Average Weekly Wages of Hourly-Rated Wage-Earners in Manufacturing, by months
8. In Canada, with comparative figures of earnings for salaried employees and wage-earners, Oct. 1, 1945 - Oct. 1, 1949 ..... 17
9. By Frovinces, Oct. 1, 1945 - Oct. 1, 1949 ..... 18
10. By Cities, Oct. 1, 1945 - Oct. 1, 1949 ..... 19
hage-Earners.- Leading emplovers are asked to furnish monthly statistics on man-hours on behalf of those wage-earners for whom they keep a record of aggregate hours worked, so that the data relate, in the main, to persons employed at hourly rates. Information for salaried emplovees is purposely excluded, while in many cases, statistics of man-hours are not available for certain classes of wage-earners, whose earnings, like those of most salaried employees, are not directly dependent upon the number of hours worked; examples of wagemearners frequently excluded are route drivers, piece-workers in many but not all establishnents, truck men, etc. In addition, some employers do not keep a record of man-hours for any classes of employees. Accordingly, the number of workers for whom statistics are given in the present bulletin is smailer than the total number of employees, (salaried personnel and wage-eamers) for whom statistics of employment and payrolls are obtained in the monthly surveys on these subjects; the results of these surveys are published in the monthly bulletins on employment and payrolis, which also contain data relating to the sex distribution of the workers in recorded employment, an important factor contributing to differences shown in the average earnings in various industries.

The monthly statistics of average hours and average hourly earnings, like those of employment and average weokly earnings relate, in the main, to establishments usually employing 15 persons and over, the smaller firms being excluded for reasons of economy in terms of cost and time. In the case of the manufacturing industries, (largely represented in the material of the present bulletin), the statistics relate to over 75 p.c. of all the monthly surveys of employment and payrolls. The factories fumishing monthly data on man-hours and hourly earnings in 1946 empluyed over 81 p.c. of the total wage-earners reported by all manufacturing establishments in the same year, including wage-earners paid by the hour and those employod on other terms.

In mining, and construction, data on hours and earnings are currently available for some 85 p.c. and 83 p.c., of the total employees reported to the monthly surveys of employment and payroils in those industries, respectively; at June 1. 1941, the co-operating mine operators had employed over $96 \mathrm{p} \cdot \mathrm{c}$. of all wage-earners at work as enumerated in the Census, while the employers in construction whose statistics were then received had reported over 79 p.c. of the Census total of employees at work in that group. It should be noted that the comparisons with the Census figures are complicated by differences in the classifications used in compling the two series, so that the percentages of coverage are only approximate.

Man-Hours.- The statistics of man-hours include overtime as well as the hours worked by part-time and casual workers. Hours credited to persons absent on leave with pay in the recorded pay period are included in the statistics as though the hours for which payment was made had been worked.

Wages. - The wages reported represent gross earnings before deductions are made for taxes, unemployment insurance, etc.; they do not, however, include the value of board and lodging which in some cases is part of the remuneration of workers. Incentive and production bonuses and overtime payments are included, as are sums paid employees absent on leave with pay during the pay period for which statistics are given. The figures of average weekly wages result from the multiplication of the average hours worked during the nariod of observation, by the average hourly earnings reported in the same period.

Pay Periods.- Statistics of man-hours and hourly wages reported for periods exceeding one week in duration are reduced by the appropriate proportions to obtain for tabulation purposes the number of hours worked and the hourly earnings in one week in the indicated pay period; such information is then added to the data fumishod by employers who pay on a weekly basis, so that, in all cases, the tabulated data represent the situation in one week in each month.

