> EXPLANATION OF THE TERNIS USED IN THIS REPORT.

Wage-Earners.- Leading emplovers are asked to furnish monthly statistics on man-hours on behalf of those wage-earners for whom they keep a record of aggregate hours worked, so that the data relate, in the main, to persons employed at hourly rates. Information for salaried employees is purposely excluded, while in many cases, statistics of man-hours are not available for certain classes of wage-earners, whose earnings, like those of most salaried enployees, are not directly dependent upon the number of hours worked; examples of wage-earners frequently excluded are route drivers, piece-workers in many but not all establishments, truck men, etc. In addition, some employers do not keep a record of man-hours for any classes of emplovees. Accordinply, the number of workers for whom statistics are given in the present bulletin is smaller than the total number of employees, (salaried personnel and wage-earners) for whom statistics of employment and payrolls are obtained in the monthly surveys on these subjects; the results of these surveys are published in the monthly bulletins on employment and payrolls, which also contain data relating to the sex distribution of the workers in recorded employment, an important factor contributing to differences shown in the average earnings in various industries.

The monthly statistics of average hours and average hourly earnings, like those of emploment and average weekly earnings relate, in the main, to establishments usually employing 15 persons and over, the smaller firms being excluded for reasons of economy in terms of cost and time. In the case of the manufacturing industries, (largely represented in the material of the present bulletin), the statistics relate to over 75 p.c. of all the monthly surveys of employment and payrolls. The factories furnishing monthly data on man-hours and hourly earnings in 1946 empluyed over 81 p.c. of the total wage-earners reported by all manufacturing establishments in the same year, including wage-earners paid by the hour and those employed on other terms.

In mining and construction, data on hours and earnings are currently available for some 85 p.c. and 83 p.c., of the total employees reported to the monthly surveys of employment and payrolls in those industries, respectively; at June 1, 1941, the co-operating mine operators had employed over $96 \mathrm{p} \cdot \mathrm{c}$ 。 of all wage-earners at work as enumerated in the Census, while the emplovers in construction whose statistics were then received had reported over 79 p.c. of the Census total of employoes at work in that group. It should be noted that the comparisons with the Census figures are complicated by differences in the classifications used in compiling the two series, so that the percentages of coverage are only approximate.

Man-Hours.- The statistics of man-hours include overtime as well as the hours worked by part-time and casual workers. Hours credited to persons absent on leave with pay in the recorded pay period are included in the statistics as though the hours for which payment was made had been worked.

Wages. - The wages reported represent gross eamings before deductions are made for taxes, unemployment insurance, etc.; they do not, however, include the value of board and lodging which in some cases is part of the remuneration of workers. Incentive and production bonuses and overtime payments are included, as are sums paid employees absent on leave with pay during the pay period for which statistics are given. The figures of average weekly wages result from the multiplication of the average hours worked during the rariod of observation, by the average hourly earnings reported in the same period.

Pay Poriods. - Statistics of man-hours and hourly wages reported for periods exceeding one week in duration are reduced by the appropriate proportions to obtain for tabulation purposes the number of hours worked and the hourly earnings in one week in the indicated pay period; such information is then added to the data furnished by employers who pay on a weekly basis, so that, in all cases, the tabulated data represent the situation in one week in each month.

# STATISTICS OF MAN-HOURS, HOURLY EARNINGS AND WEEKLY WAGES AS REPORTED BY LEADING EMPLOYERS AT SEPT. 1, 1949. 

## SUMMARY.

In manufacturing, there was an increase of 2.4 poc. in the aggegate hours reported by leading establishments in the week of Sept. 1 as compared with Aug. 1. The advance in workinf time is partly accounted for by the return to more normal working hours following the midsumer vacation period, and in part, is due to ereater seasonal activity in some industries. The number of factory wage-earners for whom man-hours were reported increased by 1.2 p.c. in the period under review, while the average working week was half an hour longer. IIne operators reported an increase of 0.5 p.c. in the aggregate hours worked in their establishments, accompanied by a gain of 0.8 p.c. in the number of the wage-eurners on their staffs. The average working week at Sept. 1, however, at 42.8 hours, was one-tenth of an hour shorter than at Aug. 1. The total hours worked by wago-earners in the reporting local transportation companies were 1.9 p.c. higher at Sopt. I, as the number of wage-earners increased by 0.8 p.c. and the average working, week rose from 45.6 hours at Eur. 1 to 46.1 hours in the week under review. The average hours worked by wace-earners in building construction increased onlor sliphtly during the period unds: review, the gain of 3.5 p.c. in the aggregate of hours worked being accompanied by an increase of 3.2 p.c. in the total number of wage-earners. In those branches of the service division for which data are avalable, the number of wage-earners declined by 0.8 p.c., while the aggregate of hours worked fell by 0.2 p.c.; the average hours worked increased from 42.2 hours in the week of Aug. 1 to 42.5 hours in that of Sept. 1.

