OTTAWA May 6, 1948

## EXPLANRTION OF THB TBRMS USED IN THIS RBPORT．

Waye－Earnars．－Employars are asked to furnish monthly statistics on man－ incurs on bethit of those wagenarnors for whom choy ke日p a record of aggragate hours worked，so that the date rolate，in the main，to persons employsd at hourly rates． Information for salaried employeas is purposely excluded，whilo in many casas， statistics of men－hours are not available for certain olasses of wagemarnors，whose earnings，like those of most salaried omployees，are not directily dependent upon the number of hours worked；examples of wage－sprnars frequently excluded are route drivers． piece－workers in many but not all establishornta，truck meno etco In addition，some employers do not keep a record of manohours for any classes of employeas a focordingly． the number of workers for whon atatietics are given in the present bulletin is smaller than the total number of employeos，（salariod parsonnel and wageobarnors）for whom statistics of employment and payioils are obtained in the monthly surveys on these subjects；the results of these surveys are publishad in the monthiy bulletins on employment and payroll＊，which also contain data relating to the sex distribution of the workers in recorded employnent，an impartant faotor contributing to differenoes shown in the average earaings in various industries．

The monthly statistics of average hours and average hourly earnings，like those of employmant and avarage weakly earnings relate，in the maing to ostablickonents usually employing 15 persons and ovep，the smaller firms being excluded for reasons of eoonomy in terms of cost and time．In the case of the manufacturing industries， （largely represented in the msterial of the present bullotin），the statistics relate to over $75 \mathrm{p} . \mathrm{c}$ o of all aslaikied employeas and wagemarners reported by the establish－ ments co－operating in tha montiny survays of employmant and payrolls；at the dato of tho lest Dacenrial Consus．（Juno 1,1941 ），the manufacturers furnishing monthiy data omployed apuroximatoly 93 poco of all parcons enumeratod as at work in manufacturing．

In mining and cosisteruction，data on hours and earnings are currently available for some 85 p．0．and 83 poo．of the total employees reported to the monthly surveys of employment and payroelis in those industries，respectivelys at June in 194i。 the co－operating mine operators had employed over 96 poco of all wage－aarners at work as enwarated in the Census，while the employers in conotruction whose statistice were then recoived had raportod over 19 poco of the Consus total of omployees at work in that group．It should be notad that the comparisons with the Consus figures are complicated by differences in the olassifications used in compiling the two series． 60 that the percontages of coverage are omly approxinato．

Man－Hours．－The atatistics of man－hours include overtime as well as the hours worked by part－tina and casual workers．Hours credited to persone absent on leave with pay lis the racorded pay poriod are includod in the statistics as though the hours for whifin paynent whs made had been worked．

Wages．－Tha wages reported represent gross arnings before daductions are made for taxes．linemployment liburanoe，etc．；they do notn however．include the value of board and lodiging whach in soria casos is part of tho remunoration of rorkers． Incentive and production banuses and overtine paynents are included，as are sums paid employees absent on leava with pey during the pay period for which statistics are giver． The figures of average weakly waces pesult from the multiplication of the average hours worked during the pariod of obvavation，by tho average hourly earnings reported in the ermo perind．
 perisels oxceodiris ome wesk lis saxition are roduced by the appropriato proportions to obtain for tabulation paweses the manter of hours moked and tho hourly oarnings in one week in the fncicatel pay wod；such intormation is then addsd to the data furnishod by employers win pay as a wocicly basis，so that，in all cases，the tabulated data represert，the atwuation in ons week in oach mosith。

DOMINION BUREAU OP STATISTICS
BTPICYicite and payRoll statistics branch
OTTAwA - CANADA
 WITH COMPARISONS AS AT FEB. 1, 1948, AND MAR. 1, 1947.

| Dominion Statistician: | Herbert Marshall |
| :--- | :--- |
| Director, Labour and Prices Statistics: | H.F. Greenaway |
| Chief, Employment and Payroll Statistics Branch: | M.E.K. Roughsedge |

