## CHART

Average Kourly Earnings in Loading Manufacturing Estriblishments and in the Durable and the Non-Durable Manufactured Goods Division

## EXPLANATION OF THE TERMS USED IN THIS REPORT.

Wage-Earners.- Leading employers are asked to furnish monthly statistics on man hours on behalf of those wagevearners for whom they keep a record of aggregate hours worked, so that the data relate, in the main, to persons employed at hourly rates. Information for salaried employees is purposely excluded, while in many cases, statistics of man-hours are not available for certain classes of wagevarners, whose earnings, like those of most salaried employees, a re not directly dependent upon the number of hours worked; examplos of wage-earners frequently excluded are route drivers, pieceworkers in many but not all establishments, truck men, etc。 In addition, some employers do not keep a record of manohours for any classes of omployees. Accordingly the number of workers for whom statistics are given in the present bullotin is smaller than the total number of employees (salaried personnel and wage earners), for whom statistics of employment and payrolls are obtained in the monthly surveys on these subjects: the results of these surveys are published in the monthly bulletins on employment and payrolls, which also contain data relating to the sex distribution of the workers in recorded employment, an important factor contributing to differences shown in the average earnings in various industries.

The monthly statistics of average hours and average hourly eamings, like those of employment and average weokly earnings relate, in the main, to establishments usually employing 15 persons and over, the smaller firms being excluded for reasons of economy in terms of cost and time. In the case of the manufacturing industries. (largely represented in the material of the present bulletin), the statistics relate to over 75 poce of all persons reportad in the monthly surveys of employment and payrolls. The factories furnishing monthly data on manohours and hourly aarnings in 1946 employed over 81 poc. of the total wageoarners reported by all manufacturing establishments in the same year, including wageoarners paid by the hour and those employed on other terms.

In mining and construction, data on hours and earnings are currently available for some 85 poce and 83 poco, of the total employees reported to the monthly surveys of employment and payrolls in those industries, respectively; at June 1, 1941, the cooperating mine operators had empluyed over 96 poco of all wage-earners at work as enumerated in the Census, while the employers in construction whose statistics were then received had reported over 79 poco of the Census total of employees at work in that group. It should be noted that the comparisons with the Census figures are complicated by differences in the classifications used in compiling the two series, so that the percentages of coverage are only approximate.

Man-Hours.- The statistics of manohours include overtime as we 11 as the hours worked by part-time and casual workers. Hours credited to persons absent on leave with pay in the recorded pay period are inciuded in the statistics as though the hours for which payment was made had been worked.

Wages.- The wages reported represent gross earnings before deductions are made for taxes, unemployment insurance, etco; they do not, however, include the value of board and lodging which in some cases is part of the remuneration of workers. Incentive and production bonuses and overtime payments are included, as are sums paid employees absent on leave with pay during the pay period for which statistics are given. The figures of average weokly wages result from the multiplication of the average hours worked during the period of observation, by the avorace hourly eamings reported in the same period.

Pay Periodso - Statistics of man-hours and hourly wages reported for periods bxoceting one woek in duration are reduced by the appropriate proportions to obtain for tabulation purposes the number of hours worked and the hourly earnings in one weok in the indicated pay period; such information is then added to the data furnishad by employers who pay on a weekly basis. so that, in all cases, the tabulated data represent the situation in one week in each month.

## STATISTICS OF MAN-HOURS. HOURLY EARNINGS AND WEEKLY WAGES AS RIPORTED BY LEADING EMPIOYLRS AT JULY 1. 1950。

1. Manufacturing.

The number of wageearners on the staffs of the coooperating manufacturing establishments incroased by 1.8 poco at July 1 as compared with Jure 10 This advance was accompanied by a rise of 3.3 poc. in the ageregate hours worked; the observance of the Victoria Day holiday in the week of june 1 had caused a drop in the number of hours reported at that date. There was an increase of three-fifths of an hour in the average working time in manufacturing at July 1 as compared with June 1.

The aggregate weekly wages pald by the firme furnishing data were $3 . \epsilon$ poc. higher at July 1 than one month earlier. This increase was partly the result of the longer working hours and partly a result of the increase in the number of wage-aarners in manufacturing; at the same time, upward revisions of wage rates were reported in some industries. The average hourly ermings increased by two-fifths of a cent in the month. The average weekly wages, at $\$ 44.26$, were 79 cents above the June 1 figuro.

