## MAN-HOURS AND HOURLY EARNINGS

## REPORTED AT

THE FIRST OF MAY, 1949

# DOMINION BUREAU OF STATISTICS DEPARTMENT OF TRADE AND COMMERCE 

# MAN-HOURS AND HOURLY EARNINGS 

## STATISTICS OF AVERAGE HOURS OF WORK, AVERAGE HOURLY EARNINGS AND AVERAGE WEEKLY WAGES REPORTED AT THE FIRST OF MAY, 1949.

Published by Authority of the Rt. Hon. C. D. Howe Minister of Trade and Commerce

Prepared in the Labour and Prices Division,<br>Employment Section<br>Dominion Bureau of Statistics, Ottawa

STATISTICS OF MAN－HOURS，HOURLY EARNINGS AND WFHKLY WAGES AS RFPORTED1／AT MAY 1，1949，WITH COMPARISONS AS AT APRIL 1， 1949 AND MAY 1， 1948.

## SUMMARY．

In manufacturing，there was a decreass of $l_{0} ? p_{0} c_{0}$ in the aggregate hours reported by leading establishments in the week of May 1 ．The decline as compared with the we日k of Apr． 1 partly resulted from lowered overtime in some industries，together with short time in others．The average working，time fell by 0．$\frac{1}{}$ hours．Mine operators indicated a reduction of 2.2 poc．in the aggregate hours worked by their wagemearners，whose average hours were also lower．The total hours reported for wage－ earners emploved by electric railways and other local transportation companies were higher by 2.4 p ． s ，hours than in the week of Apro $l_{0}$ but the average working week was unchanged．In building construction，the aggregate hour＇s reported by the comoperating firms rose by 4.7 p．c．；the number of wage－earners they employed was 5.2 p．c．higher than a month earlier，while the average hours per wage－earner decreased by one－fifth of an hour．In the service industries for which data are available，the aggregate hours reported increased by $l_{0} 1 p_{0} c$ ．and the number of wagemearners，by $l_{0} 7$ po． The average working week，however，was three－tenths of an hour shorter．

In manufacturing，the $r$ e ported wages decreased by 0.3 p．co during the pay period under review，in which the average hourly earnings rose by two fifths of a cent，to a new allatime high．In mining，the aggregate wages dropped by 2.3 p． 30 ； the average hourly earnings also showed a declines of one－fifth of a cent，bringing the latest figure to 117.3 cents．In local transportation，the aggregate wages paid in the week under review increased by 2.7 p 0 。on and the average hourly earnings advanced by three－tenths of a cent．In the included service industries，the wages disbursed by the co－operating firms rose by $2.4 \mathrm{p} \cdot \mathrm{c}$ 。 The average hourly earmings also increased，from 63 cents at Apr． 1 to a new maximum of 63.9 cents at May I。 In building construction，the reported total of wages was 4.4 poc，higher，but the average hourly earnings decreased by threectenths of a cent，to 108.5 cents at May I．

## TABLES．

The following tables on average hours and average samings of wage－earners for whom leading emplovers report statistics of hours worked appear in this report：

1 －Industrial Distribution of Wage－earme
Available at latest date，showing the
with comparative averages a month and
Average Hours and Average Hourly Earnings
2 －In Manufacturing in Canada．May $1_{8} 1945$－May $I_{0} 1949$
3 －In Specified Non－Manufacturing Industries May $1_{\text {n }} 1947$－May $1_{8} 1949$
4 －In Manufacturing as a Thole，in Eight Provinces，May I。 1947 －May 1． 194911
5 －In Manufacturing as a Whole，in Leading Cities．May $I_{0} 1947$ May 1,194912
6 －By Industries．Within Provinces，May 1 and Apro 181949 and May $1.1948 \quad 13$
7 －By Industries．Within Cities．May 1 and Apro 1.1949 and May I $1948 \quad 16$
Average Weekly Wages of Hourly Rated Wage Earners in Manufacturinge by months

## － 3 － <br> Io－Manufacturing．

Hours Worked．－There was a decrease of 0.4 hours in the average number of hours worked in manufacturing as a whole during the week of May 1 as compared with the same pay period at the beginning of April．The working woek was shorter in the lumber products，leather products，pulp and paper products，rubber，textile products，clay， glass and stone，iron and steel and non ferrous metal products divisions．In edible plant product and beverage factories，however，there were increases as compared with a month ago．

In plants manufacturing durable goods．the total hours roported in the period under review fell by $l_{0}$ a poco as compared with the week of apro $l_{0}$ while the number of wage－eamers declined by 0.7 poc．in the same comparison．The average number of hours worked was 42．7，half an hour less than a month earlier．The indicated hours decreased by 0.5 p．c．in the light manufactured goods division at May 1 as compared with the week of Apr．l，while the working week，on the average，was three－tenths of an hour shorter．The number of wagemearners for whom man－hours were reported rose by 0.2 poc．during the period under review．