1. Manufacturing.

There was a considerable increase in the number of hourly-rated ware-earners on the staffs of the manufacturers $/$ cooperating in tho Dominion Bureau of Statistics' monthly survey of man-hours and hourly earnings as at liar. l; in large part, this resulted from the resumption of operations on a more usual scale in certain industries which had been seriously affected by shortages of gas and power in the latter part of January and the carly part, of February. The increase in the indicated numbers of wage-eamers, which amounted to 0.3 p.c., was accompanied by a rise of $1.9 \mathrm{p} . \mathrm{c}$. in the aggregate hours worked by these employees, and of $2 . \epsilon$ poco. in their weekly wages. Data were received the the under review from 6,485 leading establishments, which stated that a total of $33,647,924$ hours had been worked by their 779,237 wage-earners, whose earnings in the final week of February were given as $\$ 29,609,113$. In their preceding retum, these firms had shown 772,458 hourly-rated wage-earners, working $33,032,972$ hours in the last week of January, for which they were paid the sum of *23,612,320.

The average hours worked were rather higher, being 43.2 in the week of liar. 1 , as compared with 42.8 in that of Feb. 1, 1948. The latest mean, however, was lower than those of $43.4,44$ and 45.5 in the week of Mar. I in 1947, 1946 and 1945, respectively

The average earrings per hour indicated at the date under review reached a new maximum, standing at 88 cents, as compared with 86.1 cents a month earlier, 77.1 cents at Mar. 1, 1947, 67.3 cents at Mar. 1, 1946, and 70.1 cents at Mar. 1, 1945. The increase in the hourly rate in the comparison with Feb, 1 resulted partly from the retum to normal working conditions in the industries temporarily affected a month earlier by shortages of fuel and partly from seasonal movements in industry, there being declines of that nature in employment for workers whose earnings were below the general average, accompanied by substantial increases amon certain classes in which the rates are above-average. The payment of higher wage-rates in certain categories was also a factor.

At the beginning of March, the reported weekly wages in manufacturing as a whole averaged $\$ 38.02$, the highest figure in the record, as compared with $\$ 37.06$ in the week ending Fen. 1, 1048, and $\$ 33.46$ in the week of liar. 1, 1547; at that date in 1946 and 1045 , the weekly averages had been 829.88 and z32.18, respectively. In the last 12 months, the weekly wares paid the $\%$ ge-earners for whom statistics of ann-hours are available have advanced by 13.6 poo.. while the rise in the 24 months was 27.2 poe., and that as compared with liner. $1,1945,18.1$ poe. It should be :noted that the figures of amines in this bulletin represent gross earnings, before doductions are made for income tar unemployment insurance contributions, etc.

[^0]Talile 1. - Average Hours Worked and Avarage Hourly Earnings of Hourly-Rated Wage-iarners in Manufacturing as a whole and in the lifanfacture of Durable Goods and of Non-Durable Goods.

## Tables.-

Statistics of average hours worked and average hourly earnings as reported by leading establishments in manuracturine as a whole in the period for which data are available, are given in Table 1 on page 2, while Table 2 on page 4 shows the figures of average weekly wages of wagemarners for whon the larger manufacturers keep record of hours vorked, together with the statistics of average weokly salaries and wages. Tables 3 to 10 at the end of this report give more detailed statistics, industrially, for Canada as a whole, together with provincial and city data on hours of work and hourly and weokly earnings.

Hours Worked - The aggregate hours wor'ed by hourly-rated wage-earners in manufacturing 0.5 a whole at har. I were stated as $33,647,924$, a total exceeding by 1.9 p.c. that of $33,032,972$ hours reported by the same firms at Feb。1. As already indicated, the higher figure was largely due to the resumption of more normal working hours in certain plants in which operations had been curtailed by shortages of fuel in the latter part of January and the first part of February. The increase due to this factor offset the tendency towards lower aggregato hours in certain other industries as a result of seasonal declines in employment. In the heavy manufactured goods division, the hours reported totalled 16,953,050 at liar. 1, as compared with 16,325,654 in the week of Feb . 1; the gain amounted to 3.8 poc. In the non-durable manufactured goods division, the indicated hours aggregated $16,634,874$, being 0.1 poc. lower than the total of $16,707,318$ hours reported by the cowoperating factories in the week of Feb. 1 .

