EMPLOYMENT AND EARNINGS REPORTS

Following are other publications of the Labour Division based upon establishment data in the field of industrial employment, earnings and hours:

72-001 – Advance Statement on Employment and Weekly Earnings – Monthly – Price \$1.00 per year
(index numbers of employment and averages of weekly wage and salary statistics for Canada (major industrial divisions) and the provinces (industrial composite figures))

72-002 – Employment and Payrolls – Monthly – Price \$3.00 per year
(industry and area index numbers of employment and payrolls and averages of weekly wage and salary statistics; comparisons with earlier periods; charts and explanatory material)

72-003 – Man-Hours and Hourly Earnings – Monthly – Price \$3.00 per year
(industry and area averages of hours per week, hourly and weekly wages, with comparisons from a month and a year earlier, and certain historical comparisons; charts and explanatory material)

72-005 – Estimates of Labour Income – Monthly – Price \$2.00 per year
(monthly or quarterly estimates of wages, salaries and supplementary labour income, both unadjusted and seasonally adjusted, for specific industries and regions; with annual totals from 1953)

72-006 – Hiring and Separation Rates in Certain Industries – Semi-Annual – Price \$1.00 per year
(data for establishments having one or more employees covered by unemployment insurance and employing ten or more persons; also all units of chain or multiple firms, with at least one insured employee, regardless of number employed)

72-008 – Estimates of Employees by Province and Industry – Monthly – Price \$1.00 per year
(estimates of total numbers of employees, with comparisons with a month and a year earlier)

72-201 – Review of Employment and Payrolls – Annual – Price \$1.00
(industry and area index numbers of employment and payrolls and average weekly wages and salaries, monthly and annually, over a lengthy period; charts and explanatory material)

72-202 – Review of Man-Hours and Hourly Earnings – Annual – Price 75 cents
(industry and area averages of hours per week, hourly and weekly wages, monthly and annually, from 1945; charts and explanatory material)

72-203 – Earnings and Hours of Work in Manufacturing – Annual – Preliminary Report – Price 25 cents
(separate figures of earnings and hours for men and women and for wage-earners and salaried employees in one week in autumn for major manufacturing industries, Canada, and manufacturing in provinces and larger metropolitan areas)

72-204 – Earnings and Hours of Work in Manufacturing – Annual – Final Report – Price 75 cents
(separate figures of earnings and hours for men and women and for salaried employees and wage-earners in one week in autumn from 1946 with industrial and area detail; charts and explanatory material. Special data are obtained on a rotational basis in successive years)

72-502 – Labour Income, 1926-58 – Price 75 cents
(a complete record of annual estimates of labour income from 1926, along with monthly figures from 1947; contains explanations of sources, methods and concepts)

72-503 – Estimates of Employees by Province and Industry, 1961-64 – Price 50 cents
(estimates of total numbers of employees, monthly and annually, for major industrial divisions, Canada and provinces; contains a review of concepts, sources and methods and indicators of sampling variability)

