EMPLOYMENT AND EARNINGS REPORTS

Following are other publications of the Labour Division based upon establishment data in the field of industrial employment, earnings and hours:

72-001 - Advance Statement on Employment and Weekly Earnings - Monthly - Price \$1.00 per year

(index numbers of employment and averages of weekly wage and salary statistics for Canada (major industrial divisions) and the provinces (industrial composite figures))

72-002 - Employment and Payrolls - Monthly - Price \$3.00 per year

(industry and area index numbers of employment and payrolls and averages of weekly wage and salary statistics; comparisons with earlier periods; charts and explanatory material)

72-005 - Estimates of Labour Income - Monthly - Price \$2.00 per year

(monthly or quarterly estimates of wages, salaries and supplementary labour income, both unadjusted and seasonally adjusted, for specific industries and regions; with annual totals from 1951)

72-006 - Hiring and Separation Rates in Certain Industries - Semi-Annual - Price \$1.00 per year

(data for establishments having one or more employees covered by unemployment insurance and employing ten or more persons; also all units of chain or multiple firms, with at least one insured employee, regardless of number employed)

72-201 - Review of Employment and Payrolls - Annual - Price \$1.00

(industry and area index numbers of employment and payrolls and average weekly wages and salaries, monthly and annually, over a lengthy period; charts and explanatory material)

72-202 - Review of Man-Hours and Hourly Earnings - Annual - Price 75 cents

(industry and area averages of hours per week, hourly and weekly wages, monthly and annually, from 1945; charts and explanatory material)

72-203 - Earnings and Hours of Work in Manufacturing - Annual - Preliminary Report - Price 25 cents

(separate figures of earnings and hours for men and women and for wage-earners and salaried employees in one week in autumn for major manufacturing industries, Canada, and manufacturing in provinces and larger metropolitan areas)

72-204 - Earnings and Hours of Work in Manufacturing - Annual - Final Report - Price 75 cents

(separate figures of earnings and hours for men and women and for salaried employees and wage-earners in one week in autumn from 1946 with industrial and area detail; charts and explanatory material. Special data are obtained on a rotational basis in successive years:

- (1) a segregation of office and clerical workers from the salaried group
- (2) a distribution of wage-earners and salaried employees in a given range of weekly earnings and
- (3) a distribution of wage-earners in a given range of hours worked in the survey week)

Inquiries regarding these reports should be directed to the Labour Division, Dominion Bureau of Statistics, and subscriptions to the Publications Distribution Unit, Financial Control Section, Dominion Bureau of Statistics, or to the Queen's Printer, Ottawa, Canada.

PERCENTAGE CHANGES IN AVERAGE WEEKLY HOURS, AVERAGE HOURLY EARNINGS
 AND AVERAGE WEEKLY WAGES OF HOURLY-RATED WAGE EARNERS
 IN MANUFACTURING - CANADA AND PROVINCES
 SEPTEMBER 1963 - SEPTEMBER 1964

MAN-HOURS AND HOURLY EARNINGS - SEPTEMBER 1964

Manufacturing

Average hourly earnings in manufacturing in September increased by one cent. The number of wage-earners reported increased by 0.2 p.c. and average weekly hours were 0.4 hours longer. Average weekly wages, at \$84.72, were \$1.41 higher than in August. In the year-to-year comparison average weekly hours were 0.4 hours longer and average hourly earnings and average weekly wages increased by 9 cents and \$4.43 respectively.

In durable goods manufacturing, average hourly earnings increased by one cent. More activity, to varying degrees, at above-average rates in iron and steel, non-ferrous metals and transportation equipment contributed to the increase. Higher hourly earnings in non-metallic minerals and transportation equipment, and less employment at below-average rates, together with higher hourly earnings, in wood products were also increasing factors. More activity at below-average rates in electrical apparatus has a decreasing effect. Compared with September 1963, average hourly and weekly earnings were 10 cents and \$5.30 higher respectively and average weekly hours were 0.5 hours longer.

