## EXPLANATION OF THE TERMS USED IN THIS REPORT.

Tage- Tamers.- Bmplovers aro asked to furnish monthly statistica on marhours on behalf of those wage-ermers for whom they keep a record of ageregate hours worked, $s 0$ that the data relate, in the main, to persons amployed at hourly rates. Information for salaried emplovees is purposely excluded, while in many cases, statistics of man-hours are not available for certain classes of wage-earners, whose earnings, like those of most salaried emplovees, are not directly dependent upon the number of hours worked; examples of wagemeamers frequently excluded are route drivers, piece-workers in many but not all establishments, truck men, etc. In addition, some emplovers do not keep a record of man-hours for any classes of employees. Accordingly, the number of workers for whom statistics are given in the present bulletin is smaller than the total number of employees. (salaried personnel and vage-earners) for whom statistics of employment and payrolls are obtained in the monthly surveys on these subjects; the results of these surveys are published in the monthly bulletins on employment and payrolls, which also contain data relating to the sex distribution of the workers in recorded employment, an important factor contributing to differences shown in the average earnings in various industries.

The monthly statistics of average hours and average hourly earnings, like those of employment and average weokly eamings relate, in the main, to establishments usually employing 15 persons and over, the smaller firms being excluded for reasons of economy in terms of cost and time. In the case of the manufacturing industries, (largely represented in the material of the present bullotin), the statistics relate to over 75 poco of all salaried employeas and wagemamers reported by the establishments co-operating in the monthly surveys of employment and peyrolls; at the date of the last Decennial Census, (June $l_{0}$ 1941), the manufacturers furnishing monthly data omployed approximately 93 poco of all persons onumerated as at work in manufacturing.

In mining and construction, data on hours and earnings are currently averiable for some 85 poco and 83 pocos of the total employess reported to the monthly surveys of employment and payrolls in those industries. respectively; at June 1, 1941, the co-operating mine operators had employed over 96 poco of all wage-aarners at work as enumerated in the Census, while the omployers in construction whose statistics were then recelved had reported over 79 poc. of the Census total of employees at work in that group. It should be noted that the comparisons with the Consus figures are complicated by differences in the classifications used in compling the two series, so that the percentages of coverage are only approximate.

Man-Hours.- The statistics of manohours include overtime as well as the hours worked by partotime and casual workers. Hours credited to persons absent on leave with pay in the recorded pay period are included in the statistics as though the hours for which payment was made had been worked.

Wages. ${ }^{-1}$ The wages reported ropresent gross earnings before deducíons are made for taxes, unemployment insurance, etc.; they do not, homever, include the valuo of board and lodging which in some cases is part of the remmeration of workers. Incentive and production bonuses and overtime payments are included, as are sums paid employees absent on leave with pay during the pay period for which statistics are given. The figures of average weekly wages result from the multiplicettion of the average hours worked during the period of observation, by the average hourly earnings reported in the samn period.

Pay Perfodso- Statistics of manohours and hourly wages reported for poriods exceoding one week in duration are reducsd by the appropriato proportions to obtain for tabulation purposes the number of hours worked and tha hourly earninga in one week in the indicated pay periods such information is then added to the data furnished by employers who pay on a weokly basis. so that, in all cases, the tabulated data represent the siturtion in one week in aach montino

## $\bullet$

SUMAREY．

In manufacturing，there was an increase of 3.4 poco in the ageregate hours reported by leading，establishments in the meak of July 1 ，as compared with that of June 1，when the observance of the Victoria Day and Ascension Day holiciars had aqusod a sharp drop in the number of hours worked．The celebration of St．Jean Baptiste Day， however，affected the sitution in some incustries in quebec during the week under roview．The hours worked by wape－earners on the stafs of the comoporating electric railwavs and other local transportation companiss were greater in the ageragate，by 1．5 pos．during the pay pariod undas reviem than during the week of June 1；the average wrorking weak also increased．Ir building construction，the agkragate hours of work reported by leading firms rose by 11.1 posog and the number of their wage－arners by 9.7 p．e．as compared with a month earlier．The average working time rose by half an hour．In the service industrios for which data are available，the aggregate hours reported rose by 4.3 pos．o，end the numiter of wage－earners，by 3.5 poc．The average working week was three ifiths of an hour longer