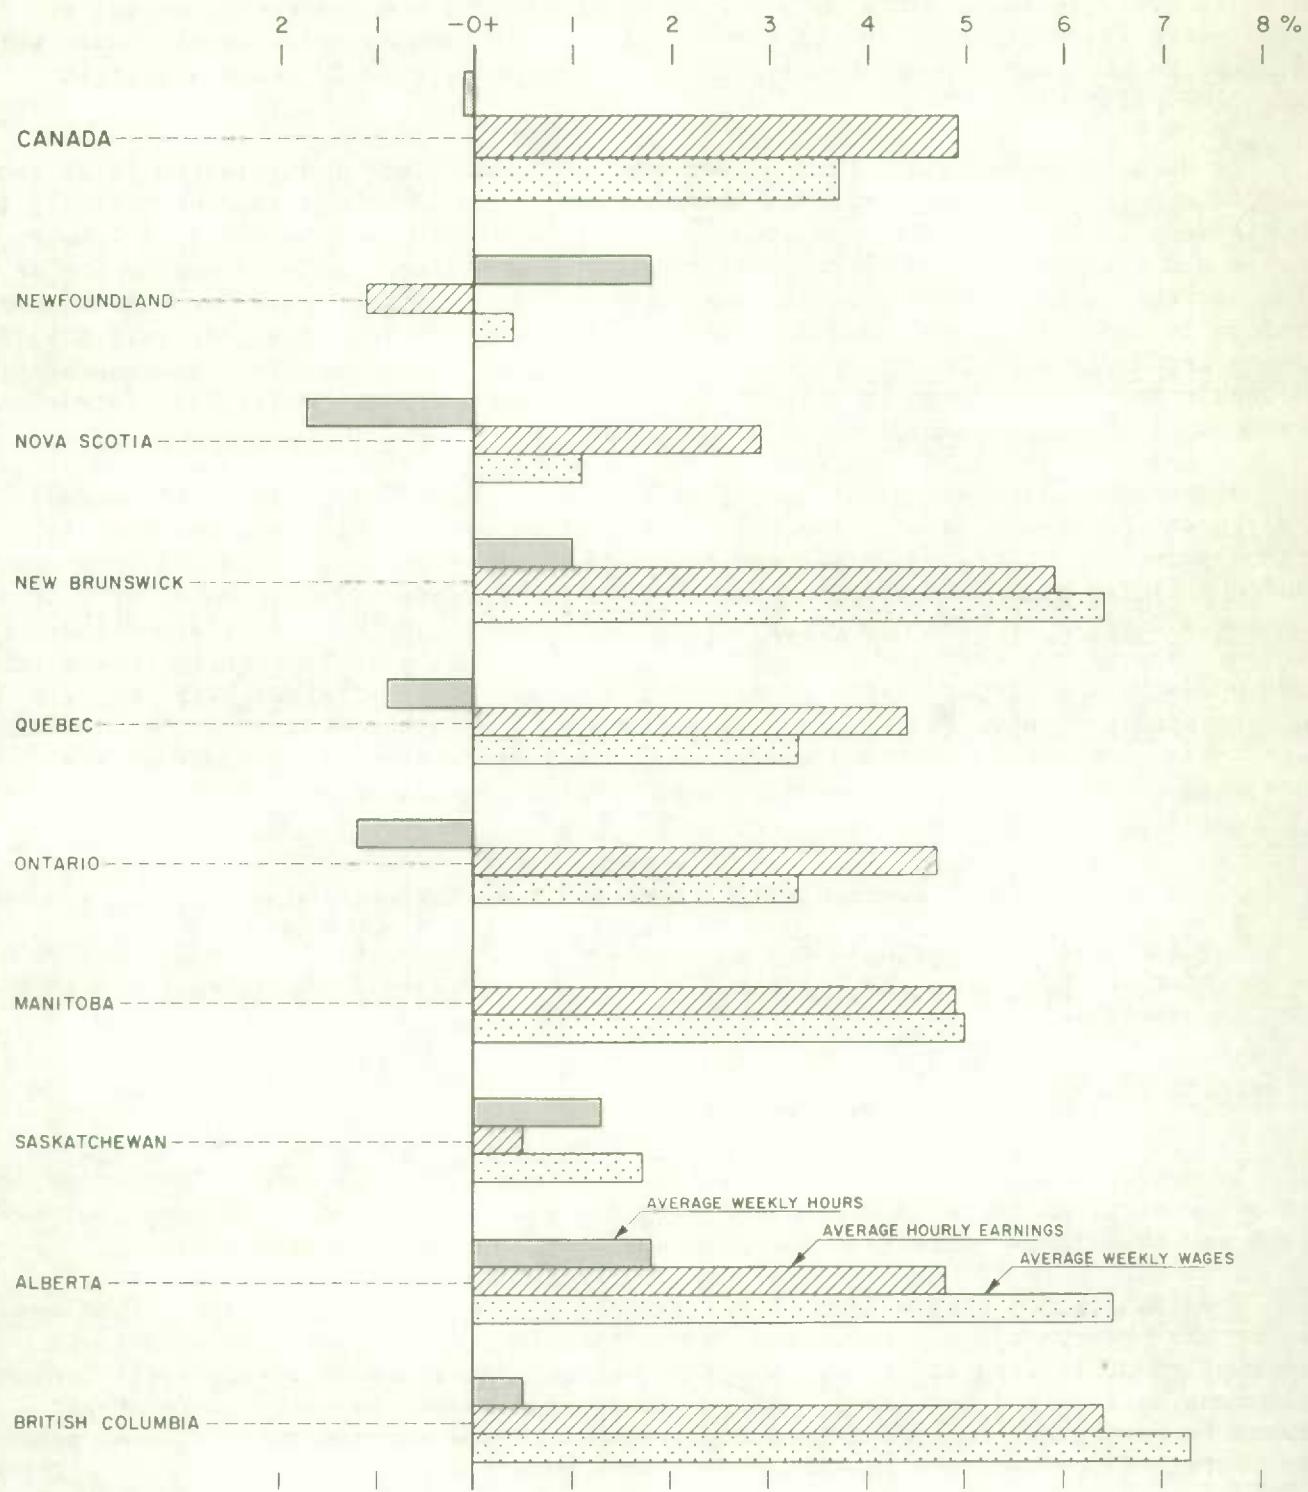

*Remittances should be in the form of cheque or money order,
made payable to the Receiver General of Canada and forwarded to
the Publications Distribution Unit, Financial Control Section,
Dominion Bureau of Statistics, or to the Queen's Printer, Ottawa,
Canada.*

PERCENTAGE CHANGES IN AVERAGE WEEKLY HOURS, AVERAGE HOURLY EARNINGS
AND AVERAGE WEEKLY WAGES OF HOURLY-RATED WAGE EARNERS
IN MANUFACTURING - CANADA AND PROVINCES

SEPTEMBER 1964 - SEPTEMBER 1965

MAN-HOURS AND HOURLY EARNINGS - SEPTEMBER 1965

Manufacturing

Average hourly earnings in manufacturing in September were \$2.13, a rise of 4 cents from the August level. The number of reported wage-earners increased by 0.9 per cent, average weekly hours were 0.2 hours longer and average weekly wages, at \$87.93, were \$1.92 higher. In the year-to-year comparison, average weekly hours were 0.4 hours shorter and average hourly and weekly earnings were 10 cents and \$3.16 higher, respectively.

In durable goods manufacturing, average hourly earnings increased to \$2.31 from \$2.27 in August. To a large extent, this was due to considerably greater activity in the higher-paid transportation equipment industry following settlement of a labour dispute and resumption of full production in motor vehicles. Reduced employment at below-average rates in wood products and non-metallic minerals, together with higher earnings in those industries and in iron and steel, and increased higher-paid activity in non-ferrous metals also contributed. Compared with September 1964, average hourly and weekly earnings were up by 8 cents and \$2.67, respectively, while the average work week was 0.4 hours shorter.

Average hourly earnings in non-durable goods manufacturing, at \$1.93, were 2 cents above the August level. The principal factors responsible were seasonal lay-offs of lower-paid workers, reinforced by some wage increases, in food and beverages, reduced activity at below-average rates in leather products, shorter hours of lower-paid employment in textiles and less activity in clothing, where rates are below-average. The effect of these factors was further strengthened by wage increases in paper products and higher levels of activity at above-average rates, together with some overtime payments, in printing and publishing and in chemical products. In the year-to-year comparison, average hourly earnings rose by 9 cents, average weekly hours dropped by 0.3 hours and average weekly wages were \$3.20 higher.

Non-Manufacturing Industries

The increase of 5 cents in average hourly earnings reported for construction was due, for the most part, to seasonal lay-offs of lower-paid employees and scattered overtime payments.