# STATISTICS OF MAN $\sim$ HOURS，HOURLY GARNINGS AND WEEKLY WAGES AS REPORTED BY LRADING EMPLOYERS AT OCT．1， 1949. 

## SUMMARY．

There was an increase of 0.8 p．c．in the aggregate hours reported by leading manu－ facturing establishments in the weok of Oct． 1 in comparison with a month earlier． This partly resulted from the resumption of more normal activities following the holiday season in some industries，and partly from a seasonal increase in overtime hours in others．The average working time rose by 0.3 hours，and there wes a decrease of 0.1 p．c．in the hourlymrated wage－aarners employed by the co－operating factories． The number of wage－earners on the staffs of the larger mine operators declined by 0.7 p．c．e but the aggregate hours worked in their establishments increased by l．3 p．e．， and there was an increase of 0.8 hours in the average working time．The total hours reported for wage－earners employed by electric railways and other local transportation companies were higher by $l_{0} 1$ poco than in the week of Sept． 1 ，but with an increase in the number of wagearners on the staffs，there was a decline of 0.5 hours in the average working week．In building construction，the aggregate hours reported by the co－operating firms rose by 0.9 poco；the number of wage－oarners they employed showed a very slight decline from the preceding month，while the average time worked per wage oarner was longer by 0.4 hours．In the service industries for which data are avallable，the aggregate hours reported declined by 3.8 poco，and the number of wage－ earners by 2.7 poco，largely the result of the closing of sumner hotels．

In manufacturing，the total wages reporied for the week preceding Oct． 1 increased by 1.7 poc．as compared with the same period one month earlier；the average hourly earnings in this comparison increased by 0.9 cents，to reach 99.3 cents，the maximum figure on record．Wage increases were granted by firms in some establishments： variations in the industrial distribution associated with seasonal changes in the levels of employment in certain industries also contributed to the change．The average hourly earnings computed from data furnished by leading mine operators increased by one cent，while the total wages reported were 2.2 poc．above the Sept． 1 figure。 In local transportation，the aggregate wages paid by the larger companies in the week under review increased by $l_{0} 4$ pocog the average hourly earnings advanced by one ofifth of a cent，bringing the latest figure to 101.5 cents．The aggregate wages paid by the comoperating building contractors increased by $l_{0} 3 p_{\circ} c_{\circ}$, while the average hourly earnings of tivelr employees rose by 0.4 cents，to 108.2 cents per hour．In the service industries for which data are tabulated，there was a decline of l．4 poc．in the total oarnings reported．As this decline was accompanied by a relatively larger drop in the total hours worked，the average hourly earnings increased by 106 cents per hour between Sept． 1 and Oct．1。

## 1．Manufacturing．

Average Hours Worked．－As has been the case in each of the years for which information is available，there was a rise in the average hours worked by manufacturing firms between the weeks of Sept． 1 and Oct．1，1949．The increase at the latter date was 0.3 hours，bringing the latest figure to its highest point since Apr。1，1949； the situation in the intervening months was affected by holidays，hot weather and other factors．The average of 42.7 hours at Oct． 1,1949 ，however，was 0.3 hours lower than that reported in manufacturing at 0ct．1，1948．

Almost 49 poc．of the wageosarners in manufacturing for whom data were tabulated at Oct．I were employed by firms in the durable goods division．While the number of wage oarners reported in this division declined by 0.5 poc．，their aggregate of hours rose by 0.6 poco，resulting in an increase of a half hour in the average working weok

as compared with the week of Sept. 1. The average was 43 hours at Oct. 1, 1949, threo-tenths of an hour shorter than the average a year earlier. An advance in working time was reported in all major branches of this division, with the exception of lumber products. The most important increases took place in plants manufacturing iron and steel products, electrical apparatus and clay, glass and stone products.

The aggregate hours worked by wage-earners in the co-operating factories in the light manufactured goods division at Oct. I were one pos. higher than at Sept. 1 , while, on the average, the working week was 0.3 hours longer. Heightened activity was reported in all industries except edible animal and plant products, rubber and beverages. During the week of Oct. 1, 1949, the average hours worked in the nondurable manufactured goods industries as a whole were 42.5 hours per week as compared with 42.7 at Oct. 1, 1948.

Hourly Earnings - The average hourly earnings reported by the larger manufacturing establishments at Oct. 1 reached a new maximum of 99.3 cents. The increase of 0.9 cents over the Sept, 1 figure can be largely accounted for by increased wage-rates in some industries, variations in industrial distribution and more work performed at premium overtime rates. At oct. 1, 1948, the hourly earnings in manufacturing as a whole stood at 94.5 cents.

