MAN-HOURS AND HOURLY EARNINGS
WITH AVERAGE WEEKLY WAGES

OCTOBER 1969

Published by Authority of
The Minister of Industry, Trade and Commerce

December 1969
8003-502

Price: 40 cents
\$4.00 a year

Vol. 25—No. 10

EMPLOYMENT AND PAYROLL REPORTS

Following are publications of the Labour Division based upon establishment data in the field of industrial employment, payrolls and hours:

- 72-001 - Advance Statement on Employment and Average Weekly Wages and Salaries - Monthly - Price \$1.00 per year
(Index numbers of employment and averages of weekly wage and salary statistics for Canada (major industry divisions) and the provinces (industrial composite figures)).
- 72-002 - Employment and Average Weekly Wages and Salaries - Monthly - Price \$4.00 per year
(Industry and area index numbers of employment and payrolls and averages of weekly wage and salary statistics; comparisons with earlier periods; charts and explanatory material).
- 72-003 - Man-Hours and Hourly Earnings - Monthly - Price \$4.00 per year
(Industry and area averages of hours per week, hourly and weekly wages, with comparisons from a month and a year earlier, and certain historical comparisons; charts and explanatory material).
- 72-005 - Estimates of Labour Income - Monthly - Price \$2.00 per year
(Monthly estimates of wages, salaries and supplementary labour income, both unadjusted and seasonally adjusted, for specific industries and regions; with annual totals from 1954).
- 72-008 - Estimates of Employees by Province and Industry - Monthly - Price \$2.00 per year
(Estimates of total numbers of employees, with comparisons with a month and a year earlier).
- 72-201 - Review of Employment and Average Weekly Wages and Salaries - Annual - Price \$2.00
(Industry and area index numbers of employment and payrolls and average weekly wages and salaries, monthly and annually, over a lengthy period; charts and explanatory material).
- 72-202 - Review of Man-Hours and Hourly Earnings - Annual - Price \$2.00
(Industry and area averages of hours per week, hourly and weekly wages, monthly and annually, over a lengthy period; charts and explanatory material).
- 72-204 - Earnings and Hours of Work in Manufacturing - Annual - Final Report - Price 75 cents
(Separate figures of earnings and hours for men and women and for salaried employees and wage-earners in one week in October from 1946 with industrial and area detail; charts and explanatory material. Special data are obtained on a rotational basis in successive years).
- 72-502 - Labour Income, 1926-58 - Price 75 cents
(A complete record of annual estimates of labour income from 1926, along with monthly figures from 1947; contains explanations of sources, methods and concepts).
- 72-503 - Estimates of Employees by Province and Industry, 1961-64 - Price 50 cents
(Estimates of total numbers of employees, monthly and annually, for major industrial divisions, Canada and provinces; contains a review of concepts, sources and methods and indicators of sampling variability).
- 72-504 - Employment Indexes, Average Weekly Wages and Salaries, Average Weekly Hours and Average Hourly Earnings, Monthly and Annual Statistics -- Historical Series, January 1961 - May 1965
-- Volume I - Price \$4.50
(This volume gives statistics revised to the 1960 Standard Industrial Classification and a 1961 time base for index numbers).

Remittances should be in the form of cheque or money order, made payable to the Receiver General of Canada and forwarded to the Publications Distribution Unit, Financial Control Section, Dominion Bureau of Statistics, or to the Queen's Printer, Ottawa, Canada.

AND AVERAGE WEEKLY WAGES OF HOURLY-RATED WAGE EARNERS
IN MANUFACTURING — CANADA AND PROVINCES

SEPTEMBER 1968 — SEPTEMBER 1969

MAN-HOURS AND HOURLY EARNINGS

OCTOBER 1969

Advance estimates show that average weekly wages in manufacturing in October rose slightly from September as an increase in average hourly earnings more than offset a decline in average weekly hours. In mining, average weekly wages increased as both average hourly earnings and average weekly hours were higher than in September. Average weekly wages in construction fell as increases in average hourly earnings in both components were offset by declines in average weekly hours.

Further industry and area detail for the month of October, other than that presented in the accompanying table, is not yet available.

Industry division and area	Average weekly hours			Average hourly earnings			Average weekly wages		
	Oct. 1969	Sept. 1969	Oct. 1968	Oct. 1969	Sept. 1969	Oct. 1968	Oct. 1969	Sept. 1969	Oct. 1968

SEPTEMBER 1969

Summary

Average weekly wages in manufacturing at \$114.70 in September were \$3.33 higher than in August as a result of a 0.6 hour increase in average weekly hours and a 4-cent rise in average hourly earnings. The largest changes occurred in the durable goods industries, with transportation equipment recording a 6-cent increase in average hourly earnings and a 1.5 hour increase in average weekly hours. Average weekly hours in primary metal rose 1.9 hours following short-time in August. In non-durables, average hourly earnings increased 3 cents and average weekly hours were 0.2 hours higher than in August. Compared to September 1968, average weekly hours in manufacturing were 0.3 hours lower and average hourly earnings were 20 cents higher.