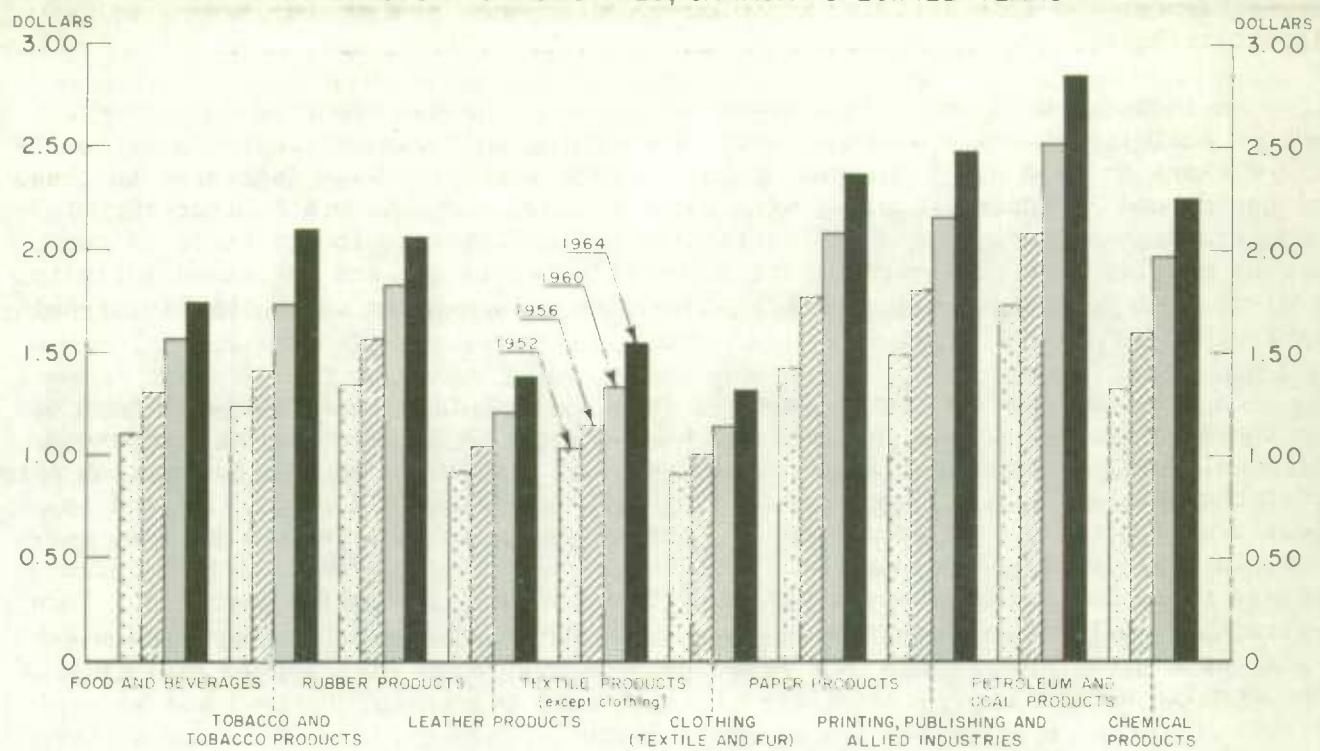

Manufacturing - Provinces

In Newfoundland, average hourly earnings decreased by one cent. Short-time in fish processing, where rates are below-average, tended to increase earnings, but this effect was outweighed by less higher-paid activity in pulp and paper mills.