In manufacturing, the reported wages rose be two p.c. during the pay period under review, but the proportionally greater increase in aggregate hours worked resulted in a decline of 0.3 cents in the average hourly earnings as compared with Aug. 1. In mining, the increase of 0.5 poco in the reported wages in the period under review was accompanied by a similar increase in the aggregate hours worked; thus the average hourly earnings remained unchanged, at 115.9 cents. The aggregate weeklv parrolls of hourlv-rated wage-eamers emploved by the co-operating electric railwavs and other local transportation companies increased bur 1.6 f.c., but the average hourly earnings of their emplovees fell from 101.6 cents at Aug. 1 , to 101.3 cents at Sept. 1. Building contractors reported an increase of 4.5 p.c. in the total wages thev disbursed; the average hourly earnings of members of their staffs were one cent higher at the latter date. In the service divisions for which data are available, the wages reported declined by 0.7 p.c., and the average hourly earnings were 0.3 cents lower than a month earlier.

## Manufacturing.

Average Hours iorked. - At Sept. l, leading manufacturing establishments reported that their wage-carners worked on the average, a half hour longer than during the week of Auge 1. The latest figure of 42.4 hours por week, wras the highest since the weok of lay 1; the situation in the intervening months having been affected by holidays and the hot weather, as well as by other factors. The average at Sept. 1 was seven-tenths of an hour longer than at Sept, 1,1948 , when the figure had been affected by extremely hot weather. While the number of wage-earners decreased by 0.5 p.c. at the date under review in the durable goods division of manufacturing, the reported aggregate of hours worked increased by 0.7 p.c., resulting in a general increase of a half hour in the working week. While a longer working week was reported in all major branches of this division, the incraases in the lumber and iron and steel groups were the most important.

Table A. - Increases in the Average Earnings of Persons Emploved by Leading Establishments at Sept. l, 1949, as compared with the same date in proceding years.

## CANADA

All Manufacturing
Durable Manufactured Goods
Non-Durable Mannfactured Goods

The aggregate hours reported in the light manufactured goods division increased by 4.1 p.c. at Sept. 1 as compared with the week of Aug. l, while the number of wageearners increased by 2.8 p.c. in the same comparison. The working week in the period under review was 42.6 hours, compared with 42.1 hours at Aug. 1. The average hours worked increased in all the major industries in the group with the exception of animal products, pulp and paper products and heverages. The gains in canning, factories, garnents and personal furnishings and other branches of the textile industry were most marked. At Sept. 1, 1948, the hours reported in the light manufaotured goods division had averaged 41.5 hours.

Hourly Eamings. - The average hourly earnings reported by the larger manufacturing establishments at Sept. 1 were 98.5 cents, 0.3 cents below the Aug. 1 figure, and 0.6 cents lower than the maximum of 99.1 cents recorded at June 1 and July 1 。 The decline in the latest figure is largely due to changes in the industrial distribution of the reported wage-earners, there being increased employment of lower-paid workers in canning factories and heightened activity in the textile group, where earnings tend to be below the general average, mainly due to the large proportions of women wageearners. As noted above, the increase in the aggregate hours in the non-durable division, with average hourly earnings of 90.5 cents, increased by 4.1 p.c. at Sept. 1, while firms manufacturing durable goods, paring an average wage of 106.7 cents per hour, reportad an increase of only 0.7 p.c. in the apgregate hours in their establishments. The declines in the Aug. land Sept. 1 averages as comnared with immediately preceding months are the first reported since Mar, 1, 1946, and are largelv seasonal in character. In the last few vears, however, the seasonal factor has been largely counteracted by steadily-rising wage rates. At Sopt. 1, 1948, the average hourly earnings in manufacturing as a whole stood at 93.4 cents.