In mining, average weekly wages rose by \$1.48 from \$133.49 in August to \$134.97 in September as average weekly hours increased 0.5 hours. Average hourly earnings were unchanged. Compared with September 1968 data, average weekly hours were 0.2 hours lower and average hourly earnings were 12 cents higher.

Average weekly wages in the construction industry at \$158.42 in September were \$3.93 higher than in August. Average hourly earnings rose 8 cents; average weekly hours showed little change. Both the building and engineering components recorded increases in average hourly earnings (8 cents and 4 cents, respectively). A 1.0 hour decline in average weekly hours in engineering was offset by a 0.4 hour increase in building. In the year-over-year comparison, average weekly hours in construction were 0.9 hours lower and average hourly earnings were 42 cents higher.

The footnotes to the tables on page 7 indicate some of the main factors underlying the larger variations in average weekly hours and average hourly earnings.

(1) Relatively few employees in this region. (2) Less overtime worked. (3) Increased overtime, especially in copper, gold and silver mines - some short-time last month. (4) Increased activity in non-metal mining. (5) Short-time last month associated with an industrial dispute in iron and steel mills which affected part of the reference week. (6) Less overtime worked in shipbuilding and repairing. (7) Increased production, overtime in motor vehicles and aircraft and parts. (8) Mainly in general building contractors. (9) Mainly in highways, bridges and streets.

Engineering	4	2	4	4	5	29(11)

(1) Relatively few employees in this region. (2) Fewer hours worked in a component where wages are below the mining average. (3) Mainly in saw, shingle and planing mills. (4) Bonuses. (5) Heavy overtime payments in motor vehicles; also in aircraft and parts. (6) Overtime payments in communications equipment. (7) Seasonal layoffs in cannning, where wages are lower than the food and beverages average. (8) Overtime payments in pulp and paper mills. (9) Mainly in general contractors, wage increases, bonuses and some overtime payments. (10) Mainly in general contractors. (11) Large drop in hours worked in highways, bridges and streets, where wages are lower than the engineering average. Some wage increases in other engineering.

Note: Statistics are based on returns received from employers having 20 or more employees in any month of the year. These returns include data for the last pay period(s) of reporting establishments. The latest figures throughout this publication are subject to revision.

Notes: 1. The current weekly wages relate to the last pay periods in the month, while the Consumer Price Index relates to the beginning of the month. The current average of weekly wages for any month is therefore adjusted in the above table by the Consumer Price Index for the following month, as more representative of the period in which wages are spent. A statement of uses and limitations of the adjusted figures appears in the notes.

2. For Consumer Price Index statistics, construction methods and component details, see monthly report "Prices and Price Indexes".

NOTES

Each month the Employment Section collects from its reporting units data on the number of paid employees and their payrolls, on the number of wage-earners for whom a record of hours is kept and their hours and earnings, and on the number of female employees. The data on total numbers of employees, their average weekly wages and salaries and on female employees are released in a monthly report "Employment and Average Weekly Wages and Salaries", Catalogue No. 72-002. The data relate to a reference period, conceptually the last seven days of the month. In a monthly tabulation, data are grouped into industry and area units.

The Reporting Unit

The reporting unit is the establishment, that is, the smallest industrial unit which is a separate operating entity capable of reporting all elements of basic industrial statistics including information on inputs and outputs needed to calculate "value added" or "gross mark-up" or "gross profit" as well as the related data on employment and payrolls. For purposes of urban area statistics, the Employment Section may request separate reports from parts of an establishment located in different urban centres.

Monthly reports are requested from establishments in the following industrial divisions: forestry; mining, including milling; manufacturing; construction; transportation, communication and other utilities; trade; finance, insurance and real estate; and service. The Employment Section does not have wage-earner data for all these divisions. In some industries there are relatively few wage-earners. In others the earnings are not related to their hours as is the case of monthly paid wage-earners or employers who do not keep a record of man-hours. For these reasons data on wage-earners are currently available for mining, manufacturing, construction and for the following industries in other divisions: urban transit, highway and bridge maintenance, laundries, cleaners and pressers and hotels, restaurants and taverns.

The survey covers larger firms, that is, firms having 20 or more employees in any month of the year. Thus all the establishments of a firm that had 20 or more employees, in total, in any month of the year would be included even though any particular establishment had only a few employees. This size criteria results in approximately the same coverage as did the "usually employing 15 or more" concept that was formerly used.

