## AVERAGE HOURS WORKED

## AND

AVERAGE HOURLY EARNINGS

## AS REPORTED

## AT THE BEGINNING OF

APRIL, 1948

Wage-Rarners.- Employers are asked to furnish monthly statistics on manhours on behalf of those wage-aarners for whom they keep a record of aggregate hours worked, so that the data relate, in the main, to persons amployed at hourly rates. Information for salaried employees is purposely oxcluded, while in many cases, statistics of man-hours are not available for oertain olasses of wage-oarnors, whose earnings, like those of most salaried emplayees, are not directly dependent upon the mumber of hours worked; examples of wage-aprners frequently excluded are route drivers, piece-workers in many but not all establishnents, truck men, otc. In addition, some omployers do not koop a record of man-hours for any classes of employees. Accordingly. the number of workers for whom statistics are given in the present bulletin is smaller than the total number of employees, (salaried personnel and wagecearners) for whom statistics of employment and payrolls are obtained in the monthly surveys on these subjeots; the results of these surveys are published in the monthly bulletins on employment and payrolls. which also contain data relating to the sax distribution of the workers in recorded employment, an impartant factor contributing to differences shown in the average earnings in various industries.
thish - 4 The monthly dthtistics of average hours and average hourly earnings, like those of amployment and avorage weokly oarnings rolato, in the main, to ostablishments usually employing 15 persons and over, the smaller firms betrg exoluded for reasons of economy in terms of cost and time. In the case of the manufacturing industries, (largely represented in the material of the present bullotin), the statistics relate to over 75 poco of all salaried employeos and wage-earners reported by tho establishments co-operating in the monthly surveys of employment and payrolls; at the date of the last Decemial Census, (June $1,2,941$ ), the manufacturers furnishing monthly dete employed approximately 93 p.co of all porsons onumeratod as at work in manufacturing.

In mining and construction, data on hours and earnings are currently available for some 85 p .0 . and 83 p .0 .0 of the total employees reported to the monthly surveys of employment and payrolls in those industries, respectively; at June 1, 1941, the co-operating mine operators had employed over 96 p.c. of all wage-earners at work as enumerated in the Census, while the employers in construction whose statistios were then received had reported over 79 poc. of the Census total of employees at work in that group. It should be noted that the comparisons with the Census figures are complicated by differences in the olassifications used in oompiling the two series, so that the percentages of coverage are only approximate.

Man-Hours.- The statistics of man-hours include overtime as well as the hours worked by part-time and casual workers. Hours oredited to persons absent on leave with pay in the recorded pay period are included in the statistics as though the hours for which payment was mado had been worked.

Wages.- The wages reported represent gross earnings before deductions are made for taxes, unemployment insurance, etc.; they do not, however, include the value of board and lodgitg which in some cases is part of the remuneration of workers. Incentive and produotion bonuses and overtime payments are included, as ars sums paid employees absent on leave with pay during the pay period for which statistics are given The figures of average weokly wages result from the multiplication of the average hours worked during the perlod of observation, by the average hourly earnlags reported in the same period.

Pay Porlods.- Statistice of man-hours and hourly wages reported for periods exceoding ono wook in duration are reduced by the appropriate proportions to obtain for tabulation purposes the number of hours worked and the houriy earnings is one weok in the indicated pey period; suoh information is then addod to the data furnishod by employers who pay on a woekly basis, so that, in all cases, the tabulated data ropresent the situation in one week in each month.

# DEPARTRENT OF TRADE AND COMMERCE DOMINION BUREAU OF STATISTICS EMPIOMENT AMD PAYROLL STATISTICS BRANCH DTANA - CANADA 

SEATYSRTCS OP WAl-ZDO:S, HOURLY BARNTNGS AND WEMKLY WAGES AS REPORTED

Dominion Statistician:<br>Director, Labour and Prices Statistics: Chiof, Employment and Payroll Statistics Branch:<br>Herbert Larshall<br>H.F. Greenway<br>M.E.K. Roughsedge<br>1. Kanufacturing