In manufacturing，the ageregate wages distributed by the firms furnishing data increased bv 3.3 poos during the pay period under review，in which the average hourly earnings fell by one otenth of a cent．This decrease，which was the first indicated in manufacturing sinos liaro 1,1545 ，was largely due to seusonal and other changes in the industrial distributjon of wage eamers ior whom statistios ware furnishad at July 1 ，together with reductions in the amount of premium overtime reported in some industries ane establishments．In minime，the total wates roported rose by is． 2 poco， but the average hourly eamings iropped by threewifths of a cent as compared with June 1，the latestifigure standing at 116.4 cents．In local transportation，the disbursements of leading conpanies in weokly \＃ares increasod by 1.9 poco since the proceding return，and the average hative enmings rose by twouififths of a cent．In the reporting service industries，the agerogete wages rose by four pooo，but the average hourly oarnings declined from S4：2 cents at June 1 to 63.7 cents at July 1。 The building contractors whose revums were tabulatod at Juiy 1 showed an increase of 11.3 p．c．in their s弓gregate pages，while the average hourly earnings of their wage－ earners rose by three－tenths of a dentio

## 1．Minnifroturing．

Average Hours Workodo There was an increase of one hour in the average working time reported in manufacturing as a whole during the week of July 1 as compared with the same pay period at the beginning of June wich had included the Victoria and Ascension Dry holidays．The wooking week was decidedly longer in the lumber and iron and steel products，tobacoo processing boverage nanufacturing，and a number of other industries．Curtailment in oporations in the province or quebec on St。Jean Baptiste Day affecten the length at the working vonk in some industries in the period under review．

In factories menufecturny darable goods．the ngeregate hours reported rose by 3.1 poe．as compared with the weok of June $l_{0}$ in spite of a docrease of 0.1 poc．in the number of wage earners．The average hows worked stood at 42．4，exceoding by 1.3 hours the figure indicoted a month efrlier：a year aro the workinf，time had been reported as 42.3 hours．The aperegate tours worled in the comperating factories in the light manufactured goods divi sion as $h_{1}$ ly I were hirger by 3.5 poce than in the yree：－of Juns 1 ，while the worline werts the averace was 0.7 hours longer．The

number of wage-earners for whom manhours mere raported increased by tiro poc. during the period under review; the gains were mainly due to saasonal activity in food processing plants.

Hourly Earnings.a The average hourly earnings roported by the larger manufacturing establishments fell by ona-tenth of a cert from June 1 to July 1, to 99 cents at the latter date. This was the first decline indicated since liar. 1, 1946; the June 1 and Julv 1 averages, however, were the highest in the record. Hageeamers in the durable goods group earned, on the average, 106.6 cents per hour, as compared with 106.5 cents a month earlier. No important changes wero noted in the varicus branches of this division, in which the aggregate wages reported increased by 3.2 poc. during the period under reviev. In the light manufactured goods division, the hourly earnings fell by three-tenths of a cent, to 91.2 cents. Less work at premium overtime rates, and seasonsl activity in food processing plants, resulting in the employment of large numbers of persons trken on at lower-than-average rates, were the most important factors in this decline. The june 1 and duly? averages, were nevertheloss higher than in uny earlier month. The aggregate wages paid hy the co-operating firms in this category rose by 3,3 poe. at July 1 as compared rith June 1.

Averare Wealy Names. - The average woelly wages of hourlyrated wage-earners emploved by leading manufacturing establishments stood at $\$ 41.38$ at duly 1 , as compared with $\$ 40.43$ at the beginning of June, when as already stated, the observance of holidays had affected the situation. In the heavy manufactured goods class, the indicated weakly wages averaged $\$ 45,20$, as compared with $\$ 43.77$ during the weok of June 1. In the non-durable goods division, the figure rose from ${ }_{2} 37.06$ at dune 1 , to $\$ 37.57$ during the period under review.