It is important to emphasize that the statistics in the report do not represent estimates of total numbers of wage-earners in specified industries or areas, but show only certain wage-earners on the staffs of co-operating employers in the reference period. In manufacturing the number of hourly-rated wage-earners on the average in 1967 was 68.6 per cent of all manufacturing employees reported in the Employment Section's survey. In mining the hourly-paid wage-earners represented 68.2 p.c. of reported employment and in construction 80.0 p.c.

Definitions

Reference Period

The figures refer to the last seven days in the specified months. In practice, few establishments keep payroll records covering precisely this period and establishments are therefore permitted to report for their last pay period or pay periods in each month.

When the reported pay period is longer than one week, the payroll data are reduced to one week's proportion of the totals. The numerators of the fractions used in calculating these weekly equivalents are 5, 6 or 7 depending on the number of days per week in which the establishment operated in the pay period. The denominators of the fractions are the number of working days in the different pay periods. When a holiday, lay-off or industrial dispute occurs in an establishment that reports a pay period other than the last week of the month an adjustment is made to the data if the holiday, lay-off or dispute affects the two periods differently.

Wage-earners

The survey covers the wage-earners of the reporting establishments for whom a record of hours is kept except for casuals working less than the equivalent of one day a week and wage-earners paid at a monthly rate. Regular part-time wage-earners are included as are certain workers whose earnings are not solely based on hours worked such as piece-workers in establishments that keep a record of hours.

Wage-earners are defined as those employees engaged in actual production and related operations, including working foremen doing work similar to that of the employees they supervise. Also included are maintenance, warehouse and delivery staffs, routemen, driver-salesmen, sales clerks in retail stores, waitresses, etc.

Wage-earners not receiving pay for anytime during the reference period are excluded. For example, workers on strike during the reported pay period, or laid off as a consequence of a strike, are not included in the data unless they work part of the week or they draw pay from their employers (e.g. vacation pay). The exclusion of persons affected by industrial dispute is one of the main sources of irregular fluctuations in the series.

Man-hours

The man-hours statistics include hours worked by full-time and part-time wage-earners, including overtime hours actually worked. Premium or penalty hours credited for purposes of computing overtime payments are excluded. Hours credited to wage-earners absent on leave with pay in the reported pay periods are included in the statistics as though the hours had been worked.

Wages

The wages of reported wage-earners are covered. These are gross payments before deductions are made for taxes, unemployment insurance, etc. Included are straight-time wages, over-time wages, cost-of-living allowances, payments to persons absent because of holidays, vacations, sickness, etc., and regularly paid incentive, production and shift bonuses.

The wages concept does not include supplementary labour costs, operational costs or payments not related to the reference period. Thus the data do not include such items as employer's contributions to unemployment insurance, medical plans, workmen's compensation, or other welfare plans, the value of room and board, compensation in kind, travelling expenses, retirement gratuities, or bonuses paid at irregular or infrequent intervals. The treatment of vacation stamps is an exception. Although payment of vacation stamps does not relate to the reference period, these payments are included in the wages data and the employees are considered to be absent without pay during the period they are on vacation.

Organization of Data

The Tabulation

Data tabulated each month show the numbers of wage-earners, their hours and their wages for the current and preceding month. The statistics first published for each month are preliminary; re-tabulation of the data in the succeeding month permits incorporation of corrections, retroactive pay for one month and data received too late for inclusion in the first tabulation. Data tabulated but not published are available on request provided the secrecy requirements of the Statistics Act are met.

The data are classified by industrial and geographic units and various averages and aggregates are calculated.

Industrial Classification

All reporting establishments are assigned to an industrial class on the basis of their principal activity. If an establishment is engaged in a number of different industrial activities, its principal activity is determined by the net value added by these activities or, where this is not possible, by the gross revenue obtained from the different activities. When an establishment has very mixed activities, it is not necessarily shifted from industry to industry each time its principal activity changes.

A description of the various industries and groups of industries may be found in the "Standard Industrial Classification Manual", DBS Catalogue No. 12-501. The "S.I.C. code" columns in the main tables refer to this manual. The tables contain a few classes not found in the S.I.C. These include:

Durable-goods manufacturing - The sum of wood products, furniture and fixtures, primary metal industries, metal fabricating industries, machinery (except electrical), transportation equipment, electrical products, and non-metallic mineral products.

Non-durable goods manufacturing - The sum of the remaining manufacturing industries.

Building - The sum of general contractors and special trade contractors.

Engineering - The sum of highways, bridges and streets and other construction.