Average hourly earnings in non-durable goods manufacturing were unchanged from August. This was the net result of a number of counterbalancing movements. Higher hourly earnings in chemical products, printing and publishing and rubber products, combined with more activity at above-average rates in the latter two industries, tended to increase average hourly earnings. A similar effect was exerted by less employment in food and beverages and shorter hours at below-average rates, together with higher hourly earnings in clothing. Less employment at above-average rates and reduction of premium pay in petroleum and coal and more activity at below-average rates in miscellaneous manufacturing were offsetting factors. In the year-to-year comparison, average hourly and weekly earnings were 6 cents and \$3.35 higher respectively and average weekly hours were 0.3 hours longer.

Non-Manufacturing Industries

The construction industry reported an increase of 3 cents in average hourly earnings, brought about by a reduction in employment of lower-paid workers in highway construction. Average hourly earnings increased by 2 cents in the service industry, due to a seasonal decrease of lower-paid summer employment in hotels.

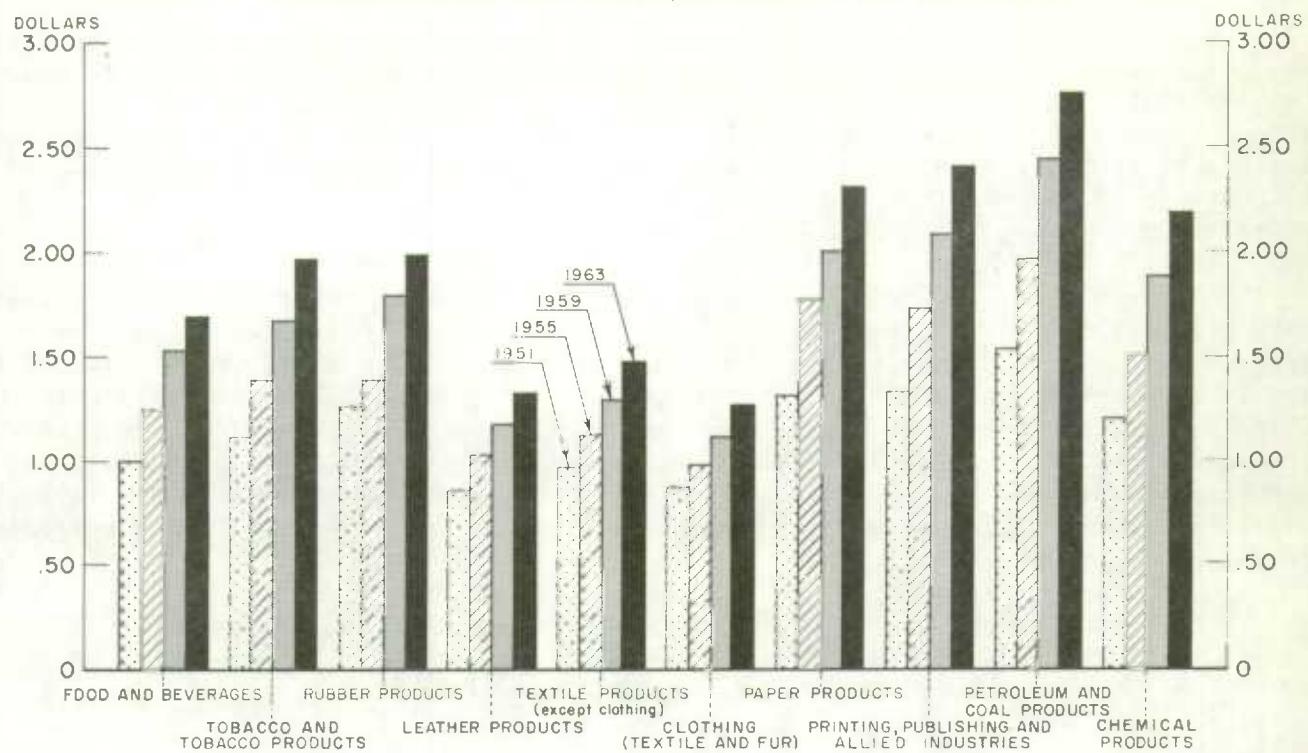

Provinces - Manufacturing

With the exception of Alberta, average hourly earnings in manufacturing increased in each province from last month. The increases varied from one cent in Quebec and Nova Scotia to 4 cent in New Brunswick.