Table 8 gives a comparison of the uverage weekly salaries and vages reportod monthly by leading manufacturers since July $l_{6}$ 1845, with the avarage preekly wages paid the wagomearners for whom they keep a record of hours workod. The former figures include wageweamers paid by the hour and emploved on other terms, as well as workers paid by salazy and commissions. On the whola, however, the wagemearners for whon statistics are givon in the pasent bulletin, as show in Table 3, form important proportions of the total persomel of the cooperating establishments. At the baginning of $\mathrm{Jil}_{\mathrm{g}}$ such emplovees made up $74.7 \mathrm{p}_{\mathrm{o}} \mathrm{c}_{\mathrm{c}}$ of the total number of porsons of all categories on the payrolls of the manacturers/furnishing monthly statistios on employment und puyrcils at the same date; in the heary manufratured goods industries, the ratio was $77.7 \mathrm{p}, \mathrm{co}_{0}$, and that in the light manuracture i goods division, 72 p.c.

The high proportions which the hourlyrorated wage-earners constitute of the total emplarees of the cowoperntine establishrmats land interest to the data in Table 8. In the month, the combined salarieswandwages rigure increased by 78 cents as compared with a gain of 05 cents in the weekly wages of the hourlymated personnel. In the heave manufactured goods industriss, the reporting plants indicated a rise of \$1.28 in the month in the salaries-and-wages figuro. while the weekly earmings of hourlorated wagemarners mornted by 31.43 . In the non-aurable manufactured goods industrics the average weakly eamings of the parsons on salaries and wages at July 1 increased by 37 cents, while those of the hourly-atod persomel wore 51 cents hifher.
2. Non-Mamuracturire Indust-ies

In many of the mon-mawfacturing industries, few if any of the wage earners
 bulletins on Bmplowent and Yanolis. It, is estimated thut the salaried porsonnel in manufacturing as a whole usumily make up 16 poc. to 17 poco of the total number of emplovens. Attention is called to the explanalory notes facing the first page of this bulletin.
are paid by the hour, with the result that a precise record of the hours worked is nut kept. The representation of the nonmanufacturing industries in this bulletin is tharefore less than that, in the manfacturing classes. The following notes deal briefly with the statistics for several of the non-mamufacturing classes.

In the woek of July 1 , there were increases in the aggrogate and average hours worked and in the average weckly wages reported in the coal mining industry, reversing the trend indicated in recently proceding months. The average hours worked rose by $\$_{0} 2$ hours, to $37 . ?$ hours, while the weekly wages were $\$ 4.78$ higher, bringing the latest figure to $\$ 47.43$ c. On the other hand, the average hourly earnings fell during the same pericd from 127.3 cents to 125.8 cents; in part, the decline resulted from changes in the levels of activity in different areas. ifagecoamers engaged in the extraction of the metallic ores worked an average of 45.7 hours in the weak of July 1 , or throe-tenths of an hour longer than in the weok of Jue 1 . During the same poriod, the hourly earnings foll by two-fifths of a cent, bringing the latest figure to 115.6 cents. In the non-metallic mining group, the average working week rose from 40.8 to 41.8 hours in the week under review, while the hourly earnings dropped by sevenctienths of a cent, to 103 cents. The number of wage.eearners reported increased by $10.2 \mathrm{~F}_{0} \varepsilon_{0}$, mainly because of resumption or expansion of operations in certain asbestos mines in Quebec which had been affected by labourc managen:ent disputes.

In the local transportation group, the avarage hours worked were somewhat higher than a month earlier, while the average hourly earnings advanced by twofifthe of a cont to a new maximum of 99.5 cents. In building construction the number of wage-earners reported rose by $S_{0} 7$ p.c.. reflecting haightenod seasonal activityo the average number of hours wrrked increased from 38.6 hours in the week of Juns 1 to 39.1 hours in that of july is the average hourly earnings also showed an upwarc movement, rising from 107 cents at the former date to 107 , z cents at the date under review. In highray construction, the number of wage -oarners for whom the reporting establishments furnished statistics of manohours at July 1 as compared with a month earlier rose by $7.5 \mathrm{p}, \mathrm{co}$, with the continued development of the sumuer construction programe. During, the same period, the aferegate hours worked by their employees and their ageregate weekly wages momnted by 1 ? $p_{0} c_{0}$ and 11.7 po. o, respectively. The average workinf weak was longer by 1.6 hours, the latest figure standing at 39.7 hours, but the average hourly earnings fell by three uterths of a cent, to 84.8 cents. With the opening of summer resorts, the number of wage eearners reported in the hotel and restaurant industry increased by 4.8 . 0.0 , and the average hours rose from 42.7 to 43.2 hours in the woek of fuly $l_{0}^{\prime}$. In the same comparison, the hourly earnings fell from 63.5 cents a month earlier to 62.5 cents. due to the employment of larger numbers of lower-paid assual help. The hours worked by wage-earners in the cooperating laundries and dry-cleaning establishments increased by three fifths of an hour during the period under review, while the average hourly earnings rose by tirofifths of a cent, to 66.? conts at July 1 。

