## AVERAGE HOURS WORKED

#### Abstract

AND

AVERAGE HOURLY EARNINGS

AS REPORTED

## AT THE BEGINNING OF

JULY, 1948

Wage-Sarners.- Smployers are asked to furnish monthly statistics on manhours on behalf of those wage-earners for whom they keep a reoord of aggregate hours worked, so that the data relate, in the main, to persons omployod at hourly rates. Information for salaried employees is purposely excluded, while in many oases, statistics of man-hours are not available for cortain olasses of wage-oarnors, whose earnings, like those of most salaried employees, are not directly dependent upon the mumber of hours worked; examples of wagemarnors frequently exoluded are route drivers, piece-workers in many but not all establishnents, truck men, etc. In addition, some employers do not keep a record of maj-hours for any classes of employees. Acoordingly, the number of workers for whom atatistios are given in the present bulletin is smaller than the total number of amployees, (salaried personnel and wage oarners) for whom statistics of employment and payrolls are obtained in the monthly surveys on these subjects; the results of these surveys are published in the monthly bulletins on employment and payrolls, whioh also contain data relating to the sex distribution of the workers in recorded employment, an important factor contributing to differenoes shown in the average earnings in various industries.

The monthly statistics of average hours and average hourly earnings, like those of employment and average weokly oarnings relate, in the main, to ostablishments usually employing 15 persons and over, the smaller firms boing excluded for reasons of economy in terms of cost and time. In the case of the manufacturing industries, (largely represented in the material of the present bulletin), the statistics relate to over 75 p.c. of all salariod employees and wage-earners reported by the establishments co-operating in the monthly surveys of employment and payrolls; at the date of the last Deoonnial Census, (June 1, 1941), the manufacturers furnishing monthly data employed approximately 93 p.o. of all persons onumerated as at work in manufacturing.

In mining and construction, data on hours and earnings are currently available for some $85 \mathrm{p} . \mathrm{c}$, and $83 \mathrm{p} . \mathrm{o}$. of the total employees reported to the monthly surveys of employment and payrolls in those industries, respeotively; at June 1, 1941, the oo-operating mins operators had employed over 96 p.c. of all wage-earners at work as enumerated in the Consus, while the employers in construction whose statistics were then reooived had reported over 79 p.c. of the Census total of employees at work in that group. It should be noted that the comparisons with the Census figures are complicated by differences in the olassifications used in compiling the two series, so that the percentages of coverage are only approximate.

Man-Hours.- The atatistics of man-hours include overtime as well as the hours worked by part-time and casual workers. Hours credited to persons absent on leave with pay in the recorded pay poriod are included in the statistics as though the hours for which payment was made had been worked.

Wages.- The wages reported represent gross earnings before deduotions are made for taxes, unomployment insuranoe, etc.; they do not, however, include the value of board and lodging which in ome cases is part of the remuneration of workers. Inoentive and production bonuses and overtime paynents are inoluded, as are sums paid employees absont on leave with pay during the pay period for which statistics are given. The figures of average weokly wages result from the multiplioation of the average hours worked during the period of observation, by the average hourly earninge reported in the same period.

Pay Periods - Statistice of man-hours and hourly wages reported for periods exceeding one week in duration are reduoed by the appropriate proportions to obtain for tabulation purposes the number of hours worked and the hourly earnings in one week in the indicated pay period; such information is then added to the data furnishod by employers who pay on a weekly basis, so that, in all oases, the tabulated data represent the situation in one week in esch month.

## 1. Manufacturing.

The average hours worked in leading manufacturing estabiishments in the week of July 1 showed an increase, due to a more normal level of activity than was reported in the week of June 1, when the pay period reported by many establishments had included the Victoria Day holiday. The latest average was 42 hours, as compared with 41.7 hours at June 1, 1948, 42 at July 1, 1947, 42.4 at July 1, 1946, and 44.3 at July 1, 1945. The aggregate hours worked by the hourly-rated wage-earners employed in the larfer factories increased by 2.3 p.c. in the week of July 1, when the number of wage-earners rose by 1.5 p.c. as compared with the week of June 1 . The average hourly earnings of the reported wage-earners at July 1 were 92.4 cents. This was the highest figure in the record of 45 months. The June 1 average, previously the maximum, was 91.4 cents; at July 1 in 1947,1946 and 1945, the averages were 80.8 cents, 70 cents and 70.1 cents, respectively. The figure at the date under review therefore showed an increase of 14.4 p.c. as compared with a year earliar, of 32 p.c. in the 24 months' comparison, and of 31.3 p.c. over July 1, 1945, when war work had been a factor of considerable weight.

