifth of a cent in Quebec and Manitoba，to four－fifths of a cent in New Brunswick，half a cent in Ontario，seven－tenths in British Colunbia and one cent in Alberta．In Ontario increased wage rates in the electrical apparatus and automotive parts industries and heightened activity in establishments tuming out iron and steel products contributed to the rise in average hourly earnings in the general figure in manufacturing．In British Columbia，higher wages were reported by shipbuilding firms and sugar
reineries, while seasonal layooff of low paid casual help in fruit, vegatable and fish canneries was also a factor. In Alberta, seasonal slackening in sugar refineries, together with longer working hours in railway car shops, brought about a slight increase in manufacturing as a whole。

As compared with Dec. l, 1947, the increases in hourly earnings in manufacturing as a whole were as follows: Nove Scotia, 7.2 cents; New Brunswick, 10.3 cents; Quebec, 9.5 cents; Ontario, 10.5 cents; Manitoba, 10.7 cents; Saskatchewan, ll.l cents; Alberta, 12.8 cents and British Columbia, l2.l cents. While the upvard movement in average hourly earnings in leading manufacturing establishments evident since the cessation of hostilities continues, the rates of increase at the date under review were less than those reported in immediately preceding months.

The following table gives the percentage increases in the average hourly earnings and the average weekly wages of wage-earners in manufacturing for whom statistics are available in the various provinces at Dec. l, 1948, as compared with the same date one, two and three years earlier, together with the number of wageearners reported by leading manufacturers at the latest date:-

| Provinces | Hourly-Rated <br> Wage Earners <br> Reported at <br> Dec. 1, 1948 |  | ase in Earn <br> 1, 1948 <br> Dec. <br> 1946 | rage <br> at <br> ver <br> Dec. 1 , 1945 | $\begin{gathered} \text { Inc } \\ \text { We } \\ \text { De } \\ \text { Dec. } \\ 1947 \end{gathered}$ | e in <br> y Vilag <br> , 194 <br> Dec. <br> 1946 | ```rage at over Dec. 1, 1945``` |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | No. | poc. | $\mathrm{p} \cdot \mathrm{c}$ 。 | poc. | poc. | p.c. | poc. |
| Nova Scotia | 20,171 | 9.3 | 21.1 | 22.0 | 9.1 | 20.3 | 17.0 |
| New Brunswick | 15,023 | 13.3 | 29.4 | 41.5 | 15.6 | 28.8 | 39.9 |
| Quebec | 259,426 | 12.3 | 27.9 | 40.5 | 11.1 | 27.5 | 34.5 |
| Ontario | 396,190 | 11.8 | 29.6 | 47.2 | 11.0 | 30.5 | 43.8 |
| Manitoba | 29,351 | 12.9 | 23.9 | 36.8 | 12.6 | 23.7 | 32.5 |
| Saskatchewan | 5,339 | 12.7 | 29.3 | 43.0 | 13.2 | 28.7 | 37.8 |
| Alberta | 15,231 | 15.1 | 29.4 | 39.0 | 15.6 | 29.7 | 36.8 |
| British Colunbia | 56,834 | 11.7 | 28.1 | 42,8 | 13.5 | 26.8 | 33.3 |
| Cavada | 798,084 | 12.0 | 28.7 | 43.1 | 11.3 | 28.7 | 28.7 |

The industrial and the related sex distribution of the wage-earners reported by leading firms in the various provinces have an important influence on the differences in the amounts by which the hourly earnings in manufacturing as a whole have risen in the year. The above table shows that all provinces have shared in the general trend towards higher wage rates since the cessation of hostilities. The particularly marked percentage increases over Dec. 1, 1945, are due in part to the fact that industry was then seriously affected by curtailment of operations in establishments which had produced military supplies during the war, while the dispute in the automotive industry ise the Chnal senchs of 2945 was 3 ?so a factor of importance in the situation.

> 4. Statistics for the Larger Cities.

Table 6 contains monthly statistics of average hours oi work and average hourly earnings in leading manufacturing establishments generally in the larger cities in the last 25 months; in Table 8 are given the figures of average weokly wages reported since Nov. 1, 1944, while Table 10 gives statistics of average hours of work and average hourly earnings in certain industries in these centres as at Nov. 1 and Dec. 1, 1948, and Dec. 1, 1947.

As has previously been stated, the variations in the average hourly earnings in manufacturing as a whole in the cities are due, in part, to differences in the industrial distributions of the wagemearners for whom statistics are available; the
related sex distribution of the labour force is another important factor contributing to these disparities.

In Montreal, Toronto and Winnipeg, the average hours worked by wagemearners for whom man-hours are reported by leading manufacturers showed little if any change during the week of Dec. 1 as compared with the week of Nov. 1. In Hamilton, there was an increase of seven-tenths of an hour, due mainly to a longer working week in the iron and steel industry. The wage-earners reported in Vancouver averaged twofifths of an hour longer in the week of Dec. 1 than in that of Nov. 1.

All five centres reported higher average hourly earnings than at the same date a month earlier. In Hamilton, the advance amounted to 2.2 cents, largely accounted for by higher wage rates in the electrical apparatus industry. In Vancouver, the general average of hourly earnings in manufacturing as a whole rose by one cent as compared with the week of Nov. 1. Increases in the rates of wages paid in certain branches of the vegetable foods industry, and seasonal slackening in employment in canning factories, contributed to the gain. The advances in Montreal, Toronto and Winnipeg were minor.

In comparison with a year aro, the average hourly earnings in manufacturing have risen by 10.1 cents, 9.9 cents, 13.8 cents, 10.7 cents and 12.1 cents in Montreal, Toronto, Hamilton, Winnipeg and Vancouver, respectively. It may be noted that, on the whole, the increases between Nov, 1 and Dec. 1 were less marked than those shown in recently preceding months. In all five centres the indicated weekly wages advanced from Nov. 1 to Dec. 1. The percentage increases in the average hourly and weokly earnings reported in manufacturing as a whole in the leading industrial cities at Dec. 1, 1948, as compared with the same date in immediately proceding years, are given in the following table:-

| City | Hourly-Rated <br> Wage-Earners <br> Reported at <br> Dec. 1, 1948 | Increase in Average Hourly Earnings at Dec. 1, 1948, over |  |  |  | ase in kly Wa 1, 19 Dec. 1946 | rage at over Dec. 1. 1945 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | No. | poc. | p.c. | p.c. | p.c. | poc. | p.c. |
| Montreal | 136,157 | 12.4 | 26.0 | 36.2 | 12.7 | 26.6 | 29.1 |
| Toronto | 117,512 | 11.0 | 29.1 | 41.1 | 11.0 | 29.7 | 38.7 |
| Hanilton | 42,968 | 14.7 | 32.6 | 50.0 | 13.1 | 31.0 | 44.2 |
| Winnipeg | 26,134 | 13.0 | 23.2 | 35.6 | 12.7 | 23.5 | 28.9 |
| Vancouver | 24,297 | 11.9 | 25.4 | 38.3 | 12.2 | 24.1 | 29.0 |

In Canada as a whole, the general advance in manufacturing as compared with a year earlier was 12 p.c. in the case of the average hourly rate, and 11.3 p.c. in the case of the average weekly wages, while in the 24 months' comparison, the Dominion average of hourly earnings rose by 28.7 p.c. and that of weekly wages by 23.7 p.c. The percentages of increase in the various provinces are given in a preceding paragraph.
 With Comparitive Figures for Wov, 1, 1948 and Dea, 1, 1947.
(The latest rigures ere subjoot to revision).