In the heavy manufactured goods industries, the aggregate paid by reporting firms to their wagenearners at Oct. l was l.7 p.c. greater than at Sept. l, while the total of hours worked was 0.5 p.c. greater. The average hourly earnings increased by 1.2 cents during the same period, to reach a new high level of earnings at 107.8 cents. Higher wape rates granted employees in the smelting and refining of non-forrous metallic ores, in the manufacture of railway rolling stock and other industries, topether with increased overtime in aircraft and automobile factories, were responsible for this increase.

The aggregate earnings in the light manufactured goods division at $0_{c t}$. I incroased by 1.7 p.c. as compared with the week of Sept. l. The average hourly earnings, at 91.1 cents at Oct. 1 , were 0.7 cents higher than the Sept. 1 figure, but were 0.4 cents below the maximum recorded at June 1, 1949. Upward refisions of wage rates were noted in meat packing, printing and publishing and other industries. These, together with the return to more normal working conditions after the vacation months and reductions in the working time of seasonal workers in food processing plants, were mainle responsible for the higher average hourly earnings at the date under review. At Oct. 1, 1948, the wage-earners in the non-durable manufactured goods division received, on the average, 86.6 cents an hour.

Average Weokly Wages. - The average weekly wapes of hourly-rated wage-earners emploved by leading manufacturing, establishments stood at $\$ 42.40$ at Oct. 1 , as compared with $\$ 41.72$ at the beginning of September. The latest figure is the highest in the record of almost five vears. In the heavy manufactured goods class, the figure at Uct. 1 was $\$ 46.35$, as compared with $\$ 45.31$ a month earlier. In the non-durable goods division, the average weekly wages rose from $\$ 38.15$ at Sept. 1 , to $\$ 38.72$ during the period under review. The higher figures resulted from upward adjustments in the wage rates in several industries, together with a seasonal increase in hours worked following the summer vacation period.

Table 8 gives a comparison of the average weekly salaries and wages reported monthly by leading manufacturers since October 1, 1945, together with the average weekly wages pald the wage-earners for whom they keep a record of hours worked. The former figures include wage-earners paid by the hour and those paid at other rates, as well as workers paid by salary and commissions. On the whole, however, the wageearners for whom statistics are given in the present bulletin, as shown in Table 3, form important proportions of the total personnel of the cowoperating establishments.

At the beginning of October, such emplovees made up 74.6 p.a. of the total number of persons of all categories on the payrolls of the manufacturers $/$ furnishing monthly statistics on employment and payrolla at the same date; in the heavy manufactured goods industries, the ratio was $77.7 \mathrm{p} . \mathrm{co}_{0}$, and that in the light manufactured goods division, 71.9 p.c.

The high proportions which the hourlyorated wage-earners constitute of the total emplovees of the co-operating establishments lend interest to the data in Table 8. In the period under review, the average weekly salariesoand-wages figure for manufacturing as a whole increased by 65 cents, while the average weokly wages in the same comparison were 68 conts higher. In the durable goods division, the figure of weokly wages increased by $\$ 1.04$ between Sept. 1 and Oct. 1, while the combined salaries and wages showed an advance of 83 cents. In the nonadurable goods division of manufacturing, the gain of 57 cents in the average weokly wages was only slightly greater than the increase of 50 cents in the figure of average weokly salaries and wages.

## 2. Non-Manufacturing Industries.

In many of the non-manufacturing industries, few if any of the wage-earners are paid by the hour, with the result that a precise record of the hours worked is not kept. The representation of the non-manufacturing industries in this bulletin is therofore less than that in the manufacturing classes. The following notes deal briefly with the statistics for several of the non-manufacturing classes.

In the week of Oct. 1, the average hours worked and the average hourly earnings in coal mining were above those reported at the beginning of September. The average working time reported in this industry throughout Canada was one hour longer at Oct. 1 than at Sept. 1; the average hourly earnings increased by 0.8 conts in the same period. Wage-earners engaged in the extraction of metallic ores worked, on the average, 45.8 hours during the week of Oct. 1, compared with an average of 45.1 hours a week, a month earlier. The average hourly earnings reported in the industry increased by 0.5 cents in the same period, to reach 116.4 cents, the highest figure an record. Some upward adjustments in the wage rates were made during the period. In the non-metallic mining group, there was an increase of 1.3 hours in the average working time, and an advance of 1.5 cents in the average hourly earnings. The higher figure of hourly earnings at the date under review largely resulted from overtime hours worked by some mining companies, together with a seasonal decline in the number af casual wage-earners employed in the peat bogs of Alberta and British Columbia.