The average woekly wages of the hourly-iated personnel employed by leading manufacturers at July 1 amounted to $\$ 38.81$. This was rather higher than the June 1 figure of $\$ 38.11$, and also exceeded the May 1 figure of $\$ 38.53$, which was the previous maximum in the record of 45 months. The general averages in manufacturing at July 1 in earlior years were: $1947, \$ 33.94 ; 1946, \$ 29.58$ and $1945, \$ 31.05$. The latest figure showed an increase of $14.3 \mathrm{p} . \mathrm{c}$. as compared with 12 months ago, of 30.8 p.c. in the two-year comparison, and of $25 \mathrm{p} . \mathrm{c}$. over the June l, 1945, average. In all cases, the figure quoted represent cross earnings, before deductions for taxes, unemployment insurance contributions, etc.

## TABLSS:

The statistics of average hours worked and averafe hourly eamings in manufacturing as a whole as reported by leading establishments in the period for which data are available, are given in Table 1 on page 2, while Table 2 on page 4 shows since Nov. 1, 1944, the figures of averace woekly waces of wace-earners for whom the larger manufactarers keep a record of hours worked, together with statistics of average weokly salarics and wages in the same period. Table 3 toward the end of the report fives the industrial distribution of the wage-earners for whom statistics were available at the date under review, piving their average hours of work, their average hourly earnings and their average weekly wagos, with comparative averages as at June 1, 1948, and July 1, 1947. Tablos 4 to 8 provide monthly statistics for a period of some duration for certain industries and for the provinces and cities, while in Tablos 9 and 10 are given industrial data on average hours and average hourly earnings in the provinces and in five of the leading industrial cities at June 1 and July 1 , 1S48, and July 1, 1947.

| July I | 42.0 | 42.3 | 41.5 | 92.4 | 99.2 | 85.3 |

$\bar{x}$ The averages at those dates were affected by loss of working time at the year-end holidays in the case of Jan. 1, and by the Easter holidays in the case of
Apr. 1, 1948 and 1945, and Hay 1, 1946.

As already stated, there was an increase of 2.3 p.c. in the aggragate hours reported by leading manufacturing establishments for their hourly-rated staffs at July $l$ as compared with June 1. This increase was due to the fact that the observance of the Victoria Day holiday during the last week in May had lowered the working time reported in the preceding monthly survey. In quebec, many factories celebrated the St. Jcan Baptiste holiday durine, the last week in June, which tended to counteract the increase in the working hours indicated in most other provinces. Higher aggregate hours were reported at July 1 as compared with June 1 in both the heavy and the light manufactured goods divisions, the gain in the former being 2.8 p.c., while the latter division showed an increase of 1.8 p.c.

The hours reported in manufacturing as a whole in the week under review averaged 42, an increase of three-tenths of an hour as compared with the week of dune l. The indicated working time at July 1, 1947, had also been 42 hours, while at July 1 in 1946 and 1945 , the average number of hours worked by the wage-eamers for whom data were reported had been 42.4 and 44.3 hours, respectively. Vage-earners employed in factories in the heavy manufactured goods division worked on the average, seven-tenths of an hour longer in the week of July 1 than in that of June 1, whilo in the light manufnctured gonds division, the average working time was one tenth of an hour less. The widespread observance of St. Jean Baptiste day in the textile and other industries in the province of quebec contributed materially to the decrease. ist July 1 in 1947, 1946 and 1945, respectively, the average hours worked in the heavy manufactured goods division were $42.5,42.8$ and 45 hours, while at the same dates, the average working week reported in the non-durable goods manufacturing were as follows:- July 1, 1947, 41.6 hours, July 1, 1946, 42.1 hours, and July 1, 1945, 43.3 hours.