The hours reported by leading manufacturers in the week of Mar. 1, 1948, averaged 43.2, exceeding by two-fifths of an hour the figure indicated a month earlier. As compared with liar. 1 in 1947 and 1946, however, there were decreases of one-fifth and four-fifths of an hour in the weekly average, which was lower by 2.7 hours than at lifur. 1, 1945. In plants turning out heavy manuractured goods, the latest average of hours worked, at 43.4 , was higher by seven-tenths of an hour than at, Feb. 1, but was lower by one-fifth of an hour at Mar. 1 of last year, and was also less by four-fifths of an hour than at Mar. 1, 1946. The falling-of from kar. 1, 1945, amounted to 3.1 hours. In the light manufactured goods industries, the indicated hours averaged 43, as compared with the mean of 42.3 at Feb。1, 1948. At the beginning of Narch in 1947, 1946 and 1945, the averages in this category was 43.2 hours. 43.9 hours and 45 hours, respectively.

Hourly Earnings.- The eamings of the 779, 237 hourly-rated employees on the staffs of leading manuracturers at kar. 1 amounted to $\$ 29,609,113$, exceeding by 3.5 poc. their disbursements of $\$ 28,612,320$ indicated in the preceding survey. In the durable manufactured goods industries, the weokly earnings of the reported hour ly-rated wage-earners were stated as $\$ 16,108,273$, as compared with $\$ 15,222,825$ in the wook of Feb . 1. The increase was 5.3 p .8 . In the nonedurable goods division, the hourly-ratod employees on the payrolls of the cowoperating factories received the sum of $\$ 13,500,840$ in weekly wages at har. 1, an amount exceeding by 0.3 poc. that of $\$ 13,389,495$ reported by the same firns at Feb. 1 .

The hourly earnings in manuracturing as a whole reached a new high at liar. 1 , when the average was 88 cents, as compared with 86.6 cents at Feb. 1. The Mar. 1. figure was highor by 14.1 poco than that of 77.1 cents indicated a year oerlier, and exceeded by 29.6 poc. and 25.5 p.c. the means of 67.9 cents and 70.1 cents per howe at, Mar. 1 in 1946 and 1345, respectively.

In the durable manufactured goods industrics, the tourly earnings averaged 95 cents st liar. 1, 1948, as compared with 93.2 cents at Feb. 1, 1948, 84.2 cents at Mar. 1, 1817, 74.5 conts at Fiar. 1, 1946, and 77.8 cents at Mar. 1, 1945. . Within this category the average earnings increased in the month in the Iumber, olay, .glass and stcha, electrical apparatus, iron and steal and non-ferrous metal industries.

[^1]* Sec foctnote on page 2.

The wage-earners reported in the production of non-durable manufactured goods were paid an averarg of 80.9 cents per hour. This was also tho highest in the comparatively brief record, being slightly ubove the Feb. 1 mean of 80.1 cents, and considerably htgher then those of 69.9 cents, 61.5 conts and 60.3 cents at Mar. 1, 1947, 1946 and Mar. 1, 1945, respectively. In the month, the hourly enrnines rose in many grouns in the light manufactured goods industries; among these, may be mentioned the increases reported in the enimal and vegetable food, lesther, paper products, printing and publishing, rubber, textile, bevarage, tobecco and chemical divisions. In some cases, the increnses as compared with a month earlier wore due in part to seasonal declines in employment among lower-paid workers.

