AVERAGE HOURS WORKED

AND<br>\section*{AVERAGE HOURLY EARNINGS}

## AS REPORTED

## AT THE BEGINNING OF

FEBRUARY, 1948

## EXPLANATION OF THE TERMS USED IN THIS RBPORT.

Wageorarnars.- Employers are asked to furnish monthly statistias on manhours on behall of those wagemarners for whom they keep a record of aggregate hours worked, so that the data relate, in the main, to persons employod at hourly rates. Information for salaried omployees is purposely excluded, while in many cases, statistics of manehours are not available for cortain olassos of wage-oarners, whose earnings, like those of most salaried employees, are not directly dependent upon the number of hours worked; examples of wageaprners frequently excluded are route drivers. pieceworkers in many but not all establishments, truck men, eto. In addition, some employers do not keop a record of manohours for any classes of employoes. Accordingly. the number of workers for whon statistics are given in the present bulletin is smaller than the total number of employees, (salaried personnel and wage-oarners) for whom statistics of employment and payrolls are obtained in the monthly aurveys on these subjects; the results of these surveys are published in the monthly bulletins on employment and payrolls, which also contain data relating to the sex distribution of the workers in reoorded employment, an important factor contributing to differences shown in the average earnings in various industries.

The monthly statistics of average hours and average hourly earnings, like those of employment and average weekly earnings relate, in the main, to establishmente usually employing 15 persons and over, the smaller firms being excluded for reasons of economy in terms of cost and time. In the case of the manufacturing industries, (largely represented in the material of the present bulletin), the statistics relats to over 75 p .0 . of all aslapled employees and wagemearners reported by the establish monts coooperating in the monthly surveys of employment and payrolls; at the date of the last Decennial Census, (June 1, 1941), the manufaoturers furnishing monthly date employed approximatoly 93 p.c. of all porsons enumerated as at work in manufacturing.

In mining and construction, data on hours and earnings are currently avallable for some $85 \mathrm{p} . \mathrm{c}_{\mathrm{e}}$, and 83 p .00 of the total employees reported to the munthy surveys of employment and payrolls in those industries, respectively: at June 1. 1941, the co-operating mine operators had employed over 96 p.o. of all wagewearners at work: as enverated in the Census, while the employers in construction whose statistios wsto thon received had reported over 79 p .0 , of the Census total of employees at work 1 : that group. It should be noted that the cqmper isons with the Census figures are complicated by differenoes in the classifications ussa in coaptilag the the whiles so that the percentages of coverage are only approximats.

Man-Hours. - The statistics of man-hours hishade warthis as wall as the hours worked by part-time and casual workers. Hours credited to persons absent on leave with pay in the recorded pay period are incluad in the statistios as though the hours for which payment was made had been workel.

Wages.- The wages reported represent gross earninge before deduotions are made for taxes, umemployment insurance, etc.; they do not, however, include the value of board and lodging which in some cases is part of the remuneration of workers. Incentive and produotion bonuses and overtime payments are included, as are sums pald employees absent on leave with pay during the pay period for which statistios are givem. The figures of average weekly wages result from the multipiioation of the average hours worked duriag the period of observebton, by the avarage hourly sarnings reportse in the same period.
 periods exce日ding one week in duration are reduced by the appropriate proportiona so obtain for tabulation purposes the number of hours worked and the hourly earnings in one weok in the indioated pay poriod; such information is then added to the data furnishod by employers who pay on a weokly basis, so that, fais al2 casss, the tabulatad data represent the sttuation in ono week in each month.