## AVERAGE HOURLY EARNINGS.

At 92.4 cents, the hourly earnings reported in the larger manufacturing plants at July 1 were higher than in any oarlier month. The previous maximum, at June 1, was Q1.1 conts. The preliminary data for June 1 , were revised to include tho important retroactive wage-adjustment granted the railway employees, which was mainly responsible for a revision of four-fifths of a cent in the hourly earnings as published in the preceding bulletin. At July 1, 1947, 1946 and $1 \Omega 45$, the averages were $80.8,70$ and 70.1 cents, respectively. The increase in the last twelve months amounts to 14.4 p.c., that in the two years to $32 \mathrm{p} . \mathrm{c}$., while in the 36 months' comparison there was an advance of 31.8 p.c. in the latest figure. In the heavy manufacturing industries, the earnings reported at July 1 averaged 99.2 cents, exceeding the June 1 figure by foxr-fifths of a cent, and that at July 1, 1947, by 12.4 cents. As compared with July 1 in 1946 and 1945 , there were advances of 23.5 cents and 22.2 cents, respectively. The most noteworthy increase in the month in the durable manufactured goods division was that of 11.5 cents in the wages of employees working in plants refining nonferrous ores. Increases of smaller magnitude were indicated in aluminum manufacturing and a number of other industries. In factories producing lipht manufactured foods, there was an increase of ninc-tenths of a cent over the previous maximum of 84.4 cents reported at June 1, 1948. At July 1 in 1947, 1946 and 1945, the hourly earnings were 74.7 cents, 64.1 cents and 61.2 cents, respectively. The increase at the date under review amounted to 14.2 p.c. as compared with a year earlier, to 33.1 p.c. in the two years' comparison, and to 39.4 p. . . in the comparison with July $1,1945$.

> AVERAGE WMEKIY VAGES.

The aggregate wages paid to the hourly-rated mage-earners of the larger manufacturing establishments at July 1 were higher by 3.4 p.c. than at June 1 , when there had been a 1.3 p.c. loss as compared with May 1 largely resulting from the observance of the Victoria Day holiduy. The increase was more marked in the durable manufactured goods division, where there was a 3.7 p.c. gain over the preceding month; the increase

Exclusive of electric light and power. $x$ See footnote on page 2.
in the light manufactured goods division amounted to 2.9 p.c. There were continued wage increases in certain industries in both categories of manufacturing, but with the increase in the average hours worked per employee in the heavy manufactured goods division, the upward trend in that group of industries was more pronounced.

The averace weokly wares of hourly-rated wage-eamers employed by leading manufacturing establishments stood at $\$ 38.81$ at July l, as compared with \$38.11 at the beginning of June, $\$ 33.04$ at July $1,1947, \$ 29.68$ at July l, 1946, and $\$ 31.05$ at July 1,1945 . In the heavy manufactured goods class, the average weekly wages rose by $\$ 1.03$; increased wage-rates and longer working hours were contributing factors in this increase. In the non-durable manufacturing goods division, while a slicht reduction in the average working time occurred, there was an increase of 29 cents in the weekly wages, due in part to wage adjustments in the pulp and paper and other industries.

Table 2 gives a comparison of the average weekly salaries and wages reported monthly by leading manufacturers since 1944, with the average weekly wages paid the wage-eamers for whom they keep a record of hours worked. The former figures include wage-earners paid by the hour and those paid at other rates (such as pieceworkers, etc.), as well as workers paid by salary and commissions. On the whole, the wage-earners for whom statistics are given in the present bulletin, as shown in Trable 3, form important proportions of the total personnel of the co-operating, establistments. At the bepinninf, of July, such employees made up 75.3 p.c. of the total number of persons of all categories on the payrolls of the manufacturers $1 /$ fumishing monthly statistics on employment and payrolls at the same date; in the heary manufactured goods industries, the ratio was 78.9 p.c., and that in the light manufactured poods division, 72 p.c.