Hourly Earnings．${ }^{-1}$ The average hourly earnings of wage earners emploved by the larger manufacturing establishments at Apro 1 reached a new maximum of 98.6 cents，a gain of two－fifths of a cent over the figure for the woek of Apr。1。 Wage－eamers in the durable goods group earned，on the average， 106.3 cents per hour，as compared with 105.7 cents a month earlier．The increases，which were most marked in the lumber and iron and steel industries，were due partly to upward adjustment of the wage rates in some establishments，and partly to lay－offs among lower－paid employees． In the lumber division，the release of employees by sawnills in the Maritime Provinces was an important factor．The aggregate wages reported in the heavy manufactured goods industries decreased by 1.3 poco during the period under review as compared with the week of Apr． 1.

In the light manufactured goods division，the hourly earnings rose by twonfifths of a cent，to a new maximum of 90.7 cents．Seasonal decreases in employment in the tobacco industry，and further increases in wagerates in some industries，were partly responsible for this latest advance．During the pay period under review，the aggregate wages reported in the non－durable goods division decreased by a negligible percentage．

Weekly Wages．－The average meekly wages of hourly－rated wage wearners employad by leading manufacturing establishments stood at $\$ 41.91$ at May I，as compared with事42．13 at the begiming of April．In the heavy manufactured goods class，the average peekly wages were $\$ 45.39$ ，as compared with $\$ 45.66$ during the week of Apro $I_{0}$ In the pon－durable goods division，the average weokly wages fell from $\$ 38.47$ at that date， to $\$ 38.37$ at the date under review．

Table 8 gives a comparison of the average weekly salaries and wages reported monthly by leading manufacturers since May 1 ， 1945 ，with the average weekly wages paid the wage－earners for whom they keep a record of hours worked．The former figures include wagemerners paid by the hour and those paid at other rates，（such as piece workers，etco），as well as workers paid by salary and comnission．On the whole， however，the wage－earners for whom statistics are given in the present bulletin，as shown in Table 1，form important proportions of the total personnel of the com operating establishments．At the beginning of May，such employees made up $74.8 \mathrm{p} \cdot \mathrm{co}$ ． $1 /$
of the total number of persons of all categories on the payrolls of the manufacturers furnishing monthly statistics on employment and payrolls at the same date；in the heavy manufactured goods industries，the ratio was 77.8 p．c．，and that in the light manufactured goods division， 72 p．c．
1／That is，of establishments ordinarily employing 15 persons and over．See the monthly bulletins on Employment and Payrolls．It is estimated that the salaried personnel in manufacturing as a whole usually make up $16 \mathrm{p}, \mathrm{co}_{0}$ to $17 \mathrm{p}, \mathrm{c}_{\text {o }}$ of the total number of employees．

The high proportions which the hourlymated wage eearners constitute of the total amployees of the co－operating establishments lend interest to the data in Table 8 。 In the month，the combined salaries－and－wages figure decreased by 10 cents，as compared with a decline of 22 cents in the weekly wages of the hourlymrated personnel． In the heavy manufactured goods industries，the reporting plants indicated a drop of 17 cents at the beginning of May in the salarieswand－wages figure，while the weekly earnings of hourlywated wage－earners fell by 27 cents as compared with Apr。1。In the nonedurable manufactured goods industries，the average weekly earnings of the persons on salaries and wages at May l decreased by 1 cent，while those of the hourlyo rated personnel were 10 cents lower．

The following table shows the percentage increases in the weokly salaries mand wages figure and in the wages of hourlyoreted personnel at May 1，1949，as compared with May 1 of last year，and also as compered with the same date in 1947 and 1946：

Increases at May $1_{2}$ 1949，as compared with：－

|  | May 1， 1948 in |  | May 18 1947 in |  | Vay 1 d 1946 in |  |

| Non murable Manufactured Goods | 8，9 | 9 。1 | 23.2 | 25.0 | 38.8 | 43.7 |

## 2．Non－lianufacturing Industries．

In many of the nonomanufacturing industries，few if any of the wage－earners are paid by the hour，with the result that a precise record of the hours worked is not kept．The representation of the nonmanufacturing industries in this bulletin is therefore less than that in the manufacturing classes．The following notes deal briefly with the statistics for several of the non－manufacturing classeso