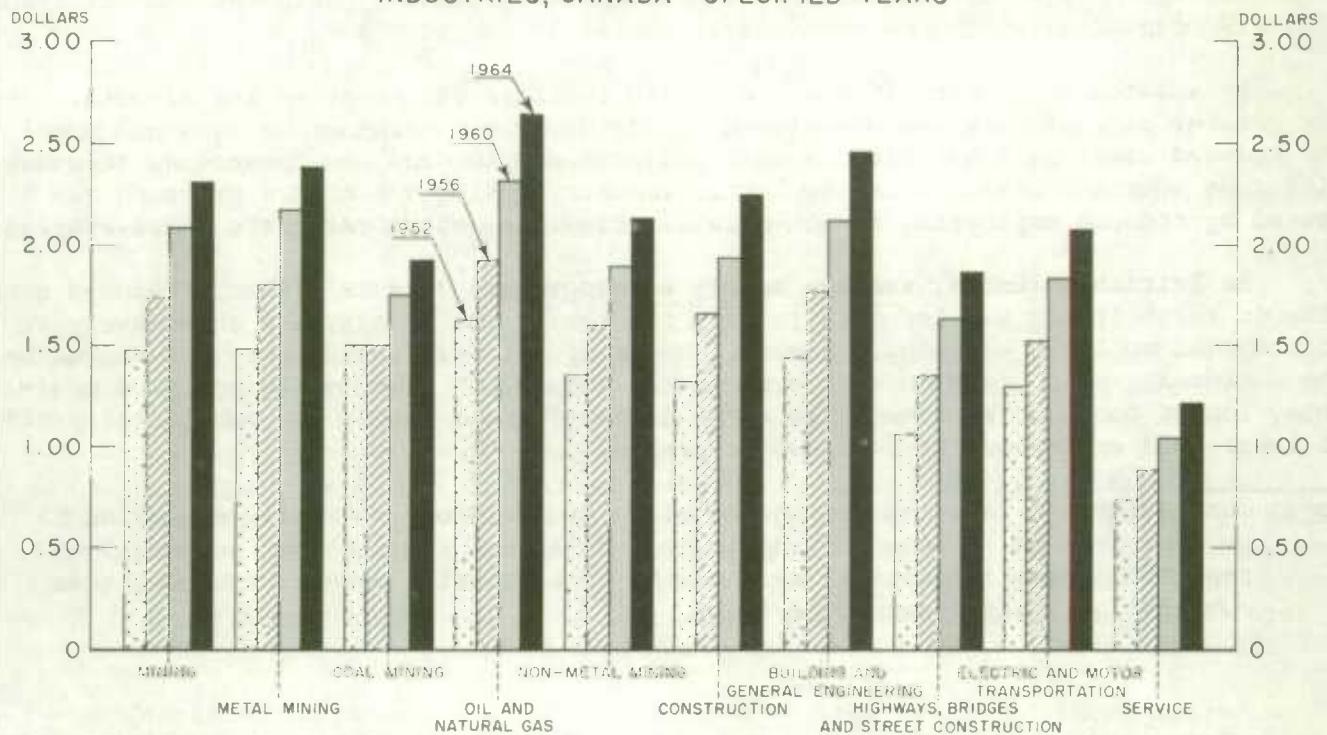

Nova Scotia reported a drop of one cent in average hourly earnings. This was due for the most part, to a reduction of overtime in transportation equipment and less employment in iron and steel, where prevailing rates are above-average. Reduced employment in food and beverages, caused mainly by seasonal lay-offs of lower-paid workers in fish processing, and less employment at below-average rates in wood products curtailed the decrease in earnings to some extent.

Average hourly earnings were 7 cents higher in New Brunswick. Seasonal lay-offs of lower-paid employees in food and beverages and wage increases, together with more activity at above-average rates, in pulp and paper mills, accounted for a con-

AVERAGE HOURLY EARNINGS OF HOURLY-RATED WAGE-EARNERS, NON-DURABLE
MANUFACTURING INDUSTRIES, CANADA - SPECIFIED YEARS

AVERAGE HOURLY EARNINGS OF HOURLY-RATED WAGE-EARNERS IN NON-MANUFACTURING
INDUSTRIES, CANADA - SPECIFIED YEARS

siderable part of the increase. Longer hours of higher-paid workers in transportation equipment and less activity at below-average rates in saw and planing mills also contributed.

An increase of 2 cents in average hourly earnings was reported for Quebec. Reduced activity at below-average rates in clothing and seasonal lay-offs of lower-paid workers in food and beverages, together with scattered wage increases in these industries and in paper products, were major expansionary factors. Other such factors were higher hourly earnings in printing and publishing, longer hours in non-ferrous metals, more employment in transportation equipment and increased activity in electrical apparatus, all of which industries report rates above the divisional average.

In Ontario, average hourly earnings rose by 4 cents. An appreciable part of the increase was due to the higher level of activity in transportation equipment which followed settlement of a labour dispute and resumption of full production after model change-over in motor vehicles. Overtime in printing and publishing and in chemicals, scattered wage increases in paper products and non-ferrous metals, seasonal lay-offs of lower-paid workers in wood products and shorter hours at below-average rates in clothing were other factors which tended to raise earnings. Some restraining influence was exerted by more activity in food and beverages and electrical apparatus, where rates are below-average, and fewer higher-paid employees in non-metallic minerals.