Durable Goods Industries. ~ The number of wagearners reported by factories manufacturing durable goods increased by l.7 poc. in the period under review. Their aggregate hours rose by $3.2 p_{0} c_{0}$ and the average working week of their employees was seven-tenths of an hour longer than in the week of June $\mathrm{l}_{\mathrm{o}}$. The avarage hours worked were longer in all industries in the group $y$ ith the exception of non-ferrous metals.

Incrases in the aggragats maekly wages wort indboted in all industrioe in the group; the total reported in heavy manurectured goods plants advanced by 3.8 poce at July 1 as compared with June 1 . The most substential gains were made in lumber products and non-ferrous metals, in both of which wage revisions were reported. The average hourly earnings in the durable goods industries taken as a unit increased by 0.5 cents, to reach a maximum of 112.0 cents. The indicated weekly wages averaged $\$ 48.05$, as compared with $\$ 47.01$ at June 1.

Non-Durable Goods Industries.- In factories manufacturing non-durable goods, the indicated number of wage-eamers was 1.9 poc. above the June 1 figure. This increase was accompanied by a rise of 3.3 poc. in the aggregate hours worked, and 3.4 poc. in the aggregate wages. The average working time in these industries was half an hour longer for the week of July 1 , and the average hourly earnings onetenth of a cent greater than at June $I_{0}$ of the 14 main industries making up the group, 5 showed an increase in the average hourly earnings; these classes were pulp and paper mills, papar products, rubber, tobacco and miscellaneous manufactured products. In the non-durable goods division, the general average of weekly wages rose from $\$ 39.52$ at June 1 to $\$ 40.34$ at July 1.

## 2. NoncManufacturing Industries,

Miningo- Increased activity in cos l mining was noted in the period under review. The number of wageoarners on the staffs of the co-operating companios rose by $l_{0} S p_{0} .0$ and their aggregate hours morked in the week of July $l$ were 13.0 poc. zoove the figure of Juno 1 , a slack period. The morking hours reported

NOTE: THE MOST RECENT STATISTICS THROUGHOUT THIS BULLETIN ARE SUBJECT TO REVISION.

in coal mining averaged 402 hours longer than the week of June 1，when short time was worked，but the average hourly earnings were l． 2 cents lower，due to a change in the geographiagl distribution of hours worked．The general average of weekly wages incrased by 5 dollars，to reach $\$ 50.81$ at July 1 。

Wageearners engaged in the extraction of metallic ores worked an average of 44.5 hours in the week of July 1 ．or three－fifths of an hour less than in the week of June l．During the same period，the average hourly earnings wore sevenotenths of a cent abovs the June 1 figure，standing at 120.4 cents，the maximum on record． The reported number of wageaarners in the industry increased by 1 p．ce at July 1，while their weekly wages were 40 cents below those for the week of June 1 ．

In the nonwetallis mining group，the nuraber of wegemearners increased by 5 per cent；this advance was accompanied by gains of 6.8 poc．in the aggregate hours and the aggregate eamings reported．Heightened activity in the westem peat boga was responsible for much of the change．The averuge working week in non－ metallic mining at July 1 was sevenetenths of an hour longer than at June 10 The average hourly earnings were unchanged，at 109.7 cents，but the average weekly wages were 77 cents above the June 1 figure。

Construction $=$ Activity in building and highway construction continued seasonally to expand at July 1 。 As compared with one month earlier，there was an increase of $7.8 \mathrm{p}, \mathrm{c}$ ．in the number of wage－earners reported in buliding construction， and of 9 poc．in highway construction．These advences were accompanied by increases of 10.9 poco and 13.3 p．co，respectively，in the aggregate hours worked in these industries．In building construction，the weekly disbursements were 10.5 poc．above the June 1 figuren and there was an increase of 12.9 p．c．in the wages reported in highway construction．

The average hours worked in building construction in the week of July 1 were l．I hours above the June ifigure，while the average hourly earnings were one－fifth of a cent below the preceding average。A similar comparison in highway construction showed an increase of 1.6 hours in the working time，and a decline of three－tenths of a cent in the average hourly earnings o

$$
\text { 3. Provincia } 1^{1 / S t a t i s t i c s ~ f o r ~ L o a d i n g ~ I n d u s t r i o s . ~}
$$