The trend of employment among hourly-rated wage-arners employod in leading manufacturing plants was moderately downard at Apr, l as compared with Mar. 1; the hours which they worked and their hourly wages were also lower, the declines being due in part to the celebration of the Easter holidays. The latest survey of manhours and hourly earninps made by the Dominion Bureau of Statistics showed a total of 777,540 hourly-rated wage-earners on the steffs of the 6,390 factories furnishing data, in which the hours worked in the week preceding Apr. 1 numbered 32,350,929, while the wages paid for services rendered in these hours amounted to $\$ 28,759,531$. At Mar. 1, the same plants had employed 780,408 hourly-sated wage-earners, working $33,714,821$ hours, for which they received $\$ 29,658,702$. There was accordingly a decrease of 0.4 p.c. in the number of their wage-earners paid at hourly rates, accompanied by that of three p.c. in their aggregate weekly wages, while the reported hours showed a reduction of four poc.

There was a considerable decline in the average hours worked, from 43.2 in the week of Mar. 1, to 41.6 in that of Apr. 1, 1948. At the same date in 1947, 1946 and 1945, the averages had been $43.2,44.4$ and 43.6 , respectively; the 1945 figure had also been lowered by the observance of the Easter holidays, but those in 1946 and 1947 were not affected by that factor.

The average hourly earnings reported at the beginning of April, at 88.9 cents, were higher than in any earlier survey, exceoding by nine-tenths of a cent the Mar. i figure, previously the maximum in the comparatively brief record. At Apr. 1 in 1947, 1946 and 1945, the means had been 77.6 cents, 68.4 cents and 70.4 cents, respectively. The increase in the hourly rate in comparison with Mar. 1 was partly due to seasonal movements in industry, there being some curtailment of this character in the number of workers reported in groups where the earnings tend to be below the general average, accompanied by expansion in the number of wage-earners in the higher-paid categories. The upward revision of wage-rates in certain cases was also a factor, as was the pryment of overtime rates in some industries on the Good Friday holiday.

In manuracturing as a whole, the weokly wages averaged $\$ 36.98$ at the beginning of' Arril, as compared with $\$ 38.02$ in the week onding liar. $1,1948, \$ 33.52$ in the week of Apro 1, 1947, $\$ 30.37$ in the weok of Apr. 1, 1946, and $\$ 30.69$ in that of Apr. 1 . 1945, when the observance of Easter had also affected the reported figures. The general increase in manufacturing in the 12 months amounted to 10.3 p.c.; in the 24 months' and the 36 months comparisons the advances were 21.8 p.c. and 20.5 p.c. respectively. The figures in this bulletin represent gross earnings, before deductions are made for taxes, unemployment insurance contributions, etc.

## TABLES.

The statistics of average hours worked and average hourly earnings in manufac-

* The averages at these dates were affected by loss of working time at the year-end holidays in the case of Jan. 1, and by the Easter holidays in the case of
Apr. 1, 1948 and 19453 and May 1, 1946.
turing as a whole as reported by leading establishments in the period for which data are available are given in Table 1 on page 2, while $T$ able 2 on page 4 shows the figures of average weekly wages of wage-earners for whom the larger manufacturers keep a record of hours worked, together with statistics of average weekly salaries and wages in the same period. Tables 3 to 10 at the end of the report give more detailed statistics, industrially, for Canada as a whole, together with provincial and city data of average hours of work and average hourly earnings.

> HOURS HORKED.

The aggregate hours worked by hourly-rated wage-earners in leading manufacturing establishments at Apr. 1, were stated as $32,350,929$, a total less by four p.c. than that of $33,714,821$ hours reported by the same firms at Mar. 1 . As already indicated, the lower figure at the date under review was due in part to the loss of working hours during the Easter holidays, while curtailment in employment was also a factor. The total of hours reported in the animal food industries was higher in the week of Apr. 1 than in that of Mar. 1 , but there were declines in that comparis on in many industrial groups within the manufacturing category, those in lumber, vegetable food, textile, paper product, rubber, iron and steel and non-ferrous metal plants being particularly noteworthy.

In the durable manufactured goods division taken as a whole, the indicated hours aggregated $16,454,585$ in the week of Apr. 1, showing a loss of 3.1 p.c. as compared with the total of $16,974,114$ worked in the same plants in the week of Mar. 1. In the light mamufactured goods division, the hours were reported as $15,896,344$, as compared with $16,740,707$ worked in the co-operating establishments in the week of Mar. 1. In this comparison, there was a decline of five p.c.