In the week of May $I_{p}$ the average hours worked and the average weekly wages reported in the coal mining industry were lower than in the week of Apr． 1 ，the average hours falling by two，and the weekly wages by $\$ 2.82$ ．Shortages of orders were reported in both Nova Scotia and Alberta：this factor wes mainly responsible for a decrease of 10.5 poco in the aggregate hours worked in the comoperating mines，and of 11.2 poc．in their aggregate weokly wages．Wage－earners engaged in the extraction of the metallic ores worked，on the average， 44.7 hours in the week of May $l_{0}$ a decline of four－ fifths of an hour compared with the weak of Apr．I。 During this period，the hourly earnings rose by lol cents，bringing the latest figure to 116.2 cents．In the miscellaneous nonometallic mineral mining group，the average working weok rose from 42.6 hours to 42.9 hours at the date under review，but the hourly earnings dropped to 104.6 at $[2 y]$ ．from the previous maximum of 105.8 cents at the first of April．The number of wage－earners reported increased by 13,8 poco，partly due to the resumption of more normal operations in some asbestos mines in Quebec，in which the situation had been affected by industrial disputes．Seasonal activity in quarries and gravel pits also contributed to the higher figures．

Little general change was reported in the local transportation group at May 1 as compared with a month earlier．The average hours worked showed no change，while the average hourly earnings rose by three－tenths of a cent．

In building construction，the number of wage－earners employed，the aggregate wages paid by the reporting firms，and their aggregate hours increased in the weok of

May l as compared with a month earlier, the geins boing associated with improved weather conditions. The average number of hours worked in this industry, however, decreased from 40.5 hours at Apr. 1 to 40.3 hours at May I. In the same period, the average hourly earnings fell by three-tenths of a cent, from the maximum of 108.9 cents reported at Apr. 1. The number of wageverners for whom man-hours are reported in the highway construction industry at May 1 as compared with the week of Apr。I rose by 29.9 p.c., as spring construction activities cormenced. During the same period, the aggregate hours reported, and the aggregate wages paid increased by $18 \mathrm{p}, \mathrm{c}_{0}$ and $15.5 \mathrm{p}, \mathrm{c}_{0}$, respectively. The wage-earners in hotels and restaurants for whon man-hours were reported worked, on the average, two-fifths of an hour less than during the weok of Apr, 1. Their hourly earninos, however, rose from 62.3 cents at that date, to 63.1 cents at May 1. The hours worked by wage-earners in the cooperating laudries and dry-cleaning establishments decreased negligibly during the period under reviow, but their average hourly earnings rose by nine-tenths of a cent. to 65.4 conts at May 1.
3. Provincial Statistics for Leading Industries.

The changes in the working hours in manufacturing as a whole in the various provinces in the week of May las compared with the weok of Apr. I were moderate; small increases were indicated in Nova Scotia and Saskatchewan, while decilnes took place in the remaining provinces. The most marked variations were those in Manitoba and Alberta, where reductions in the time worked in the iron and steel, pulp and paper, textile, non-ferrous metal and other industries contributed to the lower averages reported at May 1. Firms in all provinces except Saskatchewan indicated shorter working hours in the weok of May $l_{\text {, }} 1949$, than in the corresponding week in 1948. In Saskatchewan, there was an increase of 0.4 hours in this comparison, due in the main to longer hours reported in food manufacturing and petroloum refining.

Table 6 shows increases at May 1 as compared with Apro 1 in the general averages of hourly earnings in manufacturing in all provinces. The most marked rise recorded was in Saskatchewan, where higher wage rates in soft drink and lumber plants. and a larger volume of employment in the animal foods industry, (in which earnings are generally above-average), contributed to the increase in the latest figure. In most provinces, changes in the distribution of the reported employees was a factor in the slightly higher averages. The higher average hourly earnings indicated in all provinces at May 1, 1949, than at the same date in any earlier year of the record resulted in the main from the payment of higher wage rates. In considering the changes shown over past years in the table on page 2, it must again be pointed out that the industrial and the related sex distribution of the wage-earners reported by leading firms in the various provinces have an important influence on the differences in the amounts by which the hourly earnings in manufacturing as a whole have risen.
4. Statistics for the Larger Cities.

There was little general change in the average hours indicated by manufacturers in Montreal and Vancouver in the woek of May las compared with that of Apr. $l_{8}$ in Toronto, the averages coincided. In Winnipeg, however, the latest figure showed a decline of 1.1 hours, due to shorter working hours in a number of industries.

The reported hourly earnings in manufacturing as a whole averaged higher in all five centres than at Apr. 1. The most important increase, that of 2.1 cents in Hamilton, resulted mainly from changes in the distribution of employment, together with longer hours in industries in which the eamings are generally above-average. The advances in the average hourly rates in the larger cities at Uay 1 as compared with the same date in earlier years, as shown in Table 5 , were considerable. As
was mentioned in connection whth the provincial averages, it is important to note that the variations in the average rates in manufacturing as a whole in the cities are due, in part, to the differences in the industrial distributions of the wage-earners for whom statistics are available; the related sex distribution of the labour force is another important factor contributing to the differences.

## TABLES.

The tables in the following pages give statistics of average hours and average earnings by industries in Canada, the provinces and the leading industrial cities. Attention is also drawn to the explanatory notes regerding coverage of employees and methods of compilation, which appear on the last page of this report.
 With Comparative Figuren for Apr. 1, 1948 and May 1, 1248.