In the local transportation group, the average hours worked in the week of Oct. 1 were a half hour shorter than a month earlier, when the figure had been affected by seasonal activity in grain elevators, and additional street railway services to cope with exhibition traffic in some centres. The average hourly earnings increased by one-fifth of a cent in the month to reach 101.5 cents an hour at Oct. 1 , when the figure was one-tenth of a cent below the maximum recorded at Aug. 1, 1949。 There was a slight increase in both the number of wage-earners emploved by building contractors and in their average hours, during the pay period under review, the hourly earnings at Oct. 1 were 108.2 cents, 0.4 cents higher than the Sept. 1 figure. The latest figure is the highest since May 1, 1949; in the intervening months seasonal increases in unskilled labour have offset the offect of upward adjustments in the wage rates in some establishments. Highway construction showed a seasonal decline in the number of wage-earners, the latest figure being 3.2 p.c. below the number reported at Sept. 1. The average working week was a half hour shorter during tbe reek under review, while the average hourly earnings dropped from 85.1 cents at Sept. 1 , to 85.0 cents at oct. 1. With the end of the summer vacation period, a decline of 1/That is, of establishments ordinarily employing 15 persons and over. See the monthly bulletins on Employment and Payrolls. It is estimated that the salaried personnel in manufacturing as a whole usually make up 16 poce to 17 poc. of the total number of emplovees. Attention is called to the explanatory notes facing the first page of this bulletin.
3.7 p．c．was reported in the number of wage－eamers emploved in the co－operating hotels and restaurants between Sept． 1 and Oct．1．The average time worked declined by 0.9 hours per week，but the average hourly earnings were 1.8 cents higher at Oct． 1 than a month earlier．The average hours worked by wage－earners in laundries and dry－cleaning establishments were 0.5 hours higher at Oct． 1 than during the week of Sept．1．The average hourly earnirgs rose by 0.7 cents in the same period，to reach 66.9 cents，the highest figure on record for this industry．

3．Provincial Statistics for Leading Industries．
In the week of Oct．1，the average hours worked by wage－earners for whom man－ hours are reported by leading manufacturing plants were longer than at Sept。 1 in Nova Scotia，New Brunswick，Quebec and Ontario，shorter in Manitoba，Alberta and British Columbia，and unchanged in Saskatchewan．In Nova Scotia，the average hours were three－fifths of an hour longer in the period under review，largely a result of a higher avarage in fron and steel mills．Longer working time in fish－processing plants and pulp and paper mills contributed to the increase of four－fifths of an hour in manufacturing generally in New Brunswick．Increased activity in the textile mills and some other major industrial groups was largely responsible for a rise of three－ fifths of an hour in the average time workad by wage－earners in manufacturing in Quebec． The working week in leading manufacturing establishments in Ontario was two－fifths of an hour longer at Oct． 1 than at Sept． 1 ，mainly due to the resumption of more normal conditions following the summer holiday period．The average working time was one－ tenth of an hour shorter in Manitoba and British Colunbia．A reduction in the average hours worked in food－oprocessing plants，together with increased employment of casual workers in other industries，brought about a decline of 0.7 hours per week in the larger plants in Alberta．In Saskatchewan and Alberta，the average hours worked in manufacturing during the week of Oct．I were longer than in the same period a yaar earlier，but in all other provinces，decreases were indicated，varying from 0.8 hours in British Columbia to 0．1 hours in Noya Scotia and Ontario．