The hours reported in manufacturing as a whole in the week of Apr. 1, 1948, averaged $41.6,-1.6$ hours less than in the weok of Mar. 1. As compared with Apr, 1, 1947, there was also a decrease of 1.6 hours in the weokly average, while the decline in comparison with Apr. 1, 1946, amounted to 2.8 hours. In factories turning out heavy manufactured goods, the hours worked, on the average, were also less by 1.6 hours than in the week of liar. 1, the latest mean being 41.8 hours per week; this figure was lower by 1.6 hours than at Apr. 1 of last year, and by 2.8 hours than at Apr. 1, 1946. In the light manufactured goods industries, the reported hours averaged 41.4, as compared with 43.0 at Mar. 1, 1948, 43.1 at Apr. 1, 1947, 44.2 at Apr. 1, 1946, and 42.7 at Apr. 1, 1945. In 1945, the April figures had also been affected by the Easter holidays.

## HOURLY EARNINGS.

The sum of $\$ 28,759,531$ was paid to the hourly-rated wage-8amers employed by the co-operating manufacturers at Apr. 1, an amount lower by three p.c. than that of $\$ 29,658,702$ which they had disbursed at Mar. 1. In the durable manufactured goods industries, the weekly earnings of hourly-rated employees in the larger plants were given as $\$ 15,725,515$, a decline of $2.5 \mathrm{p} . \mathrm{c}$. as compared with their payments of $\$ 16,127,721$ in the week of Mar. 1. In the non-durable manufacturing industries, the hourly-rated wage-carners on the staffs of the co-operating manufacturers receivod the sum of $\$ 13,034,016$ in weekly wages at Apr. 1. As compared with $\$ 13,530,981$ reported at Mar. 1, there was a decrease of 3.7 p.c.

The hourly earnings in manufacturing as a whole reached a new maximum at Apr, 1, the average being 88.9 cents, as compared with 88 cents at liar. $1,77.6$ cents at Apr. 1, 1947, 68.4 cents at Apr. 1, 1946, and 70.4 cents at Apr. 1, 1945. In the last 12 months, there has been an increase of 14.6 p.c. in the hourly average, while the rise in the two years amounts to $30 \mathrm{p} . \mathrm{c}$., and that in the 36 months' comparison, to 26.3 p.c.

1/ Exclusive of electric light and power. * See footnote on page 2.

In the durable manufactured goods industries, the latest average of hourly earnings was 95.6 cents, as compared with 95 cents at Mar。 $1,1948,84.8$ cents at Apr. 1, 1947, 75.1 cents at Apr. 1, 1946 and 78 cents at Apr. 1, 1945. Within this category, there were small increases in the month in the lumber, clay, glass and stone, electrical apparatus, iron and steel and non-ferrous metal industries.

In plants turning out non-durable manufactured goods, the reported hourly-rated personnel received an average of 82 cents per hour. This was the maximum in the record of $3 \frac{1}{2}$ years, exceoding by 1.2 conts the average of 80.8 cents at kir. 1,1948 , previously the highest figure indicated. As compared with the means of 70.5 cents at Apr. 1, 1947, 61.8 cents at Apr. 1, 1946, and 60.9 at Apr. 1, 1945, there were increases of 16.3 p.c., $\quad 32.7$ p.c. and 34.6 p.c., respectively. The hourly earnings rose at Apr. 1 as compared with Mar. I in several groups in the non-durable manufactured goods industries; among these may be mentioned the meat products, boot and shoe, vegetable food, paper products, printing and publishing, rubber, textile, tobacco, beverage and chemical divisions. In some instances, the advances as compared with a month earlier resulted from seasonal causes.

> AVERAGE TEEKLY TAGES.