1. Manufacturing.

The number of hourly-reted wage-enmers employed in manufacturing at the beginning of February showed a very slight increase as compared with Jan. 1, accompanied by a consicerable rise in the hours worked, and in the aggregate weekly wages. The gains in the hours and the earnings were largely due to a return to more normal working conditions following the usual holiday losses reflected in the statistics for the week of Jan. 1. The 6,370 establishments furnishing iata to the Dominion Bureau of Statistios indicated 770,537 hourly-rated employees at the date under review, when their hours were giveri as $32,967,952$. The sums paid to these workers at Feb. 1 amounted to $\$ 28,528,845$. at jan. 1, the reported wage-earners of the same firms numbered 770,306 , the hours $29,499,692$, and the weekly wages, $\$ 25,503,701$. The gain in the hours amounted to $11.8 \mathrm{p} \cdot \mathrm{cm}$, and that in the wages, to $11.7 \mathrm{p} . \mathrm{c}$. These percenteges were smaller than those nated in a similar comparison a yenr earlier. Thet this wes so, resulted in large messure from the shortages of as and power due to unusually severe weather which soriously affected certain areas and induitries in the latter week of inuary and the carly part of February.

The hours worked, on the averege, rose from 38.3 in the week of Jan. 1, to 42.8 in that of Feb. 1, 1948, when the average was rather lower than that of 43.5 at Dec. 1, 1947. The means at Feb. 1 in 1947, 1946 and 1945 were $43.2,44.1$ and 45.4 hours, respectively.

The average hourly earnings in manufacturing at the date under review stood at 86.5 cents, showing a slight decline from the figure of 86.6 cents at Jan. 1 , but exceeding the Dec. I average of 85.6 cents, and those of 76.4 cents, 68.1 cents and 70.1 cents in the week of Feb. I in 1947, 1946 and 1945, rospectively. ine hourly ratos incicated in the two most recent surveys are the hiphest recorded in the comperatively brief pericd during which monthly statistics of man-hours and hourly earnings have been collected. In the last year, the increase amounted to 13.2 p.c., while as compared with Feb. 1 in 1946 , the Feb. 1, 1948, average showed an advonce of 37 p.e.

The reported weekly wages in manufacturing as a whole averafed 337.02 at the sate under review, as compared with $\$ 33.17$ in the holinay week ending Jan. 1,1948 , and $\$ 37.24$ in the week of Dec. l; at Feb . I in 1947 , 1946 and 1945 , the weokly figures had been $\$ 33.00, \$ 30.03$ and $\$ 31.83$, respectively. "ith the exception of the average at Lec. l, 1847, the latest weokly figure was the highest in the record; the reduction from the December average wes largely due to changes in the distribution of wage-earners and in the hours worked, on the everage, resulting from the temporary shortages of fuel. In spite of this fector, the increase in wages in the last 12 months has amounted to 12.2 p.c., while the rise in the 24 months was 23.3 p.c. Since Feb. 1, 1945, there has been an advance of 16.3 p.c. in the weekly wages reparted for the hourly-rated personnel of leading manufacturers. The averages represent gross earnings, before deductions are made for income tax, unemployment insurance contributions, etc.

| Feb. 1 | 42.8 | 42.7 | 42.9 | 86.5 | 93.2 | 80.0 |

* The averages at these dates were affected by loss of working time at the year-end holidays in the case of Jan. 1, and by the Easter holidays in the case of Apr. 1, 1945, and May 1, 1946.

The statistics of average hours worked and average hourly earnings in manufacturing as a whole as reported by leading establishments in the period for which data are available, are given in the table on page 2, while Table 2 on page 4 summarizes the figures of average weekly wages of wage-earners for whom the co-operating manufacturers keep record of hours worked. Tables 3 to 10 at the end of this report give more detailed statistics, industrially, for Canada as a whole, together with provincial and city data on hours of work and hourly and weekly aarnings.

Hours Morked.- As already stated, the hours worked by hourly-rated wage-earners employed in leading manufacturing establishments in the week of Feb. 1 totalled $32,967,852$, being greater by 11.8 p.co than their aggregate of $29,499,692$ hours in the week of Jan. 1. Increased working time was reported in all industrial groups, in reaction from the widely-distributed losses which had taken place during the holiday week. The hours reported in the durable manufactured goods division amounted to $16,304,295$ in the period under review; as compared with $14,916,423$ in the week of Jon. 1, there was a rise of 9.3 p.c. In the light manufactured poods industries, the hours were given as $16,663,557$, exceeding by 14.3 p.c. the total of $14,583,269$ indicated in the preceding survey.