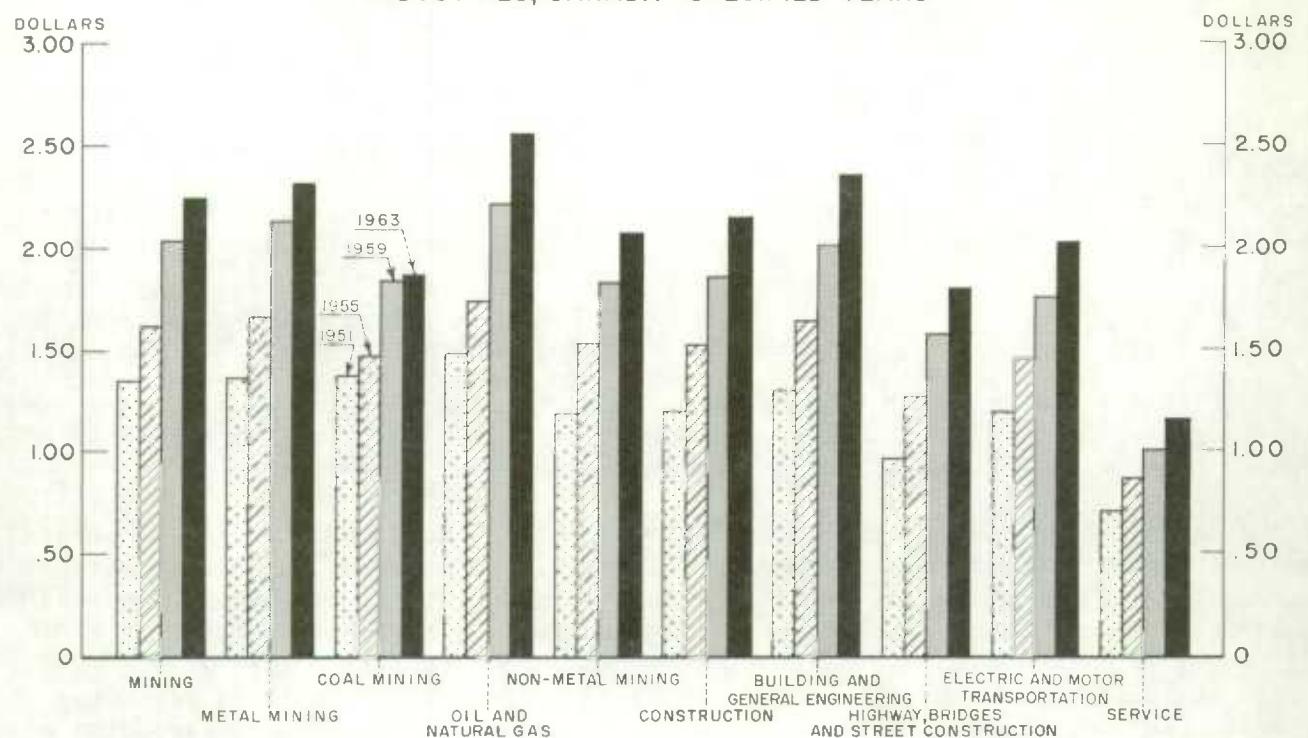

Average hourly earnings increased by 3 cents in Newfoundland. The increase was due to overtime in pulp and paper mills and less employment at below-average rates in food and beverages. The decrease in employment in the latter group was occasioned mainly by seasonal lay-offs in the fish processing industry.

An increase of one cent in average hourly earnings was reported for Nova Scotia. Less activity at below-average rates in food and beverages, caused mainly by seasonal lay-offs in fish processing, was the dominant increasing factor. Slightly less employment at below-average rates in wood products also contributed. The

AVERAGE HOURLY EARNINGS OF HOURLY-RATED WAGE-EARNERS, NON-DURABLE
MANUFACTURING INDUSTRIES, CANADA - SPECIFIED YEARS

AVERAGE HOURLY EARNINGS OF HOURLY-RATED WAGE-EARNERS, IN NON-MANUFACTURING
INDUSTRIES, CANADA - SPECIFIED YEARS

resultant increase was diminished to some degree by less employment in iron and steel and less activity in transportation equipment, where above-average rates prevail.

In New Brunswick, average hourly earnings increased by 4 cents. The increasing effect of overtime and wage increases in saw and planing mills and higher hourly earnings in pulp and paper mills was further strengthened by more activity at above-average rates in transportation equipment. Less employment at below-average rates, due mainly to seasonal lay-offs, in food and beverages was a further increasing factor.