The high proportions which the hourly-rated wafo-esrners constitute of the total emplowees of the co-operating establishents lend interest to the data in Table 2. In the month, the combined salaries-and-wages figure incrensed by 60 cents, as compared with a gain of 70 cents in the weekly wages of the hourly-rated personnel In the heary manufactured goods industries, the reporting plants indicated an increase of "1.00 in the month in the salaries-and-wages figure, and of \$1.03 in the weekly earnings of the hourly-rated employees. In the non-durable manufactured goods industries, the average weekly earnings of the persons on salaries and wages at July 1 increased by 25 cents, while those of the hourly-rated personnel rose by 29 cents.

The following table shows the percentape increases in the weekly salaries-andwages figure and in the wages of hourly-rated personnel at July 1, 1948, as compared with July 1 of last year, and also as compared with the same date in 1946 and 1945; Increases at July 1, 1948, as compared with:-

| Industrial Division | Salaries and Wages | Weekly <br> Waces | Salaries and Wages | Weekly <br> Wages | Snlaries and Wages | Weekly <br> Nages |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | p.c. | p.c. | p.c. | p.c. | p.c. | p.c. |
| 1 Manufacturing | 13.1 | 14.3 | 27.6 | 30.8 | 24.9 | 25.0 |
| rable Lanuractured Goods | 13.7 | 13.7 | 28.0 | 29.5 | 22.2 | 21.1 |
| n-Durable Manufactured Goods | 12.3 | 14.2 | 26.9 | 31.5 | 30.8 | 33.9 |

1/ That is, of establishments ordinarily employing 15 persons and over. See the monthly bulletins on Amployment and Payrolls. It is estimated that the salaried personnel in manufacturing as a thole usually make up $16 \mathrm{p} . \mathrm{c}$. to $17 \mathrm{p} . \mathrm{c}$. of the total number of employees. In 1946 , the wrage-earners for whom monthly statistics of man-hours and hourly earnings were available constituted $81 \mathrm{p} . \mathrm{c}$. of the total number of wape-earners reported by all manufacturing establishments to the innual lensus of hanufactures, including wage-earners paid at hourly rates, and those employed on other terms.

The advances in the weekly wages figure at July 1,1948 , over the same date in 1947 and 1946 are equal to or exceed those indicated in the more general figure of salaries and wages. In the comparison with 1945, however, the latter ficures show increases on a slightly larger scale in the heavy manufactured goods division, while in manufacturing as a whole and in the lirht manufactured goods industries, the growth in the weekly wages of hourly-rated wame-eamers in the last three years has been relatively rather greater than that shom in the snlorieswand memes fimure. During the past pew months the threenvear corparis hae boor apprazking more closely the sarse pattern noticed in the other two yoars os the recorc, as the and an the European war in Lay, 1945 r waced the overtirle worked by wafe-earners in many establishments and the reby lowered the weokly wages earned.

## 2. Non-Manufacturing Industries.

In many of the non-manufacturing industries, few of the wage-earners are paid by the hour, with the result that a precise record of the hours worked is not kept. The representation of the non-manufacturing industrios in tris bulletin is therefore less than that in the manufacturing classes. The following notes deal hriefly with the statistics for several of the non-manufacturing groups.

The number of wheweamers, their apgretrate hours and wages reported in coal mining at July 1 were higher than in the week of June 1 , when the hours worked averaged 37.8, risinf, to 38.1 at the date under review. The hourly earnings, however, declined from 126 cents to 124.0 cents in the same period. At July 1,1947 and 1946, the hourly earnings were 109.8 cents and 95.4 cents, respectively. The emplovees in the extraction of motallic ores worked, on the averago, the same number of hours as in the week ending July 1 . The hourly earnings increased from 108.4 cents to 111.4 cents in the same period, because of wage adjustments in several important mines. A year ago, the rate had been 101 cents. In the non-metallic mining group, the average hours increased from 44.3 at June 1 to 45.6 at duly 1 . This was accompanied by an increase of four-fifths of a cent in the hourly earnirgs bringing the latest rate to 34.7 cents. At July 1, 1947, the average hourly earnings were 77.3 cents. There was an increase in the agcregate hours, the number of wage-earners and the aggregate wages reported for hourly-rated wage-eamers in the local transportation group. The average hours worked increased by nine-tenths of an hour, while there was an increase of four-fifths of a cont. At July 1, 1947 and 1946, the hourly earnings had boon 84.5 cents and 71.7 cents, respectively, as compared with $9 \varepsilon$ cents at the date under review.