Manitoba reported an advance of one cent in average hourly earnings, due mainly to reduced activity in clothing, where rates are below-average, longer hours of higher-paid workers in meat products and higher hourly earnings in printing and publishing and in wood products. Reduced overtime in transportation equipment tended to minimize the increase.

Average hourly earnings were unchanged in Saskatchewan. This was the net result of small counter-balancing movements in a number of industries.

An advance of 3 cents in average hourly earnings was reported for Alberta. The greater part of this was occasioned by higher hourly earnings in iron and steel and reduced lower-paid activity in wood products and in food and beverages, together with some overtime payments in the latter industry. Slight contrary pressure was caused by reduced employment in non-metallic minerals, where rates are above-average.

In British Columbia, average hourly earnings were 3 cents higher. Reduced overtime in shipbuilding and lay-offs in iron and steel, where rates are above-average, contributed to lower earnings. However, their effect was considerably outweighed by the increasing pressure of overtime payments in pulp and paper mills and wood products, longer hours at above-average rates in non-ferrous metals and seasonal lay-offs of lower-paid employment in food and beverages.

Note: Statistics are based on returns received from employers usually employing 15 or more persons. These returns include data from the last pay period(s) of reporting establishments in each month. The latest figures throughout this publication are subject to revision.

TABLE 1. Average Hours and Average Earnings of Hourly-Rated Wage-Earners, Canada, by Industry

October									
November									
December									

(1) The averages at these dates were affected by loss of working time at the year-end holidays in the case of December, and by the Easter holidays in the case of April 1962 and March 1964. Monthly statistics are based on data for the last pay periods of reporting establishments in each month.

TABLE 5A. Average Hours and Earnings of Hourly-Rated Wage-Earners, Manufacturing, Provinces

Year and month	Newfoundland			Nova Scotia			New Brunswick

September	87.93	210.7	63.15	151.3

Notes: 1. The current weekly wages relate to the last pay periods in the month, while the Consumer Price Index relates to the beginning of the month. The current average of weekly wages for any month is therefore adjusted in the above table by the Consumer Price Index for the following month, as more representative of the period in which the wages are spent. A statement of uses and limitations of the adjusted figures appears on page ii.

2. For Consumer Price Index statistics, construction methods and component details, see monthly report "Prices and Price Indexes".

NOTES

General.—The monthly statistics of average hours, average hourly earnings and average weekly wages, like those of employment, payrolls and average weekly wages and salaries, are based on data from establishments usually employing 15 persons and over. The latest monthly figures are subject to revision.

Coverage.—Firms are asked to furnish information for the male and female wage-earners for whom they keep records of hours worked, so that the statistics relate, in the main, to hourly-rated wage-earners, or production workers, employed full time and part time. Casual workers are also included, provided that they work at least one day in the reported pay period. Data for salaried personnel are purposely excluded. In many cases, information is not available for certain classes of wage-earners, whose earnings, like those of most salaried employees, are not directly dependent on the number of hours worked; examples of wage-earners frequently excluded are route-drivers, piece-workers in many but not all establishments, truck men, etc. Numerous employers do not keep records of man-hours for any classes of employees. The number of workers for whom information is given in the present report is therefore smaller than the total number of workers (wage-earners and salaried employees) for whom statistics of employment, payrolls, average earnings, sex distribution, etc., are given in the monthly reports on employment and payrolls. These also include figures for certain industries not represented in the present report because relatively few of the wage-earners therein are paid on an hourly basis with the result that man-hour records are lacking. Such industries include public utility operation, trade, finance, insurance and real estate and some branches of transportation, storage and communication and service.