Average hourly earnings in Quebec increased by one cent. The principal expansionary factors originated mainly in industries where above-average rates prevail. There was more activity, to varying degrees, in iron and steel, printing and publishing and electrical apparatus, more employment in transportation equipment, longer hours in chemical products and non-metallic mineral products, together with overtime in petroleum and coal. Less activity at below-average rates in food and beverages, clothing and wood products and higher hourly earnings in textiles also contributed to the increase. A reducing effect was exerted by less employment in paper products and slightly less activity in non-ferrous metals, both of which report above-average rates, and more employment at below-average rates in leather products.

In Ontario, average hourly earnings increased by 2 cents. The increasing factors of overtime in iron and steel, rubber products and wood products were strengthened by wage increases in textiles, non-metallic minerals and chemical products. Longer hours in non-ferrous metals and more activity in printing and publishing and transportation equipment, all industries in which above-average rates prevail, also had an increasing effect. More activity at below-average rates in food and beverages and electrical apparatus, less employment at above-average rates in paper products and petroleum and coal, together with lower hourly earnings in the latter industry, mitigated the increase to some degree.

An increase of 2 cents in average hourly earnings was reported for Manitoba. Higher hourly earnings in clothing contributed to the increase. Although offset to some extent by lower hourly earnings in meat products, more overall activity at above-average rates in the food and beverages group was a further increasing factor. Shorter hours at above-average rates in transportation equipment tended to limit the increase.

Average hourly earnings increased by 3 cents in Saskatchewan. This was mainly due to longer hours and higher hourly earnings in meat products, where rates are above-average, and overtime within the food and beverages group generally.

In Alberta, average hourly earnings were unchanged. The decreasing effect of less activity at above-average rates in non-metallic minerals and transportation equipment was neutralized by shorter hours, at below-average rates, in food and beverages.

A 2-cent increase was reported in average hourly earnings for British Columbia. Longer hours and higher hourly earnings in non-ferrous metals and more employment with higher hourly earnings in steel shipbuilding and repairing, both industries where rates are above average, contributed to the increase. Less employment at below-average rates in food and beverages, caused mainly by seasonal lay-offs in fruits and vegetables and fish processing, further increased average hourly earnings. A reduction of employment, reinforced by lower hourly earnings, in pulp and paper mills had a decreasing effect.

Note: Statistics are based on returns received from employers usually employing 15 or more persons. These returns include data from the last pay period(s) of reporting establishments in each month. The latest figures throughout this publication are subject to revision.

TABLE 1. Average Hours and Average Earnings of Hourly-Rated Wage-Earners, Canada, by Industry

| Industry | Average weekly hours | | | Average hourly earnings | | | Average weekly wages | | | Wage-earners reported September 1964 |

Notes: 1. The current weekly wages relate to the last pay periods in the month, while the Consumer Price Index relates to the beginning of the month. The current average of weekly wages for any month is therefore adjusted in the above table by the Consumer Price Index for the following month, as more representative of the period in which the wages are spent. A statement of uses and limitations of the adjusted figures appears on page ii.

2. For Consumer Price Index statistics, construction methods and component details, see monthly report "Prices and Price Indexes".

NOTES

General.—The monthly statistics of average hours, average hourly earnings and average weekly wages, like those of employment, payrolls and average weekly wages and salaries, are based on data from establishments usually employing 15 persons and over. The latest monthly figures are subject to revision.

Coverage.—Firms are asked to furnish information for the male and female wage-earners for whom they keep records of hours worked, so that the statistics relate, in the main, to hourly-rated wage-earners, or production workers, employed full time and part time. Casual workers are also included, provided that they work at least one day in the reported pay period. Data for salaried personnel are purposely excluded. In many cases, information is not available for certain classes of wage-earners, whose earnings, like those of most salaried employees, are not directly dependent on the number of hours worked; examples of wage-earners frequently excluded are route-drivers, piece-workers in many but not all establishments, truck men, etc. Numerous employers do not keep records of man-hours for any classes of employees. The number of workers for whom information is given in the present report is therefore smaller than the total number of workers (wage-earners and salaried employees) for whom statistics of employment, payrolls, average earnings, sex distribution, etc., are given in the monthly reports on employment and payrolls. These also include figures for certain industries not represented in the present report because relatively few of the wage-earners therein are paid on an hourly basis with the result that man-hour records are lacking. Such industries include public utility operation, trade, finance, insurance and real estate and some branches of transportation, storage and communication and service.