In manufacturing as a whole, the hours worked, on the arerage, in the rreek of Fob. 1, 1948, were longer by 4.5 than in that of Jan. 1, but there was a decline of two-fifths of an hour as compared with the week of Feb. 1, 1947, of 1.3 hours as compared with Feb. 1, 1946, and of 2.6 hours as compared with Feb. 1, 1945. In the heavy manufactured goods industries, (which were particularly affected in certain branches by the gas and power shortages), the average hours worked rose from 38.5 in the holiday week of Jan. 1, 1948, to 42.7 in that of Feb. 1, 1948, when the average was 1.1 hours lower than at Liec. 1, 1947, although it was only half an hour less than at Feb. 1, 1947. As compared with Feb. 1, 1946, establishments in this category showed a falling-off of 1.7 hours at the date under review, when the working time was lower by 3.3 hours than at $F e b, 1,1945$. In the non-durable manufactured goods division, the indicated hours averaged 42.5 , as compared with the merns of 38.1 at Jan. 1, 1948, 43.1 at Feb. 1, 1947, and 43.8 at Feb. 1, 1946, and 44.7 at Feb. 1, 1945.

Hourly Eamings. - The wages paid to the 770,537 hourly-rated employecs of the co-operating manufacturers were stated as $\$ 28,528,845$ in the woek of Feb. 1, 1948, as compared with $\$ 25,533,701$ at Jan. 1. The increase of 11.7 poc. resulted from the resumption of work on a more usual scale following the year-end holidays. In the durable manufactured goods industries, the indicated earnings argregnted $\$ 15,198,047$ in the week of Feb. 1; as compared with $\$ 13,863,970$ in the preceding retiam, there was a rise of 9.6 p.c. The 388,873 hourly-rated wage-earners reported in the noncurable manufactured croods wore peid the sum of $13,329,898$ in weekly wages at Feb. 1. This total was higher by 14.2 D.c. than that of $11,669,731$ reported a month earlier sow the helinay wrek.

The ayerage houriy asmings in manuiacturing as a mele at Fob. 1 , at 86.5 cents, showed little change from the Jan. 1 mean of 86.6 certs. These two ficures are the hichest in the comparatively brief record of 40 months. The averages at Feb. 1, 1947, 1946 and 1945 were 76.4 cents, 68.1 cents and 70.1 cents, respectively.

The hourly eqmings in the hervy manufactured goods industries averaged 93.2 cents at Feb. 1, 1948, as compared with 92.5 cents at Jan. $1,1948.83 .5$ cents at Feb. 1, 1947, 75.2 cents at Fob. 1, 1946, and 77.8 cents at Feb. 1, 1945. Within this category, the earnings averaged a little higher than at jan. I in the electrical apparatus, iron and steel and clay, glass and stone industries; the changes were slight.

In the non-durable manufactured goods industries, the average hourly eamings

* See fontnote on page 2.
were 80 cents at Feb. 1, as at Jan. 1, 1943. At the beginning of February in earlier years of the brief record, the rates were as follows:- 1947, 69.4 cents; 1946, 61.3 cents, and $1945,60.3$ cents. The averaçe hourly earnings at Jan. 1 and Feb .1 were the maximum figures in the period for which data are available. The hourly eamings in many branches of the light manufactured goods industries showed increases at the date under review as compared with Jan. 1, also exceeding the means reparted at Feb. 1, 1947. Among these advances may be mentioned those in the leather, mrinting and publishing, paper procuct, rubber, textile, chemical, beverage and petroleum divisions. In some cases, the increases as compared with a month earlier were partly seasonal in character, while the payment of higher wage-rates was also an important factor.