Avarare Teekly Tages,- As has been pointed out in earlier bulletins, statistics of man-hours and hourly eamings are not available for all classes of wage-earners, but only for those workers for whom employers keep accurate records of hours worked, such workers being mainly, but not exclusively, those who aro paid by the hour; in general, this restriction also results in the cxclusion of salaried personnel. Among the classes of wage-earners for whom satisfactory records of hours workad are frequently mot available are piece-workers in some but not all establishments, route-drivers, delivery men, etc. It may be noted that many firms state that the earmings of their wage-earners paid at other than hourly rates exceed those of their hourly-rated personnel; this is particularly the case among piece-workers. In general, however, the wage-earners for whom statistics are given in the present bulletin fom: important proportions of the total personnel of the co-operating establishments. It the begimins of liarch, the wage-earners for whom data on manhours and hourly eamings were available made up 75.4 p.c. of the total number of persons of ali categories on the cayrolls of the manufacturersl/furnishing monthly statistics on employment and payrolis at the same date; in the heavy manufactured goods industries, the ratio was $78.7 \mathrm{p} . \mathrm{c}$. and that in the licht manufactured goods division, 72.3 p.c.

The high proportions which the hourly-mated wage-eamers constitute of the total employecs of the co-operating establishments lend interest to the comparisons in Table 2, which show the movonents in the average earnings of salaried omployees and wage-carners in the last 41 months, and those in the weekly earnings of hourlyrated wape-earners; the latter figures are obtained by multiplying the average hourly earnings in the weok of observation by the average hours worked in the same weok.

In the month, there was an increase of 80 cents in the weekly salaries-andwages figure reported at Mar. 1, as compared with that of 96 cents in the weekly earnings of hourlywated personnel. In the heavy manufactured goods industries, the co-operating factories showed an increase of $\$ 1.10$ in the salaries-and-wnges figure, and $\$ 2.43$ in the weekly earnings of the hourly-rated employees. In the non-durable manufactured goods industries, the average weekly earnings of tho persons on salaries and wages at kilar. 1 advanced by 42 conts in the month, while those of the hourly-rated personnel rose by 50 conts.

In the comparison with Mar. I of 1947, 1945 and 1945, important increases were shown in the latest figure of weekly salaries and wares and in the wages of hourlym ratied personnel, in the case of the all-manufactures' group and in both the aurable and the non-durabie manufactured goods categories, as indicated in the table on the following page.

The table shows considerable similarity in the rates of increase in the same computsons in the earrings of the combined salarieci personel and wage earners, and those of the rare-aarners for whom statistics of manmburs are available, although as compared with Mar 1 of either 194? or 1946, the advance in the wages at, Mro 1. 2948
I/ That is, of estabishments usunlly employing 15 parsons and over.
See the month?y bulletins on erployment and payrolls.
$\qquad$
was relatively rather greater than that noted in the more general figure of salaries and wages. The earnings of wace.earmars reported in the non-durable manufactured goods classes at kar, I also showcio e larger there in the three vears' comparison than was indicated in the combined salarios-and-wagos figure. In the case of the hoavy manufactured goois division, however, and in the all-industries' category, the Weekly average of the combined salarios anc wafes at liar. 1, 1948, shows a somotat larger percontage increase than was indicated in the weekly wages. This was mainly due to the diminution in orertine work paid at promium rates in the heavy manufactured goods industrios following the cessation of hostilities, but the relaxation of covernment controls on salaries, which were especially closely regulated during the war, had also had an effect.

## 2. Non Hanufacturinf Industries.

The proportions of wage-eamers in the nonumanufacturing industries who are paid by the hour are not so large as in the manufacturing cinsses, with the result that records of the hours worked in these industries are frequently not kept with accuracy. The representation of the nonmanufacturing industries in the monthly statistics of man hours and hourly earnings is therefore smaller than that in the manufacturing division.