As has previously been stated, data on man-hours and hourly oarnings are not available for all classes of wage-earners, but only for those workers for whom leading employers keep accurate records of hours worked, such morkers being mainly those who are paid by the hour; in general, this restriction results in the exclusion of salaried personnel. Among the classes of wage-earners for whom satisfactory records of hours worked are frequently not available are piece-workers in some but not all establishments, route-drivers, delivery men, etc. It may be noted that many firms state that the earnings of their wage-earners paid at other than hourly rates exceed those of their hourly-rated personnel; this is particularly the case anong piece-workers in certain industries. In general, however, the wageearners for whom statistics are given in the present bulletin form important proportions of the total personnel of the co-operating establishments. At the beginning of April, the wage-earners for whom data on man-hours and hourly earnings were available made up 75.5 p.c. of the total number of persons of all categories on the payrolls of the manufacturers $1 /$ furnishing monthly statistics on employment and payrolls at the same date; in the heavy manufactured goods industries, the ratio was 78.5 p.c. and that in the light manufactured goods division, 72.3 p.c.

The large proportions which the hourly-rated wage-earners constitute of the total employees of the co-operating establishments lend interest to the data in Table 2, which show the fluctuations in the average weekly earnings of salaried employees and wage-earners in the last 42 months, and those in the wages of hourlyrated wage-earners; the latter figures are obtained by multiplying the average hourly earnings in the week of observation by the average hours worked in the same week. In the month, there was a decrease of 67 cents in the weekly salaries-andwages figure reported at Apr. 1, as compared with that of $\$ 1.04$ in the weekly wages of hourly-rated personnel. In the durable manufactured goods industries, the cooperating factories showed a reduction of 99 cents in the month in the salaries-and-wages figure, and of $\$ 1.27$ in the weekly earnings of the hourly-rated employees. In the light manufactured goods industries, the average weekly carnings of the persons on salaries and wages at Apr. I declined by 40 cents from Mar. 1, while those of the hourly-rated personnel fell by 79 cents. As has already been explained, the lower figures at the date under review are associated with the observance of the Easter holidays.

In spite of the losses resulting from lowered industrial activity during the Easter season, there were decided increases in the weokly salaries-and-wages figure and in the eamings of hourly-rated personnel as compared with Apr. 1 of last year, 1/That is, of establishments ordinarily employing 15 persons and over.

See the monthly bulletins on Employment and Payrolls.
and also as compared with the same date in 1946 and 1945, important gains being indicated in all branches of the heavy and the light mannfactured goods industries. The percentage advances are shown in the following table for broad divisions:-

Increases at Apr. 1, 1948 as compared with:-

It will be noted that in the last 12 months, the changes in the hourly wages and in the weekly salaries and wages have boen very similar. In the comparison with Apr. 1, 1946, the figures of weokly wages show rather greater percentage increases than were indicated in the more general averages of salaries and wages combined. In the heavy manufactured goods industries, and in manufacturing as a whole, there were somowhat larger advances at the beginning of April, 1948, over the same date in 1945, in the salaries-and-wages figure than in the weekly wages, glthough the opposite was the case in the light manufactured goods industries. The disparities in the rates of increase were small, but it may be noted that in the durable manufactured goods category, the relatively smaller rise in the wages in the three years was associated with a decline in the amount of overtime work, while in the non-durable goods division, the greater availability of labour and materials, together with relaxation of controls on salaries and wages, have contributed to the rather larger advances shown in the rates of increase in the average weakly wages.

## 2. Non-Manufacturing Industries.

Smaller proportions of the wage-earners in the non-manufacturing industries are paid by the hour, with the result that accurate records of the time worked in these classes are frequently lacking. The representation in the non-manufacturing industries in the monthly statistics of man-hours and hourly earnings is therefore smaller than that in the manufacturing division.

Greater activity was shown in mining as a whole in the week of Apr. 1 , dus in part to the final settlement of the dispute in the Western coal fields since the date of the preceding report. There was also increases as compared with Mar. I in the numbers of employees and in the aggregates of hours and wages indicated in the extraction of other non-metallic minerals and of metallic ores. The average hours reported by leading employers in mining as a whole, however, were rather lower than at that date, or at Apr. 1, 1947. Standing at 110.7 cents, the latest hourly rate was the highest in the record, considerably exceeding that of 95.8 cents at Apr. 1 , 1947, 86.3 cents at Apr. 1, 1946, and 84.3 cents at Apr. 1, 1945. The average weokly wages were $\$ 46.83$, a new maximum figure. The increases in the hourly and weekly earnings in coal mining were especially marked.