In manufacturing, the data relate to over 70 p.c. of all employees on the staffs of the firms co-operating in the monthly surveys of employment and payrolls; in 1956 the wage-earners for whom information on man-hours was obtained formed some 83 p.c. of the total number of hourly-rated and other wage-earners reported by practically all manufacturing establishments to the Annual Census of Manufactures. In mining and construction, data on man-hours and hourly earnings are provided for approximately 75 p.c. and 69 p.c. of the total employees of firms co-operating in the monthly surveys of employment and payrolls in those industries, respectively; in 1956, the monthly statistics were based on approximately 93 p.c. of the total number of wage-earners reported in the annual survey of the Mineral Statistics Section of the Industry and Merchandising Division.

Man-hours.—The man-hours statistics include hours worked by full-time and part-time wage-earners, including overtime hours actually worked; premium or penalty hours credited for purpose of computing overtime payment are not included. Hours

credited to wage-earners absent on leave with pay in the reported pay periods are included in the statistics as though the hours had been worked. The averages are obtained by dividing the aggregate hours reported for the week by the number of full-time and part-time wage-earners working such hours.

Wages.—The questionnaire calls for a statement of gross wages earned by the full-time and part-time wage-earners whose hours are reported, before deductions are made for taxes, unemployment insurance contributions, etc. Payments for overtime work, incentive or production and cost-of-living bonuses paid at regular intervals, and amounts credited to wage-earners on leave with pay in the reported pay periods are included. The value of board and lodging, which in some cases is part of the remuneration of workers, is not included. Bonuses paid at infrequent intervals and employers' contributions to welfare funds such as workmen's compensation, unemployment insurance, pension and medical plans and certain other employee benefits are also excluded.

So far as is possible the revised figures of average hourly and weekly earnings incorporate retroactive pay for one month as well as corrections in the material originally tabulated and data received too late for inclusion in the first tabulation; for the most part, such adjustments are not carried back for more than one month.

Pay Periods.—Statistics of man-hours and wages reported for periods exceeding one week in duration are reduced by the appropriate proportions to obtain the number of hours and the wages for one week in the stated pay period. Such data are combined with weekly figures furnished by employers whose records are maintained on a weekly basis, so that, in all cases, the tabulated statistics represent the situation in one week in each month.

Variations in Trends of average earnings result from many factors, such as changes in wage rates, in amounts of overtime work, short-time work, shift differentials, incentive or production bonuses and in the area, occupational and sex distributions of the reported working forces. Differences in industrial distributions, with related occupational and sex distributions, are the principal factors contributing to differences in the levels of earnings in particular areas.

Urban Area Statistics.—Statistics given in the present report for communities listed as "metropolitan areas" and "other major urban areas" in Tables 8 and 9 of the 1956 Census Volume 1 (Population) and in the same tables in Bulletin 1-6, cover the census areas, except those for St. Catharines, which also include establishments in Port Colborne and Welland. Statistics given for urban areas not listed in the above mentioned tables cover establishments in the incorporated cities and towns named but also include Iberville with St. Jean, Nitro with Valleyfield, and Preston with Galt.

Measuring the Purchasing Power of Earnings. — Changing consumer price levels affect the amounts of goods and services which a dollar will buy, and average earnings, of course, will be affected in the same way. An earnings measurement which takes the change of consumer prices into account, can be calculated by reducing actual earnings averages by the percentage amounts consumer price levels rise, or increasing them by the amount price levels fall. The adjusted averages may be used to indicate the comparative quantities of goods and services which could be purchased by average earnings if consumer price levels and consumption patterns had remained constant. The following illustration shows how this kind of an adjustment can be made.

Suppose that a series of weekly average wages rises from \$50.00 in week A to \$60.00 in week B, and that in the same interval a consumer price index advances from 100.0 to 110.0. Because of the 10 per cent rise in consumer prices, \$1.00 will not buy as much in week B as it would in week A. Likewise, a 20 per cent rise from \$50.00 to \$60.00 will overstate the increase which has occurred in the purchasing power of average weekly wages. This overstatement can be removed by reducing the figure of \$60.00 by the amount of the consumer price increase. The adjusted average is \$54.55 ($60.00/110.0 \times 100.0$), which may be referred to as a weekly wage average for week B expressed in the dollars of period A, or it may be said to indicate the level of real weekly wages relative to week A.