There were increases in the average hourly earnings at Oct． 1 as compared with Sopt． 1 in all provinces．The largest gain was reported in Alberta，where the average hourlv earnings advanced from 99.1 cents a month earlier to 100.8 cents－the maximum on record－at the date under review．This increase was partly the result of wage adjustments in meat－packing plants，and partly the result of seasonal changes in employment in vegetable food processing plants．The average hourly earnirgs in Ontario， Manitoba and Saskatchewan also reached new all－time high levels at Oct．1．Wage increases in the food－processing industries and overtime work contributed materially to an advance of 1.3 cents per hour in the latest Saskatchewan figure as compared with Sept．1．In Ontario，an increase of l．l cents per hour was reported；wage rates were raised in some of the major industrial groups，including animal products，iron and ste日l and non－ferrous metals，while fewer hours were reported by firms engaged in seasonal work in certain industries in which earnings tend to be less－than－average． Wage increases in some industries and changes in the industrial distribution largely accounted for increases of 0.6 cents， 0.5 cents and 0.2 cents in the average hourly earnings reported in manufacturing in Quebec，New Brunswick and Nova Scotia， respectively。

During the past year，the hourly earnings in manufacturing in the provinces have risen as follows：Nova Scotia，six cents；New Brunswick， 2.2 cents；Quebec， 4.2 cents；Ontario， 4.8 cents；Manitoba， 3.2 cents；Saskatchewan， 4.9 cents； Alberta， 5.5 cents and British Columbia，6．7 cents．In this period，the general average for Canada has risen by 4.7 cents．In considering the changes shown in the table on page 2，it must be remembered that the industrial and the related sex distribution of the wage－earners reported by leading firms in the various areas have an important influence on the differences in the amounts by which the provincial and city figures of hourly ormings in manufacturing as a whole have risen．

Table 5 contains statistics of average hours worked and average hourly earnings in manufacturing in the last 25 months for Montreal, Toronto, Hamilton, Winnipeg and Vancouver. The average hours warked were longer for the week of Oct. 1 than for that of Sept. I in all these centres with the exception of Winnipeg. The decline of one-fifth of an hour in that city was largely the result of the shorter working time reported by firms manufacturing edible plant products in which large numbers of casual workers were emploved during the week under review. Among the cities for which an increase in working time was reported, the greatest change was noted in Montreal, where the average working week was three-fifths of an hour longer in the week preceding Oct. 1 than in het of Sept. 1. Manufacturing establishments in Toronto and Hamilton reported that, on the average, their wage-earners worked a half hour longer in the period under consideration, and in Vancouver, the working week rose by one-fifth of an hour. Increases in the average hours of work are usual at this time of vear, following the dislocation occasioned by the holiday season. As compared with 12 months earlier, the average hours worked in manufacturing during the week preceding Oct. 1, 1949, were slightly shorter 13 all cities except Toronto, where no general change was reported.

Firms in all five cities reported higher average hourly earnings in manufacturing than in the week of Sept. 1, 1949. The greatest increase of 1.5 cents an hour, reported in Vancouver, was largely a result of wage adjustments in the edible animal products and printing and paiishing industries, together with more overtime in some establishments. Factory wage-earners in Montreal and Hamilton, on the average, received 0.8 cents more per hour at Oct. 1, 1949, than at Sept. 1. The increase in Montreal was due to the payment of higher wage rates in meat packing, iron and steel and certain other establishments; longer hours and overtime par in many industries, and a change in the industrial distribution of the reported hours, als. contribetad to the rise of 0.8 cents in the month. In Hamilton, the increase was due to the fact that a higher proportion of the total hours was reported in the classes in which the wage rates are above-average. As a result of wage increases in meat pecking, printing and publishing and some other establishments, the general average of hourly earnings in manufacturing in Winnipeg was 0.7 cents higher at Oct. 1,1949 , than a month earlier. A similar increase was reported in Toronto, where wage rates moved upward in meat packing and some other industries.

The advances in the average hourly rates in the larger cities at oct. 1 compared with the same date in earlier years, as shown in Table A and Table 5 , were considerable, although the rates of increase are not so large as those indicated in similar comparisons in preceding reports. It should again be pointed out that the variations in the average ratos in manufacturing as a whole in the cities are due, in part, to differences in the industrial distributions of the wage-earners for whom statistics are available. The related sex distributions of the wage-earners reported by leading establishments in the various provinces and cities also have an important influence on the differences in the amounts by which the hourly earnings in manufacturing as a whole have risen.
(The latect figures are subject to revision).