Average Weekly Wages.- As has been mentioned in previous bulletins, data on man-hours and hcurly earnings are not available for all classes of wage-earners, but only for those workers for whom employers keep accurate records of hours worked, being mainly those who are paid by the hour; in generel, this restriction also results in the exclusion of salaried parsonnel. Among the categories of wage-earners for whom satisfactory records of hours worked are frcuently not available are piece-workers in some but not all establishments, route-drivers, lelivery men, etc. It may be noted that many firms state that the earnings of their wage-earners paid at other than hourly rates exceed those of their hourly-rated personnel. this is particularly the case among piece-workers. In general, however, the wage-earners for whom statistics are given in the present bulletin form important proportions of the tatal personnel of the co-operating establishments. Thus, at the beginning of February, the wage-aamers for whom data on man-hours and hourly earnings are atailable constituted 75.3 p.c. of the total number of persons of all classes on the payrolls of the manufacturersl/furnishing monthly statistics on employment and payrolls at the same date; in the heavy manufactured goods industries, the ratio was 78.4 p.c., and that in the light manufactured goods division, 72.4 p.c.
ini Fiem of the large proportions which the hourly-rated waee-eamers constitute of the total emplovees of the coooperating establishments, the comparisons in Table 2 are interesting, showing the fluctuations in the averge earnings of salaried employees and were-earners in the last 40 months, and those in the weekly earnings of hourly-ratgr staff: the latter figures are obtained by multiplying the average hourly earnings in the week of observation by the average hours worked in the same week. There was an increase of $\$ 3.09$ in the weekly salaries-and-wages firgure at Feb. 1 as compared with Jan. 1, whilo the weekly earnings of hourly-rated personnel rose in the same comparison by $\$ 3.85$. Largely as a result of the gas and power situation, the latter increase was slightly less than that of $\$ 3.93$ indicated in the same comparison a year earlier.

In the heavy manufactured goods indistries, the reporting establishments showed a gain of $\$ 3.31$ in the salaries-and-wages figure, and of $\$ 4.03$ in the weekly earnings of the hourly-rated employees. In the light manufactured goods industries, the average weekly earnings of salaried employees and wage-earners at Feb. l increased by $\$ 2.95$ as compared with Jon. 1, and those of the hourly-rated personnel, by ${ }^{9} 3.84$.

As compared with Feb. 1, 1947, the levels indicated in the most recent survey were decidedly higher in the case of the combined salarios-and-wages figure and in the wages of the hcurly-rated staff, there being considerable similarity in the rates of gain in the two classes. In the last 12 months, the weekly earnings of salaried employees and wage-earners in manufacturing as a whole have shown a rise of $\$ 4.02$, a rise which coincides with that shown in the case of the hourlyorated wage-earners. In the heavy manuractured goods industries, tho advances amounted to \$3.71 in the case of the combined salaries and wages and to $\$ 3.73$ in the case of the hourly wages. The

[^0]See the monthly bulletins on Employment and Payrolls.
salaries-and-wages figure in the non-durable manufactured poods division has risen in the year by $\$ 4.27$, and the houriy wages, by $\$ 4.41$.

The following table gives the increases at the bepinning of February in comparison with the same dates in 1947 and 1946, in the weekly salaries-and-wages figures and the weekly wages in the reoorting manufacturing establishments generally and in certain broad categories of manufacturing:

Increases at Feb. 1, 1948, as compared with:

All Mianufacturing
Durable bianufacturing
Non-Durable Manufacturing

Feb. 1, 1946

| Sala and |  | Weekly <br> Wages |  |
| :---: | :---: | :---: | :---: |
| \$ | poc. | \$ | p.e. |
| 6.95 | 21.5 | 6.99 | 23.3 |
| 6.39 | 18.1 | 6.41 | 19.? |
| 7.40 | 24.3 | 7.47 | 27.8 |

In the period since Feb. I in 1947 and 1946, the wapes paid hourly-rated wageearners in the all-manufactures' group, and in plants turning out durable and nondurable manufactured goods showed greater advances, in terms of money and percentages, than were indicated in the more general figures of salaries and wages. The percentage changes in the figures of salaries and wafes and those of the weekly wages shown in the above comparisons, however, were reasonably comparable.