In manufacturing, the data relate to over 70 p.c. of all employees on the staffs of the firms co-operating in the monthly surveys of employment and payrolls; in 1956 the wage-earners for whom information on man-hours was obtained formed some 83 p.c. of the total number of hourly-rated and other wage-earners reported by practically all manufacturing establishments to the Annual Census of Manufactures. In mining and construction, data on man-hours and hourly earnings are provided for approximately 75 p.c. and 69 p.c. of the total employees of firms co-operating in the monthly surveys of employment and payrolls in those industries, respectively; in 1956, the monthly statistics were based on approximately 93 p.c. of the total number of wage-earners reported in the annual survey of the Mineral Statistics Section of the Industry and Merchandising Division.

Man-hours.—The man-hours statistics include hours worked by full-time and part-time wage-earners, including overtime hours actually worked; premium or penalty hours credited for purpose of computing overtime payment are not included. Hours

credited to wage-earners absent on leave with pay in the reported pay periods are included in the statistics as though the hours had been worked. The averages are obtained by dividing the aggregate hours reported for the week by the number of full-time and part-time wage-earners working such hours.

Wages.—The questionnaire calls for a statement of gross wages earned by the full-time and part-time wage-earners whose hours are reported, before deductions are made for taxes, unemployment insurance contributions, etc. Payments for overtime work, incentive or production and cost-of-living bonuses paid at regular intervals, and amounts credited to wage-earners on leave with pay in the reported pay periods are included. The value of board and lodging, which in some cases is part of the remuneration of workers, is not included. Bonuses paid at infrequent intervals and employers' contributions to welfare funds such as workmen's compensation, unemployment insurance, pension and medical plans and certain other employee benefits are also excluded.

So far as is possible the revised figures of average hourly and weekly earnings incorporate retroactive pay for one month as well as corrections in the material originally tabulated and data received too late for inclusion in the first tabulation; for the most part, such adjustments are not carried back for more than one month.

Pay Periods.—Statistics of man-hours and wages reported for periods exceeding one week in duration are reduced by the appropriate proportions to obtain the number of hours and the wages for one week in the stated pay period. Such data are combined with weekly figures furnished by employers whose records are maintained on a weekly basis, so that, in all cases, the tabulated statistics represent the situation in one week in each month.

Variations in Trends of average earnings result from many factors, such as changes in wage rates, in amounts of overtime work, short-time work, shift differentials, incentive or production bonuses and in the area, occupational and sex distributions of the reported working forces. Differences in industrial distributions, with related occupational and sex distributions, are the principal factors contributing to differences in the levels of earnings in particular areas.

Urban Area Statistics.—Statistics given in the present report for communities listed as "metropolitan areas" and "other major urban areas" in Tables 8 and 9 of the 1956 Census Volume 1 (Population) and in the same tables in Bulletin 1-6, cover the census areas, except those for St. Catharines, which also include establishments in Port Colborne and Welland. Statistics given for urban areas not listed in the above mentioned tables cover establishments in the incorporated cities and towns named but also include Iberville with St. Jean, Nitro with Valleyfield, and Preston with Galt.

Measuring the Purchasing Power of Earnings. — Changing consumer price levels affect the amounts of goods and services which a dollar will buy, and average earnings, of course, will be affected in the same way. An earnings measurement which takes the change of consumer prices into account, can be calculated by reducing actual earnings averages by the percentage amounts consumer price levels rise, or increasing them by the amount price levels fall. The adjusted averages may be used to indicate the comparative quantities of goods and services which could be purchased by average earnings if consumer price levels and consumption patterns had remained constant. The following illustration shows how this kind of an adjustment can be made.

Suppose that a series of weekly average wages rises from \$50.00 in week A to \$60.00 in week B, and that in the same interval a consumer price index advances from 100.0 to 110.0. Because of the 10 per cent rise in consumer prices, \$1.00 will not buy as much in week B as it would in week A. Likewise, a 20 per cent rise from \$50.00 to \$60.00 will overstate the increase which has occurred in the purchasing power of average weekly wages. This overstatement can be removed by reducing the figure of \$60.00 by the amount of the consumer price increase. The adjusted average is \$54.55 ($60.00/110.0 \times 100.0$), which may be referred to as a weekly wage average for week B expressed in the dollars of period A, or it may be said to indicate the level of real weekly wages relative to week A.