The average working weok in manufacturing plants was longer in the wook of July $l$ in a majority of provinces，the exception being Saskatchewan；at June 1 ， the average hours worked had been belowaverage，due to the observance of the Victorta Day holiday．The most substantial increase in working time was that of 1.2 hours in New Brunswick，overtime and seasonal activity in some industries accounting for part of the gain．In Manitoba，the average hours worked were $l_{0} l$ hours longer than at June 1，with greater activity in motopacking and iron and steel mills．The edvances in the other provinces varied from two fifths of an hour in Nova Scotia，to seven－ tenths of an hour in Ontario and British Columbia．In Saskatchewan，the working week at July 1 was threectenths of an hour shorter than a month earlier．

At July 1，the most substantial change in the average hourly earnings was a decline of 3.7 cents from the figure of 95.0 cents for Nova Scotia at June 1 ，when the average had been raisod by premium rates for work in the fron and stool mills on May 24th；at May $l_{s}$ the generol rate in manufacturing was also highor，at 92.3 cents．Upward rovisions of wages in lumber mills and in some other major industries were largely responsible for the increase of 203 cents in the average 1／Statistics for Newfounciland are fiven on Page 6．

## AVERAGE HOURLY EARNINGS

IN
DURABLE MANUFACTURED GOODS INDUSTRIES

$\bullet$
hourly oarnings in manufacturing in British Columbia. Very slight advances in oarnings were reported in Quebec and Saskatchewan. lhe average hourly earnings in manufacturing in Kanitoba, Alberta and Ontario decilned by 0.9 cents, 0.5 conts and 0.1 cents, respectively, as compared with a month earlier. The average hourly earnings in New Brunswick were 89.8 cents at July 1 , as at June 1.

## 4. Statistics for the Largor Cities.

As compared with a month earlier, a longer working week was reported in manufacturing at July 1 in 4 of the 5 cities for which data are published in this bulletin. The average working time was sevenctenths of an hour longer than a month earlier in Montreal, 1.1 hours longer in Winnipeg and Vancouver, and fourofifths of an hour longer in Toronto. These increases were largely due to a roturn to more normal working hours than in the week of June $l_{\text {, }}$ which had included the Victoria Day holiday, observed in many establishments with or without pay. With a reductiou in overtime work in some plants, the average in Hamilton was 102 hours shorter than in the week of June 1.

Manufacturers in Montreal and Vancouver reported increases of three fifths of a cent and 3.3 cents, respectively in their avarage hourly rates. Upward revisions of wage rates were largely responsible for the se advancos, although certain changes in the industrial distribution of the wage-earners and their hours of work contributed to the higher figures. The most substantiul decline in the period under review was a drop of 1.3 cents in eamings in Winnipege partly due to an incroase in loweropald casual help in some industries. There were slight decreases in the hourly oarnings in the other cities for which data are given, amounting to onestenth of a cent in Toronto, and twoufifths of a cent in Hamilton.

In studying the comparisons given in Table $A$ on page 2, and the data in the tables at the end of this report, it should be kept in mind that the industrial and related occupational and sex distributions of the vage earners reported by loading firms in the various provinces and larger cities have an important influence on the differences shown in the amounts by which the hourly earnings in manufacturing as a whole heve risen in the period of observation, and also materially arfect the levels of earnings.

## 5. Statistics for liewfound land:

Statistics of man-hours, hourly earnings and weokly wages reported by loading employers in Newfoundand for their hourly-rated wage-eamers are given in Table B.

There was a very slight decline in the average houre worked in manufacturing in the weok of July 1 as compared with a month earlier. The avorage hourly earnings increased by 7.2 cents in the samo period, mainly as a result of upward revisions in wage rates in certain industries and thes termination of industrial disputes which had affected the situation at the baginaiag of June。

The introduction of a shorte: work wak with the same "take-home" pay was largely responsible for the decline of 30 f hour's in the average time worked in mininge and the advance of 2.9 cents in the average hourly esmings.

1/ The first monthly statistics on man hours and hourly garnings for this province were published in the recentlyoissued bulletin "Trends of Employment, Earnings and Hours in Newfoundland", Report 9-70.0.