In the comparison with Feb. 1, 1945, the weakly salaries and wages in manufacturing as a whole show a rise of 19 p.e., as compared with an advance of 16.3 p.c. in the weekly wages of the employees for whom statistics of man-hours are available. In the case of the heavy manufactured goods incustrias. the increase at Feb. 1, 1948, among, salaried amplovees and waye-earners as compared with Feb. 1, 1945, was 14.2 p.c. and that among wage-earners, $11.2 \mathrm{p}, \mathrm{c}_{\mathrm{o}}$. Iru the lioht manufnctured goods division, there was a gain of 27.0 p.c. in the figure of weekly salaries and wages, as compared $\because$ ith that of $27.3 \mathrm{p} . 心$. in the weekly wages of the reported hourlymated personnel.

## 2. Non-Manufacturinf Industries.

Relatively small proportions of the employees in many of the non-manufacturing industries are paid by the hour, with the result that accurate records of the hours worked are frequently lackinf: The representation in the nonmanuiacturing industries in the monthly statistics of man-hours and hourly earnings is therefore smaller than that in manufacturing.

The situation in mining was seriously affected by the strike of coal mines in the western conl fields. The hours worked in the co-operating mines in the week of Feb. I were nevertheless higher by $8,3 \mathrm{p}, \mathrm{c}$. than those reported for the holiday week, the latest aggregate standinc at 2,671,709, as comparen with 2,46C,369 in the week of Jan. 1. The number of wage-earners, however, fell f:om 67,303 that weck, to 60,931 in the week under review, or by $9.5 \mathrm{p} . c$. There was sessonal improvement in activity in the extraction of metallic ores and non-metallic minerals. the hours reported in mining at Jan. 1 averaged 43.8 per week, as compared with 43.5 at Dec. 1, 1947, and 36.6 in the week of Jan. 1, 1948. At Feb。 1 in 1947 , 1946 and 1945 , the averages were $43.3,44.8$ and 45.8 hours, respectively. The latest average of hourly earnings was 104.5 cents, as compared with 103 cents at Dec. 1, 1947, 104.1 cants at Jan. 1, 1948, 94 cents at Feb. 1, 1947, 85, 6 cents at Feb. 1, 1946, and 83.9 cents at Feb. 1, 1945. As a result of the dispute in the westem provinces, the average hourly earnings in
coal mining declined from 115.3 conts at Jan. 1 , to 109.9 cents at the date under review, when the figure was nevertheless higher than that of 102.3 cents 12 months previously. The metallic ore civision showed an increase, from 104.3 cents at dan. 1, to 105.9 cents at the besinning of February; at Feb. 1, 1947, the average wes 94.1 cents. There was a rise in the wage-rates of employees in the non-metallic rineral group, notably in the extraction of asbestos. Local transportation, (consisting chiefly of street and electric railways) reported an increase in the aggregate and average hours worked, together with a small rise in the average hourly bamings; the latter stood at 91.1 cents, as compared with 90.3 cents at the beginning of January, and 81.1 cents at Feb 。1, 1947. In building construction, the indicated wage-earners seasonally declined, but there was an increase in the number of hours reported as compared with the aggregate in the holiday week of Jan. 1 . The hourly earnings rose from 96.6 cents a month earlier, to 93.8 cents at Feb . 1 , as compared with 87.6 cents at the same date in 194\%. In the highway construction and maintenance division, the reported number of wage-esrners was also reduced, but there were increases in the indicated totals of hours and weekly wages, with consequent advances in the average hours, the average hourly earnings, and the average weekly wages. In all branches of construction, the latest average earnings were hirher than at Feb . 1 in any earlier year of the record. In connection with the figures for these industries, it should be noted that large proportions of anskilled and casual workers are reported, as well as many highly-skilled employees at relatively hirh rates of pay.