Seasonal activity in building construction produced an increase in the aggregate hours, the number of wage-earners and the aggregate wages of employees reportod in that industry. The average hours worked were 39,8 , an hour hipher than those reported in the previous month. The rverage hourly earnings increased by one fifth of a cent, to a new maximum of 99.8 cents. A year ago, the average stood at 90.7 cents, while two years ago, the indicated average hourly earnings were 82.8 cents. There was an increase of 1.4 hours in the average time worked by the wageoarners employed br lending employers in the highway construction industry, bringing their average working week to $38 . \epsilon$ hours. During the same period, the average hourly earnings increased from 78.9 cents to 79.1 cents. Tho aggregate of hours and wages both shoved substartial gains, due to seasonal activity in highway construction work. Last year at the same date, the hourly earnings had been 71 cents, while two years ago the rate stood at 64.7 cents.

The average hourly earnings in the larger hotels and restaurants remained the same at July 1 as for the pay period ending june l. This was accompanied by an insignificant decrease in the average number of hours worked, bringing the average working time during the last pay period in June to 42.9 hours. The average hourly earnings at the same date were 59.4 cents, an increase of 7.1 conts above those reported a vear ago. At July 1, 1946, the average hourly earnings were 44.5 cents. Laundries and dry-cleaning estabijshnents reporied a moderate increase in hourly-rated employees, together with hipher aggrogates of hours and earnings. The

- 7 -
average hours worked, however, decreased from 40.6 hours at June 1, to 40.2 at the date under review, but the hourly earnings were one-fifth of a cent higher, standing at 60.1 cents at the latest date. A year ago, the avorage carnings per hour were 54.7 cents, while two years ago, the average was 48.3 cents.

## 3. Provincial Statistics for Leading Industries.

Konthly statistics of man-hours and average hourly carnings in manufacturing as a whole in the various provinces in the last 25 months are given in Table 5. Table 6 contains provincial figures of average weekly wages of wage-anmers for whom data are available since Nov. 1, 1944. In Table 9 are shown provincial statistics of average hours and average hourly earnings at dune 1 and July 1,1948 , and July 1 , 1947, for the manufacturing industries omploying representative numbers of hourlyrated workers in the various provinces.

The average hours worked by hourly-rated wage-eamers in manufacturing as a whole in Saskatchewan and Quebec were lower in the week of July 1 than in that of June 1. In the othor provinces there was an increase in the goneral average, indicating more normal activity than during the last pay period in May, when the Victoria Day holiday had affected the situation. The widespread observance of St. Jean Baptiste day in Quebec during the last pay period in June resulted in a falling-off of one hour in the average working time reported in that province. Hourly-rated workers in leading factories in New Brunswick worked, on the average, two hours longer than in the week of June 1, while the working week in Nova Scotia and Nanitoba increased by 1.7 hours and 1.5 hours, respectively. Smaller increases took place in Ontario, Alberta and British Columbia, while in Saskatchewan there was a decrease of two-fifths of an hour. As compared with July 1, 1947, there were lecided decreases in the average hours worked in Nova Scotia and British Columbia. Anor declines were indicated in New Brunswick, Ontario and Alberta, while the workints time in Juebec in 1948 was ereater by one half an hour than for the same pay period in 1947, when the St, Jean Baptiste holiday had fallen closer to the week-end.

The following table gives the percentage increases in the average hourly oarnings and the average weekly wages of wage-earners in manufacturing for whom statistics are available in the various provinces at July 1, 1948, as compared with the same date one, two and three years earlier, together with the number of wageearners reported by leading manufacturers at the latest date:-