The foregoing calculation can be carried a step further to express in index number form the relationship between the week A average of \$50.00 and the week B figure of \$54.55. Taking the week A average of \$50.00 as equal to 100.0, the week B index becomes 109.0 ($54.55/50.00 \times 100.0$). Such an index may be called an index of weekly real wages. It indicates that average wages for week B will buy 9 per cent more goods and services than those received in week A, in spite of a 10 per cent rise in consumer prices. This 9 per cent increase in real wages compares with the rise of 20 per cent in money wages ($60.00/50.00 \times 100.0$).

It should be noted that while the estimates of average real wages may reflect the experiences of

broad groups of workers fairly well, their applicability to individual wage-earners depends upon a number of considerations. For example, individual earnings will differ significantly from the group average, depending upon occupation, industry, geographical location, or sex of the wage-earner. Moreover, individual spending habits differ widely, but the consumer price index which is used to adjust the earnings data refers only to the average consumption pattern of a particular income group. Group-spending patterns change over periods of time. To the extent that this occurs, the earnings data adjusted by the consumer price index (which has a "fixed" consumption pattern), will gradually be rendered less valid. Finally, some part of income may be saved, and it should be borne in mind that it is not appropriate to reduce savings to a constant dollar basis by using a price index which reflects consumption patterns.

It should also be kept in mind that measures of change in real earnings calculated from averages of gross' earnings may differ from changes in the purchasing power of "take-home" pay, due to such factors as changes in personal income tax, pay deductions for such things as social insurance and pension plans. Thus index numbers of real wages should not be interpreted as measuring fluctuations in the levels of consumption of wage-earners or wage-earners' families; they are intended to show only the trend in purchasing power of wages over the items covered by the price index, and in addition to the factors already mentioned, do not take into account other family income (including family allowances) or changes in the savings position of families.

In Table 9, 1949 figures are used as reference levels for indexes of both actual and real wages, since this is the year selected by the Dominion Bureau of Statistics for general post-war index number comparisons. However, the adjustment made in the forgoing illustration can be applied to any reference level, and it should not be inferred that the 1949 reference period has any special validity for earnings comparisons. Percentage change between any two periods will be the same regardless of the reference period selected.

FOOTNOTES

The following footnotes explain the content of various industrial classes listed in the detailed tables in this bulletin. In some industries, the group breakdown is less extensive than in the Standard

Industrial Classification; in these cases, figures for certain categories not shown are contained in the group totals.

- (a) Alluvial gold and auriferous quartz mining.
- (b) Copper-gold-silver; nickel-copper; silver-cobalt; silver-lead-zinc and miscellaneous metal mining.
- (c) Oil and natural gas; oil shale and bituminous sand; contract drilling and prospecting for oil.
- (d) Non-metal mining and quarrying; clay and sand pits.
- (e) Tires, tubes and other rubber products.
- (f) Leather gloves and mittens; leather tanneries and miscellaneous leather products.
- (g) Miscellaneous wood products.
- (h) Paper boxes and bags; roofing papers; miscellaneous paper products.
- (i) Household, office and store machinery; machine tools; machinery, n.e.s.
- (j) Machine tools; machinery, n.e.s.
- (k) Jewellery and silverware; white metal alloys; miscellaneous non-ferrous metal products.
- (l) Abrasives; asbestos; hydraulic cement; clay; glass; lime and gypsum; stone; concrete and miscellaneous non-metallic mineral products.
- (m) Building includes buildings and structures, special trade contractors. General engineering includes other construction, other than highways, bridges and streets.
- (n) Interurban bus and coach and urban and suburban transportation systems; taxi-cab and truck transportation; services incidental to transportation; other transportation.
- (o) Hotels and restaurants; laundries; dyeing, cleaning and pressing plants, and recreational services.
- (p) The Northwest Territories, with the exception of Baffin Island, are included in Alberta. Baffin Island is included in Quebec. The Yukon Territory is included in British Columbia.
- (..) Figures not available.

MAN-HOURS AND HOURLY EARNINGS - SEPTEMBER 1964