Wage-earners in the durable goods division of manufacturing received 106.7 cents an hour at Sept. 1, 1949, the maximum on record; at Augo, 1, the average hourly earnings were 106.5 cents an hour. Within this division, increases in the period under review were indicated in all major industries with the exception of clay, glass and stone establishments where there was an insignificant drop of one-tenth of a cent in the the month. In all groups, the latest figures were above those indicated a year earlier.

The average hourly earnings reported in the non aurable manufacturing industries fell by three-fifths of a cent at Sept. 1 as compared with Aug。1. Declines in average hourly eamings were recorded in edible plant, rubber and non-metallic mineral products. The change in the general figure, however, was due in a greater extent to longer working hours reported in industries in which eamings generally are below the average in the group, together with a decline in the aggregate hours worked by wageearners in the highly paid pulp and paper establishments. The average hourly eamings in the light manufacturing division, at 90.5 cents at the date under review, were 5.5 p.c. higher than at Sept. 1, 1948.

Average Weekly Wages. - The aggregate wages paid to the hourlyorated wege-earners emploved by the larger manufacturing establishments at Sept. I were two poc. higher than at Aug. 1. The roported week ly wages averaged $\$ 41.76$, as compared with $\$ 41.40$ at Aug. 1, 1949, and \$38.95 at Sept. 1, 1948. In the heave manufactured goods class, the average weekly wages increased by 61 cents, to reach $\$ 45.45$ at Sept. 1. The average weekly wages in the non-durable goods division were 20 cents higher than one month earlier, the latest figure being \$38.19.

Table 8 gives a comparison of the average weekly salaries and wages reported monthly by leading manufacturers since September l, 1945, together with the average weekly wages paid the wage-eamers for whom they keep a record of hours worked. The former figures include wage-earners paid by the hour and those paid at other rates, as well as workers paid by salary and commissions. On the whole, however, the wageearners for whom statistics are given in the present bulletin, as show in Table 3 , form important proportions of the total personnel of the comoperating establishments.

At the beginning of September, such emplovees made up 74.4 p.c. of the total number of persons of all categories on the parrolls of the manufacturers ${ }^{2}$ furnishing monthly statistics on emplovment and parrolls at the same date; in the heavr manufactured goods industries, the ratio was $77.4 \mathrm{p} . \mathrm{co}$, and that in the light manufactured goods division, 71.7 poc。

The high proportions which the hourlvmrated wage-earners constitute of the total emplovees of the co-operating establishments lend interest to the data in Table 8. Ir the month, the combined salaries-and-wages figure for manufacturing rose by 21 cents, as compared with an increase of 36 cents in the weekly wages of the hourlymrated personnel. In the durable goods division, the weekly wages advanced by 61 cents in the period under review, as compared with an increase of 55 cents from Aug. I in the combined weekly salaries-and-wages figure. Although there was a decline of two cents in the average weekly earnings of persons on salaries and wages in the non-durable manufactured goods industries at Sent. l compared with a month earlier, the average weekly earnings of hourlymated personnel yere 20 cents higher.

## 2. Non-lianufacturing Industries.

In many of the non-manufacturing industries, few if any of the wage-earners are paid by the hour, with the result that a precise record of the hours worked is not kept. The representation of the non-manufacturing industries in this bulletin is therefore less than that in the manufacturing classes. The foliowing notes deal briefly with the statistics for several of the non-manufacturing classes.

The average working time of 38.4 hours a weok reported for the wage-earners of coal-mining companies for the week preceding Sept. 1, was slightly below that reported one month earlier. At the same time, the average hourly earnings in the industry declined from 127.4 cents to 126.9 cents, largely as a result of shorter working time in some companies which pay above-average hourly rates. The average hours worked in the metallic ore division of mining declined from 4.5 .1 hours at Aug. 1, to 44.9 hours at Sept. 1, while the average hourly earnings showed an advance of three-fifths of a cent, due to the parment of higher production bonuses by certain companies during the period. Seasonal increases in emplorment for casual help at comparatively low rates of pay in the peat bogs of British Columbia were partly responsible for the decline of 0.5 cents in the hourly earnings reported in the non-metallic mining industry in the period under review. The average hours worked rose from 43 at aug. 1 to 43.7 hours in the week of Sept. 1 .