In the local transportation group, (consisting chiefly of street and electric railways), the aggregate hours and earnings were somewhat lower, but the average earnings rose slightly, from 91.7 cents at Mar, 1 to 92.4 cents at the date under review, as compared with 82.1 cents a year ago. The hours worked, on the average, declined from 45.5 at Nar. 1, to 44.4 in the week of Apr. l. Persons employed at hourly rates by the co-operating building contractors worked an average of 37.8 hours in the latest period of observation, which included the Easter holidays, as compared with 41.2 hours in the week of Mar. l, when the hourly earnings stood at 98.9 cents, as compared with 99.2 ents at Apr. 1 of the present year, and 88.1 cents

12 months earlier. In the highway construction and maintenance division, there was a small increase in the number of workers, whose average of hours worked fell from 39.8 in the preceding survey, to 36.6 at the beginning of April. Their average hourly rate, however, advanced from 80.7 cents at har. 1 to 81 cents at Apr. 1 , when it was higher than the mean of 69.2 cents a year earlier. In regard to the figures for these industries, it should be noted that large proportions of unskilled and casual workers are employed, as well as many highly-skilled tradesmen, particularly in the building construction division.
fiotels and restaurants reported a fractional increase in the working hours as compared with those reported a month ago, but the latest average earnings were slightly lower. The rate in laundries and dry-cleaning establishments advanced from 59.0 cents at Mar. 1 to 59.4 cents at Apr. l, when it was a good deal higher than that of 52.7 cents at Apr. 1, 1947.

## 3. Provincial Statistics for Leading Industrias.

Monthly statistics of man-hours and average hourly earnings in manufacturing as a whole in the various provinces in the last 25 months are given in Table 5 , while Table 7 contains provincial figures of average weekly wages of wage-earners for whom data are available since Nov. 1, 1944. In Table 9 are shown provincial statistics of average hours and average hourly earnings at Apr. 1 and Mar. 1, 1948, and Apr. 1, 1947, for the manufacturing industries employing representative numbers of hourly-rated workers in the various provinces.

In all provinces except Saskatchewan, the average hours worked by hourly-rated wage-earners in manufacturing generally were somewhat lower at the beginning of April than in the weok of Mar. 1, the falling-off being due to a considerable extent to the observance of the Easter holidays. As compared with the week of Apr. 1 of last year, which did not include the Good Friday holiday, the average hours reported in manufacturing at the date under review were also lower in all provinces except Saskatchewan, where the average was the same.

|  | Increase in Average Hourly Earnings at Apr. 1, 1948, over |  |  |  | o in A Nages 1948, Apr. 1 1946 | rage <br> rer Apr. 1, 1945 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| No. | p.c. | p.c. | p.c. | p.c. | p.c. | p.c. |
| Nova Scotia 19,097 | 7.6 | 18.4 | 13.3 | 4.5 | 11.9 | 3.3 |
| New Brunswick 14,849 | 12.8 | 25.4 | 26.4 | 6.8 | 17.2 | 23.0 |
| Quebec 254,744 | 15.2 | 29.4 | 24.2 | 9.3 | 19.1 | 18.1 |
| Ontario 386,681 | 14.7 | 31.5 | 28.4 | 11.7 | 25.1 | 23.9 |
| Manitoba 26,988 | 9.5 | 21.8 | 25.0 | 8.0 | 17.9 | 23.6 |
| Saskatchewan 4,763 | 13.9 | 26.3 | 30.6 | 13.9 | 29.0 | 35.5 |
| Alberta 14,144 | 14.2 | 24.7 | 21.8 | 11.6 | 22.1 | 18.7 |
| British Columbia 55,797 | 14.4 | 31.3 | 26.0 | 6.0 | 16.7 | 14.1 |
| CANADA 777,540 | 14.6 | 30.0 | 26.3 | 10.3 | 21.8 | 20.5 |

Except in Saskatchewan, the average hourly earnings in manufacturing as a whole showed an upward movement at Apr. 1 as compared with Mar. 1, 1948. The greatest riseswere those of 2.2 cents and 1.9 cents in Nova Scotia and New Brunswick, respectively. As compared with Apr. 1, 1947, there were general increases in the average hourly earnings, as follows:- Nova Scotia, 5.8 cents; New Brunswick, 9.1 cents; Quebec, 10.6 cents; Ontario, 12 cents; Manitoba, 7.4 cents; Saskatchewan, 10.9 cents; Alberta, 11 cents and British Columbia, 13.4 cents.