## 3. Provincial Statistios for leading Industries.

The average hours worked in manufacturing as a whole in all provinces except Nova Scotia and Saskatchewan in the week of July 1 were longer than those reported at June 1, when the Victoria Day holiday had arfected the situation. In Nova Scotia, the average was slightly shortor, falling by oneofifth of an hour to 43.1 at the period under review, largely due to reduced hours in shipyards. In Saskatchewan, the petroleum and several other industries reported a shorter working woek, reducing the general avorage in manufacturing for the province from 43.3 hours in the preceding return, to 42.7 hours in the wosk of duly $l_{0}$ There was an increase of three-tenths of an hour in wixeber, where the average working time nevertheless remained below normal. because of the celobration of St. Jean Baptisto Day in the week precoding July $I_{0}$ As compared with a year ago, declines wore reported in all provinces but Ontario and Saskatcheman. varing fon one tenth of an hour in Manitoba
to one hour in New Brunswick．In Cntario，there was a minor increase of one－tenth of an hour，while in Saskatchewan the working week was seven－tenths of an hour longer in the period under review than in the week of July $1,1948$.

Table 4 shows slight decreases at July 1 as compared with June 1 in the general suerages of hourly earnings in manufacturing in all provinces with：the exception of New Brunswick and Queboc．The most marked decline was in Nova Scotia，where the general average fell from 92.6 cents to 88.1 cents；the former figure had been unusually high，reflecting considerable premium overtime work performod on Victoria －Day in the relatively highly－paid iron and steal industry．The roductions in the other provinces varied from onemtenth of a cent in British Columbia to ninemtenths of a cent in Manitoba．Less overtime work at premiun rates，and the emploment of larger numbers of lowerapaid casual help in the fruit and vegetable carning industrics， were largely responsible for these declines．In New Brunswick，longer working hours in the shipbuilding industry caused an increase of threeotenths of a cent in the general averape in manufacturing at July 1；in Quebec shorter working hours in the textile industries，together with a longer working week reported in the pulp and paper and iron and steel industries，were important，fectors in the increase of three－ fifths of a cent in that province．In considering the changes show over past years in the table on page 2，it must again be pointed out that the industrial and the related sex distribution of the wage oarners reported by leading firms in the various provinces have an important influence on the differences in the amounts by which the hourly eamings in manufacturing as a whole heve risen．

## 4．Statistics for the Larger Citios．

All five cities for which statistics of man－hours are published，reported somewhat higher hours at Julv 1 than at June 1，when the pay period surveved had included the Victoria Day and Asconsion Day holidays．In Montreal，the average hours． while slightly higher than in the preceding report，continued below the nomal levol． largely because of the ridespread cbservance of St．Jean Baptiste Dey in the woek preceding July l．Increases in the other cities varied from fourofifths of an hour in Hamilton，to 1.5 hours in Winnipeg．

The reported hourly earnings in manufacturing as a whole were lower in Toronto and Winnipeg，whils no change was reported in Hamilitori and Vancouver．In Montreal． there was an increase of 0.3 cents bringing the latest figure to a new maximum of 95.7 cents；the higher figure largely resultod from longer working hours in the 1 年on and steel industry，where rates are above the general average．In Toronto and Winnipeg．less work at premium overtime rates and increased employmont of lower－paid casual help in food－processing plants，lowered the general average as compared with a month earlier．

The advances in the average hourly rates in the larger cities at July 1 as compared with the same date in earlier vears，as shown in Table 5，were considerable。 As was mentioned in convection with the provincial averages，it is important to note that the variations in the average rates in manufacturing as a whole in the cities are due，in part，to differences in the industrial distributions of the wagemearners for whom statistics are available．The related sox distribution of the wagemearnars reported by leading establishments in the various provinces and cities also have an important influence on the differences in the amounts by which the hourly oarninfs in manufacturing as a whole have risen。
that Intont figuras are subjact to ravision).