The situation in mining as a whole in the weok of War. l was greatly improved, as a result of the settlement of the dispute in the Western coal fields. This factor was largely responsible for an increase of 6.2 p.c. in the indicated aggregate hours, which amounted to $2,837,049$ in the week of Mar. 1. The reported wage cearners rose from 60,952 at Feb. 1, to 66,181 at Mar. 1, or by $B .6$ p.Co, while their weekly wages, at $\$ 3,074,723$, were higher by 10.1 poc. The average hours in mining stood at 42.9 in the weok of Mar. 1, as compared with 43.8 in that of Feb. 1, while at Minr. 1, 1847, the average was 43.6 hours. The average hourly earnings at liar. I reached a new all-time high, standing at 108.4 cents, as compared with 104.5 cents a month oarlier, 95.1 cents at Kiar, 1, 1947, 86.4 cents at liar. 1, 1946, and 84.6 cents at Mar. 1, 1945. In the local transportation group, (consisting chiefly of streat and electric railways), there was an increase in the aggrogate and average hours reported, and in the ageregate and average earnings, but the number of wage-earners slightly declined. The average hours were 45.7, while the average hourly rate, at 91.4 cents, showed a minor increase from Feb. 1, and a gain of 9.6 cents as compared with Mar. 1, 1947.

Reduced activity was noted in building construction, in which the aggregate hours worked, the number of wege-earners and the weckly wages reported by the cooperating, firms were lower than in the week of Feb, 1. The average hours, however, stood at 41.1 in the weok of Nar, 1 , as compared with 40.1 at Feb. 1 , and also at Var. 1 of last year. The average hourly rate dechaned by oneutenth of a cont in the month, to 99.2 cents at the date under review, when the figure considerably exceeded that of 88.2 cents at, liar. 1, 1947, and the Mar. 1, 1946, average of 83.1 cents. Activity in the highway construction and mainterance division was
generally lower, there being large reductions in the number of wage-earners, and in the aggregate hours, while the reported wages remained practically unchanged. The averapes of hours worked and hourly earnings, on the other hand, were higher than was the case a month earlier. As compared with Mar. 1 of last year, there was a decline in the aurage hours, together with an increase of 13.5 cents in the average hourly rate, which stood at 80.9 cents at tho date under review. In connection with the figures for these industries, it should be noted that large proportions of unskilled and casual workers are employed, as well as many highly-skilied tradesmen.

In the branches of the service division for which statistics are available, the average hours rose from 42.6 in the week of k'eb, 1, to 43 in that of Mar. 1, as compared with 43.3 hours at the same date in 1947. The average hourly earnings also advanced, from 55.8 cents at Feb. 1, to 56.6 cents at Mar. 1, as compared with 51.5 cents at Har. 1, 1947, and 44.1 cents at Liar. 1, 1946. In connection with the figures for hotels and restrurants, it should be noted that the indicated earnings do not include the value of board and lodeing. frequently a part of the remuneration of persons employed in the industry.

## 3. Provincial Statistics for Leading Industries.

Konthly statistics of man-hours and average hourly earnings in manufacturing as a whole in the various provinces in the last 25 months are given in Table 5 , while Table 7 contains provincial figures of average weekly wages of wage erarners for whom data are available since Nov. 1, 1044. In Table 9 are shom provincial statistics of average hours and average hourly aarnings at Feb .1 and Nar. 1, 1948, and har. 1, 1947, for the menuracturing incustries employing representative numbers of hourlyroted morters in the verious provinces.

Tha sevag hosws woiked in leading, manufacturing establishments in Nova Scotia, Nanitoba and halerta, in the woek of liar. I were rather lower than in the week ending Feb. 1. No general change was indicated in Saskatchewan, while the reported hours in New Brunswick, Quebec, Ontario and British Columbia were higher on the average. In Ontario, the indicatod increase of half an hour was largely due to the resumption of more normal working conditions in plants which has been seriously affected by shortafes of pas and power a month earlier. As compared with Mar. 1. 1947, there were declines in the average hours worked in leading manufacturing establishments in Nova Scotia, New Brunswick, Quebec and in Saskatchewan, Alberta and British Columbia. The reduction of 1.7 hours in British Columbia was greatest. In Ontario, an increase of one-tenth of an hour was indicated in the average working time in the last 12 months.