As well, the tables subdivide the synthetic textile industry into filament yarn and staple fibres and spun yarn and fabrics.

Geographic Classification

Reporting establishments are assigned to a province and, where applicable, to an urban area. Newfoundland, Prince Edward Island, Nova Scotia and New Brunswick are added together in some tables to give a figure for the Atlantic Region. Similarly, Manitoba, Saskatchewan and Alberta are added together to give a figure for the Prairie Region. Establishments in the Yukon and Northwest Territories are excluded from provincial totals but are included in the Canada totals. For urban areas the Census of Population's "Metropolitan Area" definitions were used for the seventeen urban areas where they apply. The definitions used for other urban areas are based on a labour market concept; the areas usually include a main centre and surrounding territory. A list showing the territory included in each tabulated urban area is available from the Employment Section on request.

An establishment not located in a tabulated urban area or an establishment that has no fixed location such as certain construction establishments is included in the provincial totals but is not assigned to an urban centre.

Averages

The average weekly hours figure is obtained by dividing total weekly man-hours by the total number of wage-earners who worked those hours. Average hourly earnings are obtained by dividing total weekly wages by total weekly hours. Average weekly wages are obtained by dividing total weekly wages by the total number of wage-earners. It should be noted that total hours include overtime hours actually worked and that the wage-earner total includes part-time wage-earners and casuals working more than the equivalent of one day a week. Annual statistics are calculated from the aggregate of the monthly data, not from monthly averages.

Measuring the Purchasing Power of Earnings

Changing consumer price levels affect the amounts of goods and services which a dollar will buy, and average earnings, of course, will be affected in the same way. An earnings measurement which takes the change of consumer prices into account can be calculated by reducing actual earnings averages by the percentage amounts consumer price levels rise, or increasing them by the amount price levels fall. The adjusted averages may be used to indicate the comparative quantities of goods and services which could be purchased by average earnings if consumer price levels and consumption patterns had remained constant. The following illustration shows how this kind of an adjustment can be made.

Suppose that a series of average weekly wages rises from \$80.00 in week A to \$100.00 in week B, and that in the same interval a consumer price index advances from 100.0 to 110.0. Because of the 10 per cent rise in consumer prices, \$1.00 will not buy as much in week B as it would in week A. Likewise, a 25 per cent rise from \$80.00 to \$100.00 will overstate the increase which has occurred in the purchasing power of average weekly wages. This overstatement can be removed by reducing the figure of \$100.00 by the amount of the consumer price increase. The adjusted average is \$90.91 ($100.00 / (110.0 \times 100.0)$), which may be referred to as a weekly wage average for week B expressed in the dollars of period A, or it may be said to indicate the level of real weekly wages relative to week A.

The foregoing calculation can be carried a step further to express in index number form the relationship between the week A average of \$80.00 and the week B figure of \$90.91. Taking the week A average of \$80.00 as equal to 100.0, the week B index becomes 113.6 ($90.91 / 80.00 \times 100.0$). Such an index may be called an index of weekly real wages. It indicates that average wages for week B will buy 13.6 per cent more goods and services than those received in week A, in spite of a 10 per cent rise in consumer prices. This 13.6 per cent increase in real wages compares with the rise of 25 per cent in money wages ($100.00 / 80.00 \times 100.0$).

It should be noted that while the estimates of average real wages may reflect the experiences of broad groups of workers fairly well, their applicability to individual wage-earners depends upon a number of considerations. For example, individual earnings will differ significantly from the group average, depending upon occupation, industry, geographical location, or sex of the wage-earner. Moreover, individual spending habits differ widely, but the consumer price index which is used to adjust the earnings data refers only to the average consumption pattern of a particular income group. Group-spending patterns change over periods of time. To the extent that this occurs, the earnings data adjusted by the consumer price index (which has a "fixed" consumption pattern), will gradually be rendered less valid. Finally, some part of income may be saved, and it should be borne in mind that it is not appropriate to reduce savings to a constant dollar basis by using an index which reflects consumption patterns.

It should also be kept in mind that measures of change in real earnings calculated from averages of gross earnings may differ from changes in the purchasing power of "take-home" pay, due to such factors as changes in personal income tax, pay deductions for such things as social insurance and pension plans. Thus index numbers of real wages should not be interpreted as measuring fluctuations in the levels of consumption of wage-earners or wage-earners' families; they are intended to show only the trend in purchasing power of wages over the items covered by the price index, and in addition to the factors already mentioned, do not take into account other family income (including family allowances) or changes in the savings position of families.

The table in this report showing indexes of both actual and real wages uses 1961 as a reference year. However, the adjustment made in the foregoing illustration can be applied to any reference level; percentage change between any two periods will be the same regardless of the reference period selected.