The above table gives the percentage increases in the average hourly eamings
and the average weekly wages of wage-earners in manufacturing for whom statistics are available in the various provinces at Apr. 1, 1948, as compared with the same date one, two and three years earlier, together with the number of wage-earners reported by leading manufacturers at the latest date. While the hourly rates in all provinces have risen substantially in recent months in a majority of industries, the general advances in manufacturing are affected to an important extent by the industrial distribution within the various areas.
4. Statiatios yor the Larger Cities.

Monthly statistics of average hours worked and average hourly earnings in manufacturing as a whole in the larger cities in the last 25 months are given in Table 6. Table 8 contains statistics of average weekly wages of employees for whom leading manufactures in the larger cities have furnished returns on manhours and hourly earnings since Nov. 1, 1944, while Table 10 gives data on average hours of work and average hourly earnings in certain industries in these centres as at Mar. 1 and Apr. 1, 1948, and Apr. 1, 1947.

As has previously been stated, the variations in the averare hourly earnings in manufacturing as a whole in the cities, as in the provinces, are partly or largely due to the differences which are found in the industrial distributions of the wage-eamers for whom statistics are available; the related sex distribution is another important factor contributing to the differences.

In all five centres for which monthly statistics are published, the general average of hours worked by the hourly-rated personnel reported in manufacturing was lower in the holiday week of Apr. I than in that of Mar. 1; also in each of these cities, there were reductions in the average time worked as compared with the week of Apr. 1, 1947, in which the Easter season did not fall.

There were general increases as compared with month earlier in the average hourly earnings in manufacturing as a whole in each of the above-named cities. The largest increase was that of 1.2 cents por hour in ifinnipeg. As compared with Apr. 1, 1947, there were widespread rises in the average hourly earnings in the leading cities. These increases were as follows:- Montreal, 9.7 cents; Taronto, 11.6 cents; Hamilton, 12.3 cents; Winnipeg, 7.1 cents, and Vancouver, 13.1 cents.

With continued increases in the cost of living, the movement in the average earnings of persons employed in leading establishments in the larger cities has beer steadily upward in recent months. The percentage increases in the average hourly earnings and the average weekly wages of hourly-rated wage-earners roported in manufacturing as a whole in the leading industrial cities at Apr. 1, 1948, as compared with the same date one, two and three years earlier, are given in the following table:-

| City | Hourly-Rated Wage-Earners Reported at Apr. 1, 1948 | Increase in Average Hourly Earnings at Apr. 1, 1948, over |  |  | Weekly Wages at Apr. 1, 1948, over |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | No. | p.c. | p.c. | p.c. | p.c. | p.c. | p :c. |
| Montreal | 131,703 | 13.0 | 25.9 | 20.7 | 8.0 | 15.8 | 14.1 |
| Toronto | 114,589 | 14.2 | 30.4 | 26.3 | 11.2 | 23.0 | 24.2 |
| Hamilton | 41,754 | 14.4 | 34.8 | 29.4 | 13.9 | 31.0 | 25.5 |
| Winnipeg | 23,851 | 9.2 | 21.3 | 23.9 | 7.9 | 17.9 | 21.1 |
| Vancouver | 24,620 | 14.2 | 30.6 | 22.7 | 5.1 | 17.9 | 11.3 |

As already mentioned, the rates of gain in particular cities are greatly influenced by the industrial distribution of the reported wage-earners. In Canada
as a whole, the general rise in manufacturing as compared with 12 months earlier was 14.6 p.c. in the case of the average hourly rate, and 10.3 p.c. in the case of the average weekly wages, while in the 24 months' comparison, the Dominion average of hourly earnings shows a gain of 30 p.c., and that of weekly wages, of $21.8 \mathrm{p} . \mathrm{c}$. The percentages of increase in the various provinces are given in a precoding paragraph.
(The latest figures are subjeot to revision).