The average hourly earnings in manufacturing as a whole in all provinces except Manitoba showed increases as compared with Feb. 1. In Manitoba, there was a docline of onoufifth of a cont in the month. Without exception, the provincial averages of hourly earnings in manufacturing as a whole were higher than at Mar. 1 in any earlier year. As compared with Mar. 1, 1947, the most pronounced increases were those of 11.3 cents per hour in Ontario, and 13 cents in British Columbia.

The table on the folloving page gives the percentage increases in the averape hourly earnings and the average weekly wages of wage-earners in manuiacturing for whom statistics are available in the various provinces at kiar. 1, 1948, as compared with the same date one, two and three years earlier, together with the number of wage-gamers reported by leadine manufacturers at the latest date.

It shoill be recalleci that while in all provinces the hourly rates in the matity of industrics have risen substantially in recent menths, the feremi oduaces in manufacturing are sffceived to an important extco: br the industrisl distributiou within the variols provinces.

## 4. Statistics for the Iurger Cities.

Monthly statistics of average hours worked and average hourly earnings in manufacturing as a whole ir the larger cities in the last 25 months are given in Table 6. Table 8 contains statistics of average weekly wages of employees for whom leading manufacturers in the larger cities have furnished data on man-hours and hourly earninps in the period since Nov. 1, 1944, while Table 10 gives data on average hours of work and average hourly earnings in certain industries in these centres as at Mar. 1 and Feb. 1, 1948, and Lar. 1, 1947.

As has previously been stated, the variations in the average rates in manuftac. turing as a whole in the cities are partly, or largely, due to existing differences in the industrial distributions of the wage-ernors for whom statistics are available; the related sex distribution constitutes another important factor.

The average hours reported in manufacturing as a whole in Montreal and Toronto were higher by seven-tenths and one tenth of an hour, respectively, in the week of Mar. 1 than in that of Feb. 1. In Hanilton, "Ninnipeg and Vancouvar, however, there were fractional declines in the working hours reported in manufacturing at the date under review. In liontresl, Toronto and Winnipeg, the average working hours then indicated slightly exceeded those reported for the week of Mar. 1 of last year, but in Hamilton and Vancouver, there were declines in that comparison.

The general average of hourly earnings in manufacturing as a whole in Montreal, Toronto, Hamilton and Vancouver showed increases in the week of har. 1 , When there was a fractional decline as compared with the week of Feb. 1 in Minnipeg. In all five centres, the hourly averages were decidedly higher at the date under review than at Mar. I in any earlier year of the brief record.

In almost all cases, the hourly averages in the various industries within the leading cities showed moderate increases from the week of Feb. 1. In all industries for which information is published in Table 10, the average hourly rates acascarably exceeded those indicated a year ago.

The trend of average earmings in manuracturing as a whole in the leading, at1a: has been steadily upward in recent months. The percentace increases in the average hourly earnings and the average weokly wafes roported in manufncturing as a whole in the leading industrial cities at lar. 1 , 1948, as compared with one, two and three years earlier, are given in the table on the following page.
$\bullet$
$\qquad$

As has previously been indicated, the rates of gain in particular cities are greatly influenced by the industrial distribution of the reported wage-earners. The general advance at Mar. I in manufacturing in Canada as a whole as compared with 12 months earlier was $14.1 \mathrm{p} . \mathrm{c}$. in the case of the average hourly rate, and $13.6 \mathrm{p.c}$. . in the case of the sverage weekly wrge, while in the 24 months' comparison, the Dominion average of hourly earnings shows a gain of 29.6 p.c., and that of weekly wages, of $27.2 \mathrm{p} . c$. The percentages of increase in the various provinces are given in an earlier paragraph.