In the service division for which data are available, the average hours advanced. rising from 41.2 in the holiday woek of Jan. 1 , to 42.6 in that of Feb. 1, as compared with 42.6 hours at the same date in 1947. The average hourly aamings were unchanged, at 55.8 cents at Feb. 1, as compared with 50.9 cents at Feb. 1, 1947, and 43.9 cents at Fob. 1, 1946. In connection with the figures for hotels and restaurants, it should be noted that the earnings do not include the value of board and lodging, frequently a part of the remuneration of persons employed in the industry.

## 3. Provincial Statistics for Leadinc Industries.

Monthly statistics of man-hours and average hourly earnings in manufacturing as a whole in the various provinces in the last 25 months are given in Table 5, while Table 6 contains figures of average weekly wages of wage-earners for whom data are available since Nov. 1, 1344. In Table 7 are shown provincial statistics of average hours and average houply earnings at Feb. 1 and Jan. 1, 1948, and Feb. 1 , 1947, for the industries employing considerable numbers of hourly-rated workers in the various provinces.

The aggregate and average hours worked in leading manufacturing establishments in all provinces in the week of Feb 。 1 showed considerable increnses as compared with Jan. 1, when holiday conditions had seriously affected the level of industrial sctivity. In Nova Scotia, there was no general change in the indicated average hours as compared with the week of Feb . 1, 1947; in New Brunswick, Quebec, Ontario and British Columbia elight recuctions in the working hours were reported, while in : initobn, Snskatchervan and Alberta, the latest averages were fractionally above those noted in the week of $\mathrm{Feb} .1,1947$. The most noteworthy change in that comparison was the decline of seven-tenths of an hour in Quebec, where shorter hours, on the average, were indicated in many branches of manufacturing.

The average hourly earnings in manufacturing as a whole in Nova Scotia, Quebec and Alberta showed small advances as compared with Jan. 1. In New Brunswick, Lanitoba, Saskatchewan and British Columbia there were slight declines in that comparison, while no general change was noted in Ontario. In all provinces, the average hourly eamings in manufacturing as a whole were considerably higher than at $F e b$. $l$ in any
earlier year. In the last 12 months, the greatest advances were those of 10.5 cents per hour in untario, 10.4 cents in Alberta, and 13.5 cents in British Columbia.

The following table gives the percentage increases in the average hourly earnings and the average weekly wages of factory wage-eamers for whom statisics are available in the various provinces at $F e b .1,1948$, as compared with the same date one and two years earlier, together wi.th the number of wage earners reported by leading manufacturers at the latest date:-

| Provinces | Hourly-Rate ${ }^{\text {a }}$ <br> Wage-Earners <br> Reported at <br> Feb. 1, 1948 | Increase in Average Hourly Earnings at Feb. 1, 1948, over |  |  | Increase in Average Weekly Wages at Feb. 1, 1948, over |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | No. | p.c. | $\mathrm{p}, \mathrm{c}$. | p.c. | p.c. | p.c. | p.c. |
| Nova Scotia | 19,605 | 10.3 | 13.4 | 10.3 | 10. 3 | 14.5 | 2.5 |
| New Brunswick | 14,533 | 10.0 | 23.3 | 24.9 | 10.0 | 22.5 | 26.6 |
| Quebec | 253,675 | 13.9 | 26.9 | 22.0 | 12.1 | 21.7 | 15.2 |
| Ontario | 381,019 | 13.1 | 28.6 | 25.2 | 12.6 | 26.2 | 17.6 |
| Manitoba | 27,345 | 9.2 | 21.0 | 24.4 | 10.0 | 20.1 | 24.7 |
| Saskatchewan | 5,124 | 12.5 | 25.4 | 29.9 | 14.3 | 27.5 | 24.9 |
| Alberta | 14,691 | 13.7 | 21.9 | 21.2 | 14.2 | 20.5 | 18.1 |
| British Columbia | 54,143 | 14.7 | 29.5 | 25.7 | 12.1 | 18.8 | 13.7 |
| Canada | 770,537 | 18.2 | 27.9 | 23.6 | 18.2 | 23.3 | 26.5 |

It should be recalled that while in ell provinces the hourly rates in most industries have risen substantially in recent months, the general rise in manufacturing in the various provinces is affected to an important extent by the industrial distributions therein. While this factor is reflected in the three-vear comparison in Nove Scotis, where the cessation of war work following the termination of hotilities resulted in very considerable elterations in the industrial distribution, it is also worthy of note that a decided fallingmoff in the length of the working week also contributed materially to the relatively small increase in the average weekly wares indicated at Feb. 1. 1948, as compored with Feb. 1.1945 , in that province.