The averafe hourly earnings in manufacturing as a whole showed continued advances at July 1 as compared with June 1 in all provinces but Nova Scotia and ilborta. Seasonal employment of lower paid wage-eamers was a contributing factor in declines of three-fifths of a cent and one half a cent, respectively, in these two
provinces. The largest increase in the hourly rates was that of 1.9 cents in Quebec, where wage adjustments in pulp and paper and aluminum manufacturing tended to raise the general level. In the other provinces, the gains in hourly earnings ranged from one tenth of a cent in Manitoba, to nine-tenths of a cent in New Brunswick. The preliminary data for the week of June 1 were revised to include the retroactive wage increase recently granted railway employees. Compared with July l of last year there wore general increases in the average hourly earnings reported in manufacturing, as follows:- Nova Scotia, 9.8 cents; New Brunswick, 9.9 cents; Quebec, 10.5 cents; Ontario, 12.2 cents; Manitoba, 10.8 cents; Saskatchewan, 12.9 cents; Alberta, 12.2 cents, and British Columbia, 12.9 cents. The industrial distributions of the wage-aamers in the various provinces affect to an important extent the amount of the general increases in hourly earmings in manufacturing as a whole, since there have been substantial increases in the wage-rates in practically every type of indistry in all provinces during the period for which data are available.

## 4. Statistics for the Larger Citios.

Table 6 contains monthly statistics of average hours worked and average hourly earnings in manufacturing as a whole in the larger industrial cities in the last 25 months. In Table 8 are given the average weekly wages reported by leading manufacturers for the wage-earners for whom they have furnished data on man-hours and hourly earnings since Nov, 1, 1944, while Table 10 gives statistics of average hours of work and average hourly earnings in certain industries in these centres as at June 1 and July 1, 1948, and July 1, 1947。

As has previously been stated, the variations in the average rates in manufacturing as a whole in the cities are due, in part, to the differences in the industrial distributions of the wageamers for whom statistics are available; the related sex distribution of the labour force is another important factor contributing to the differences.

In all five centres for which monthly statistics are published, the averape hours worked by the hourly-rated personnel reported in manufacturing as a whole were hicher than in the week of June 1, 1948. As mentioned before, the Victoria Day holidsy had affected the situation during the last week in May. The small increase of onetenth of an hour in Montreal was contrary to the seasonal trend in that city in the period under review in the vears for which data are available. Overtime reported in steel shipbuilding and certain other industries counteracted the effect of the St. Jean Baptiste holiday, generally observed in the province of Quebec during the last week of June.

There were increases in hourly eamings in Montreal and Hamilton, while in Toronto and Vancouver seasonal activity in food-processing and other industries brought about small decreases in the hourly eamings in manufacturing as a whole at July 1 as compared with June 1: Overtime work on Victoria Day had also tended to raise the level of earnings at the latter date in certain centres. this is the first occasion in many months, when a decrease in hourly earnings in manufacturing, as a whole, occurred in any of the cities for which data are published. Hourly-rated wape.. earners in winnipeg were paid the same general rate per hour as in the weok of Junc 1. 1948. As previously mentioned, the preliminary data for the cities at June 1 were revised to allow for the retroactive payment of the wage increase granted railway employees at mid-summer. The revision was particularly markad in Winnipog, raising the general average of hourly eamings in manufacturing by approximately five cents. The weekly wages in all five centres were higher at July 1 than in the same pay period a month earlier. During the past year, the hourly earnings have increased as follows: Nontreal, 10.7 cents; Toronto, 11.9 cents; Hamilton, 16.7 cents; Winnipeg, 10. 7 cents, and Vancouver, 12.6 cents. The percentage increases in the average hourly earnings reported in manufacturing as a whole in the leading industrial cities at July 1, 1948 , as compared with the same date one, two and three years earlier, are given in the table on the following page.

In Canada as a whole, the general advance in manufacturing as compared with a year earlier was $14.4 \mathrm{p} . \mathrm{c}$. in the case of the avarage hourly rate, and 14.3 p.c. in the case of the average weekly waces, while in the 24 months' comparison, the Dominion average of hourly earnings advanced by $32 \mathrm{p} . \mathrm{c}$. and that of weekly wages, by $30.3 \mathrm{p} . \mathrm{c}$. The percentage of increase in the various provinces are given in a preceding paragraph.

Fabio 3.- Average Bours and Average Hourly and Fooklj Sarninge of Wage-Barners for Whom Data are avaliable at July 1, 1948 , With Comparative Pigures for June 1, 1948 and July 1, 1947.
(The intest figuras are subjeot to revision).