The foregoing calculation can be carried a step further to express in index number form the relationship between the week A average of \$50.00 and the week B figure of \$54.55. Taking the week A average of \$50.00 as equal to 100.0, the week B index becomes 109.0 ($54.55/50.00 \times 100.0$). Such an index may be called an index of weekly real wages. It indicates that average wages for week B will buy 9 per cent more goods and services than those received in week A, in spite of a 10 per cent rise in consumer prices. This 9 per cent increase in real wages compares with the rise of 20 per cent in money wages ($60.00/50.00 \times 100.0$).

It should be noted that while the estimates of average real wages may reflect the experiences of

broad groups of workers fairly well, their applicability to individual wage-earners depends upon a number of considerations. For example, individual earnings will differ significantly from the group average, depending upon occupation, industry, geographical location, or sex of the wage-earner. Moreover, individual spending habits differ widely, but the consumer price index which is used to adjust the earnings data refers only to the average consumption pattern of a particular income group. Group-spending patterns change over periods of time. To the extent that this occurs, the earnings data adjusted by the consumer price index (which has a "fixed" consumption pattern), will gradually be rendered less valid. Finally, some part of income may be saved, and it should be borne in mind that it is not appropriate to reduce savings to a constant dollar basis by using a price index which reflects consumption patterns.

It should also be kept in mind that measures of change in real earnings calculated from averages of gross earnings may differ from changes in the purchasing power of "take-home" pay, due to such factors as changes in personal income tax, pay deductions for such things as social insurance and pension plans. Thus index numbers of real wages should not be interpreted as measuring fluctuations in the levels of consumption of wage-earners or wage-earners' families; they are intended to show only the trend in purchasing power of wages over the items covered by the price index, and in addition to the factors already mentioned, do not take into account other family income (including family allowances) or changes in the savings position of families.

In Table 9, 1949 figures are used as reference levels for indexes of both actual and real wages, since this is the year selected by the Dominion Bureau of Statistics for general post-war index number comparisons. However, the adjustment made in the foregoing illustration can be applied to any reference level, and it should not be inferred that the 1949 reference period has any special validity for earnings comparisons. Percentage change between any two periods will be the same regardless of the reference period selected.

FOOTNOTES

The following footnotes explain the content of various industrial classes listed in the detailed tables in this bulletin. In some industries, the group breakdown is less extensive than in the Standard

Industrial Classification; in these cases, figures for certain categories not shown are contained in the group totals.

- (a) Alluvial gold and auriferous quartz mining.
- (b) Copper-gold-silver; nickel-copper; silver-cobalt; silver-lead-zinc and miscellaneous metal mining.
- (c) Oil and natural gas; oil shale and bituminous sand; contract drilling and prospecting for oil.
- (d) Non-metal mining and quarrying; clay and sand pits.
- (e) Tires, tubes and other rubber products.
- (f) Leather gloves and mittens; leather tanneries and miscellaneous leather products.
- (g) Miscellaneous wood products.
- (h) Paper boxes and bags; roofing papers; miscellaneous paper products.
- (i) Household, office and store machinery; machine tools; machinery, n.e.s.
- (j) Machine tools; machinery, n.e.s.
- (k) Jewellery and silverware; white metal alloys; miscellaneous non-ferrous metal products.
- (l) Abrasives; asbestos; hydraulic cement; clay; glass; lime and gypsum; stone; concrete and miscellaneous non-metallic mineral products.
- (m) Building includes buildings and structures, special trade contractors. General engineering includes other construction, other than highways, bridges and streets.
- (n) Interurban bus and coach and urban and suburban transportation systems; taxi-cab and truck transportation; services incidental to transportation; other transportation.
- (o) Hotels and restaurants; laundries; dyeing, cleaning and pressing plants, and recreational services.
- (p) The Northwest Territories, with the exception of Baffin Island, are included in Alberta. Baffin Island is included in Quebec. The Yukon Territory is included in British Columbia.
- (..) Figures not available.

MAN-HOURS AND HOURLY EARNINGS - SEPTEMBER 1965