The hours worked by wage-eamers in local transportation companies averaged a half hour longer during the week of Sept. I than during the same pay period one month earlier. The latest figure was 46.1 hours. Seasonal activity in grain elevators and additional service provided by street railways for exhibitions occurring during the
week under reviow we contributing factors in the longer working week reported. The average hourly earnings declined from the Alig. 1 maximurn of 101.6 cents to 101.3 cents at Sept. 1. There was only a slight change in the working time of wage-earners in building construction, the average being 41.2 hours in the week of Sept. 1, compared with 41.1 hours one month earlier. In the same comparison, there was a reversal in the downard trend of average hourly earnings noted in the past few months explained by the emplovment of large numbers of unskilled workers; the average earnings for the industry increased from 106.7 cents at Aug。 1 to 107.7 cents an hour at Sept. 1 . As mentioned in earlier reports, the varying proportions of skilled and unskilled wageearners emploved from time to time by construction companies exert a marked effect on the hourly earnings in that incustry. At Sept. 1, 1948, the earnings of workers 1/That is, of establishments ordinarily emploving 15 persons and over. See the monthly bulletins on Employment and Payrolls. It is estimated that the salaried personnel in manufacturing as a whole usually make up 16 poc. to 17 poc. of the total number of emplovees. Attention is called to the explanatory notes facing the first page of this bulletin.
reported in building construction had averaged 103 cents per hour. In highway construction, the average wage-earner on the staffs of the co-operating firms worked one-fifth of an hour less at Sept. 1, than one month earlier. The average hourly earnings in this industry increased from 83.7 cents at Aug. 1 to 85.7 cents at the date under review, largely as a result of the lay-off of lower-paid casual laborers in some provinces. There was little change in the number of wage-earners reported by hotels and restaurants; the average working weok indicated in the industry was slightly longer, increasing from 43.2 hours in the last return, to 43.4 hours at Sept. 1. During the same period, the average hourly earnings dropped from 62.1 cents to 61.5 cents. There were increases in the average working week and in the average hourly oarnings in the reporting laundries and drymoleaning establishments in the period under review; the average working time increased by two-fifths of an hour to 40.5 hours, and the average hourly earnings, by three-tenths of a cent, to 66.2 cents.

## 3. Provincial Statistics for Leading Industries.

As compared with one month earlier, the general averages of hours worked in leading manufacturing establishments in all provinces except New Brunswick were higher in the week preceding Sept. 1. Annual vacations and hot weather had contributed to the shorter-than-average working time reported in most provinces for the week preceding Aug. 1. The average hours per week in marufacturing establishments in New Brunswick declined by three-tenths of an hour in the period under review, largelv as a result of the reduced working time in fish and vegetable food processing plants. The average worktng week in manuacturing, was seven-tenths of an hour longer in quebec, where increased activity was indicated by firms in all major manufacturing industries with the excoption of the baverage, clay, glass and stone product and nonwerrous metal groups; the incroase was particularly marked in the textile and iron and steel industries. In Manitoba, the wage-oarners in manufacturing for whom man-hours data were reported worked, on the average, half an hour longer than during the waek of Aug. 1. At Sept. 1, the average indicated in Ontario was 41.8 hours, compared with 41.4 hours at Aug. 1; increases were noted in practically all the more important manulacturing industries in the province. Greater activity in lumber mills largely accounted for the increase of three-fifths of an hour in the working week reported in manufacturing in British Columbia generally. As compared with Sept。1. 1948, whers the working time in the central provinces had been affected by very hot weather, the average hours worked were longer at Sept. 1, 1949, in all provinces except Nova Scotia and New Brunsvick。

An advance in average hourly earnings in manufacturing as a whole was reported by firms in Nova Scotia and New Brunswick in the period under review. Increased employment in the relatively highlywpaid primary iron and steel industry, combined with short time in fish-processing plants raised the general average in manufacturing in Nova Scotia by 0.8 cents as compared with a month earlier. The average earnings in New Brunswick rose from 87.1 cents an hour at huge 1 to 87.8 cents an hour at Sept. l, largely due to longer hours reported in pulp and paper mills and iron and steel factories, together with the lavodff of casual help in fish-processine establishments. In British Columbia, increases in the number of low-paid casual help in foodprocessing plants, together with decreased emploment and reduced overtime in the iron and steel group, resulted in a decline of 1.2 cents in the average hourly earnings in manufacturing as a whole at Sept. 1 as compared with a month oarlier. The average hourly earnings in manufacturing in Ontario were six-tenths of a cent lower than at Aug. l, largelv becouse of chanpes in the industrial distribution of factora workers:

[^0]Although the average hourly earnings in most of the provinces were somewhat lowe:
at Sept. 1 than in the preceding month, the figures in all areas were well above the averages for Sept. 1, 1948, when there had been widelyadistributed increases in the averages as compared with a month earlier; the general average in Canada had risen by seven-tenths of a cent. In considering the changes shown over past vears in the table on page 2, it must be remembered that the industrial and the related sex distribution of the wage-earners reported by leading firms in the various provinces have an important influence on the differences in the amounts by which the hourly earnings in manufacturing as a whole have risen.

## 4. Statistics for the Larger Cities.

As shown in Table 5, the average hours worked by hourly-rated wage-earners in leading manufacturing establishments in five of the larger cities were longer at Sept. 1, 1949, than a month earlier. Montreal showed the greatest change, the average hours worked rising from 41.3 at Aug. 1 to 42.4 at Sept. 1 , due to longer working hours in most of the major industries. The hours worksd in the reporting establishments in Hamilton and Vancouver increased by seven-tenths of an hour, and in Toronto and Winnipeg, by two-fifths of an hour in the same period. In large measure, the higher figures indicated at the date under review resulted from a return to more normal working hours following the popular midsumer vacation period. The working week was longer in all cities in the week of Sept. I than in the corresponding week one vear earlier, when extreme heat affected the situation in the central provinces. The increases at the date under reviow ranced from 1.5 hours in kontreal, to one-tenth of an hour in Vancouver.

Although the average hourly earnings in Winnipeg and Toronto were higher at Sept. I than at Aug. 1, the increases were slight, amounting only to 0.3 cents and 0.1 cents per hour, respectively. In Montreal, the average hourly earnings declined by 0.3 cents, largely as a result of the longer hours worked in industries in which rates of pay are lower-than-average. The average hourly earnings at Sept. 1 were four-fifths of a cent lower in Vancouver, a reduction in overtime worked by wageearners in iron and steel factories being a contributing factor. The situation in Hamilton showed no general change.

During the past year, the hourly earnings in manufacturing in the larger cities have risen as follows: Montreal, 5.4 cents; Toronto, 4.8 cents; Hamilton, 8.1 cents; Winnipeg, 3.2 cents and Vancouver, 10.2 cents.

The advances in the average hourly rates in the larger cities at Sept. 1 as compared with the same date in earlier years, as shown in Table A and Table 5 were considerable, although the rates of increase are not so large as those indicated in preceding reports. It should again be pointed out that the variations in the average rates in manufacturing as a whole in tho cities are due, in part, to differences in the industrial distributions of the wage-arners for whom statistics are available. The related sex distributions of the wage-earners reported by leading establishments in the various provinces and cities also have an important influence on the differences in the amounts by which the hourly earnings in manufacturing as a whole have risen.

Table 1.-Averago Hours and Average Hourly and Feokly Earnlnge of Wage-Earners for Hhom Data are Available at Sept.l, 1949. With Comparative Figires for Auc. 1, 1949 and Sept. 1, 1948.
(The latest figares are subject to revision).

* The industries classed in the durable manufactured goods industrien are indicated by an asterisk.

1/Sinoe 1941 , the Lominion Bureau of Statistics has prepared current indexes of average hourly earning of the empioyees of ofgt astoblishments producing heavy electrical apparatus. Based upon the hourly earnings at June 1 , 194, as $100 \mathrm{p} . \mathrm{c}$, , the latest figuris are as
follows - July 1, 1949, 228.5; Aug. 1, $1949,228.8$, Sept. 1, 1949, 228.1; at Sept. 1, 1948, the Index wes 216.6.
2/Chiefly street and olectric railways.
3/For information respecting the sex distribution of the persone in recorded employment, fee monthly bulletins on employment and payrolle.

BHISIOTHOUE STATISTIQUE CANADA

[^0]:    textile mills reported heightened activity and there was a seasonel increase in omployment for relatively unskilled help in canning factories. A decrease in the aggregate hours worked in the more highlympaid pulp and paper and iron and steel industries was also a contributing factor in the decline in the general average. The changes in the average hourly earnings manufacturing as a whole in the other provinces wre slight.