## 4. Statistics for the Larger Citios,

Wonthly statistics of average hours worked and averaga homby earnings in manufacturing as a whole in the larger cities in the last 25 months are given in Table 8. Table 9 contains statistics of averafe weekly wages of employees for whom leading manufacturers in the larger cities furnish data on man-hours and hourly earnings, while Table 10 gives figures of average hours of work and average hoviry earnings in certain industries in these centres as at Feb. 1 and Jan. 1, 1948, and Feb. 1, 1947.

As has previously been stated, the variations in the average rates in manufacturing as a whole in the cities are partly, or largely, due to existing differences in the industrial distributions of the wage-earners for whom statistics are available; the related sex distribution constitutes another important factor.

The average hours worked in manufacturing as a whole in the cities for which data are published were considerably higher in the weok of Feb. I than they had been in the holiday week of Jan.1. In Montreal, Hamilton and Vancouver, the hours reported in manufacturing at the date under review were somewhat lower than in the same week in 1947, while in Toronto and Winnipeg, the working hours averaged slightly
above those reported for the week of Feb. I of last year.
The general averafes of hourly eamings in manufacturing as a whole in Montreal, Toronto, Hamilton and Vancouver showed further increases in the week of Feb . 1, but in Winnipeg, there was a small decline as compared with the week of Jan. 1. In all "ive centres, the hourly averoges :were higher at the date under review than at Feh. 1 in any earlier year of the comparatively brie? record.

As compared with Jan. l, the hourly averages in numerous industries within the leading cities showed small increases; in the few cases in which the trend was downarc, the declines largely resulted from changes in the distritution of wageearners within the indicated divisions. In all industries for which information is published in Table 10, the average hourly rates considerably exceeded those indicated a year ago.

The trend of average earnings in manufacturing as a whole in the leading cities has been steadily upward in recent months. The percentage increases in the average hourly earnings and the average weekly wages reported in manufacturing as a whole in the leading incustrial citics at Feb. 1. 1948, as compared with one and two years earlier, are fiver in the followint table.

| City | Hourly-Rated <br> Nage-Earners <br> Reported at <br> Feb. 1, 1948 | Increase in Average Hourly Eamings o.t Feb. 1, 1848, over Feb. ? Feb. 1 19421946 |  | $\begin{aligned} & \text { Increase in Weekly } \\ & \text { Wages at Feb. 1, } \\ & \text { 1948, over } \\ & \text { Feb. 1 Feb. } 1 \\ & 1947 \quad 1946 \\ & \hline \end{aligned}$ |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | No. | p.c. | p.c. | p.c. | p.c. |
| Montreal | 132,453 | 11.7 | 24.1 | 10.7 | 17.8 |
| Toronto | 41,560 | 14.7 | 29.1 | 15.5 | 27.2 |
| Familton | 114.236 | 13.5 | 31.6 | 12.8 | 31.0 |
| Winnipeg | 24,296 | 8.9 | 20.0 | 9.9 | 19.4 |
| Vancouver | 24,492 | 12.4 | 26.4 | 11.0 | 16.5 |

The general incraase at Feb. 1 in manufacturing in Canada as a whole as compared with 12 months earlier was 13.2 p.c. in the case of the average hourly rate, and 12.2 p.c. in the case of the average weekly wages, while in the 24 months' comparison, the Dominion average of hourly earnings shows a gain of 27 p.c., and that of weekly wages, of 23.3 p.c. The percentages of increase in the varisus provinces are given in an earlier paragraph.
(The latest igures are subjaot to revision).
