Average Hourly Earnings, Manufacturing ..... 2
EXPLANATORY NOTES AND FOOTNOTES
Notes on methods and scope of monthly surveys of hours and earnings and footnotes to tables facing page ..... 1

General.- The monthly statistics of average hours, average hourly earnings and average weekly wages, like those of employment, payrolls and avarage weakly magos and salaries, are based on data from ostablishments usually employing 15 persons and over.

Coverage.- Firms are asked to furnish information for the nale and fomale wago-arners for whom they keep records of hours worked, so that the statistics relate, in the main, to hourly-rated wage-earners, or production workers, emplnyed full time and part-time. Casual workers are also included. Data for salaried personnel are purposely excluded. In many cases, information is not avallable for certain classes of wageearners, whose earnings, like those of most salaried employees, are not directly dependent on the number of hours worked; examples of wage-earners frequently excluded are route drivers, piece-workers in many but not $a l l$ establishments, truck men, etc. Numerous employers do not keep record of man-hours for any classes of employees. The number of workers for whom information is given in the present report is therefore smaller than the total number of workers (wage-earners and salaried employees) for whom statistics of employment, payrolls, average earnings, sex distribution, etc., are given in the monthly bulletins on employment and payrolls (Report 9-4010).

In manufacturing, largely represented in the statistics of this report, the data relate to over $75 \mathrm{p} . \mathrm{c}$. Of all employees on the staffs of the firms co-operating in the monthly surveys of employment and payrolls; in 1948, the wage-earners for whom information on man-hours was obtained formed over 80 p.c. of the total number of wage-earners reported by practically all manuracturing establishments to the annual Census of Manufactures, including hourly-rated and other wage-earners. In mining and construction, data on man-hours and hourly earnings are provided for approximately $84 \mathrm{p} . \mathrm{c}$. and $71 \mathrm{p} . \mathrm{c}$. of the total emplovees of firms co-operating in the monthly surveys of employment and payrolls in those industries, respectively; in 1948, the monthly statistics were based on approximately 89 p.c. and 54 p.c. of the total number of wage-earners reported to the Census of Mining and Census of Construction, respectively.

Man-Hours. - The statistics of man-hours include hours worked by full time and part-time mage-oarners, including overtime hours actually worked; premium or penalty hours crecited for purposes of computing overtime payment are not included. Hours credited to wage-arners absent on leave with pay in the reported pay periods are included in the statistics as though the hours had been worked. The averafer are obtained by difiding the aggregate hours reported for the week by the number of full time and part-time wage-arners working such hours.

Wages.- The questionnaire calls for a statement of gross wages earned by the full time and parttime wage-arners whose hours are reported, before deductions are made for taxes, unemployment insurance contributions, etc. Payments for overtime work, incentive or production, and cost-or-ifing bonuses paid at regular intervals, and amounts credited to wage-arners on leave with pay in the reported pay periods are included. The value of board and ladging which in some cases is part of the romuneretion of workers is not included. Retroactive pay not earned during the reported pay period, and bonuses paid at infrequent intervals are also excluded.

Pay Periods.- Statistics of man-hours and wages reported for periods exceeding one week in duration are reduced by the appropriate proportions to calculate the number of hours and the wages in one week in the stated pay period. Such data are combined with weekly figures furnished by emplovers whose records are maintained on a weokly basis, so that, in all cases, the tabulated statistios represent the situation in one week in each month.

## Footnotes.

The following foctnotes explain the content of various industrial classes listed in the detalled tables in this bulletin. In some industries, the group breakdown is loss extensive than in the standard Industrial Classification; in these cases, figures for certain categories not shown are contained in the group totals.
(a) Alluvial gold and auriferous quartz mining.
(b) Copper-gold-silver; iron; nickel-copper; silver-cobalt; silver-lead-zinc, and miscellaneous motal mining.
(c) Non-metal mining and quarroing, clay and sand pits.
(d) Miscellaneous wood products.
(e) Paper boxes and bags; roofing papers; miscellaneoue paper products.
(f) Household, offloe and store machinery; machine tools; machinery, n.e.s.
(g) Abrasives, asbestos, hydraulic cement, clay, glass, lime and gypsum, stone, concrete and miscellaneous non-metalilc products.
(h) Buildings and structures, other construction, and special trade contractors.
(1) Interurban bus and coach and urban and suburban transportation syatem; taxi-cab and truck transportation; services incidental to transportation, and other transportation.
(j) Hotels and restaurants, laundries, dyeing, cleaning and pressing, business and recreational services.
(..) figures not available.

## A. Industrial Statistics

1. Manufacturing. - The number of hourly-pald wage-earners reported in manufacturing at Mar. Iincreased by 0.7 p.c. from Fob. 1; while thoir aggregate weekly wages rose by 0.4 p.c., their total of hours worked foll by 0.5 p.c. The decline in hours resulted from several causes - shortages of materials, industrial disputes, the prevelence of influenza, etc. The average was 42.3 hours, compared with 42.9 in the wook of Feb. 1. The average hourly earnings rose by 1.0 conts, to 111.4 conts at the date under review.

Durable Goods Industries.- There was a 1.0 p.c. increase in the hourly-paid omployes reported in the durable goods industries, accompanied by a.2 p.c. rise in the gross wages paid by the co-operating firms. Continued upward adjustments in wage rates were partly responsible for a 1.5 cent gain in hourly oarnings reported in the iron and stoel industry. The increase of 2.1 p.c. in the number of wage-earners reported in transportation quipment as a whole was accompanied by a reduction in the working hours, largely due to the above-named factors. The hourly eamings, however, fractionally increased. In the aircraft and parts industry, there was a decline in the average hourly earnings as compared with Feb. 1 ; this partly resulted from curtailment in overtime hours, but the addition of workers at the lower rates of pay contributed.

Non-Durable Goods Industries.- The number of hourly-pald wage-oarmers reported in the production of non-durable manufactured goods increased by 0.4 p.c., with 0.5 p.c. more boing paid out in wages for a slightly reduced work weok. Increases in employment in the clothing, pulp and paper, leather and textile industries were accompanied by slightly lower levels of employment in food and beverages. These changes in the distribution of employment contributed to an increase of 1.2 cents in the average hourly carnings in the light manufacturing industries as a group, but upward revisions were reported in the wage rates paid in numerous industries and estabishments.
2. Mining. - A slight decilne in the number of wage-orners was indicated in mining, accompanied by a decrease of 1.7 p.c. in working hours. The reported weekly wages, however, showed a rise of 0.2 p.c. In the month. The gain of 2.5 cents in the average hourly earnings in this group of industries partly reflected widespread wage increases, but changes in the industrial distribution of the enployees and the hours reported contributed to the higher figure at the date under review.
3. Construction.- Employment of wage-earners in the construction industries fell off 3.1 p.c., due in part to considerable decline in highway, bridges and etreet work. With the release of substantial numbers of workers at the lower rates of pay, the average hourly earnings rose slightly botween Fob. 1 and Mar. 1.

## B. Provincial and City Statistics.

The average hourly eamings in manufacturing rose in all profinces, by amounts ranging from 0.2 cents in British Columbia to 2.4 cents in Saskatchowan. The higher average in the Prairie Provinces largely reflected decreased employment, with the discharge of lower-paid help. Upward edjustments in the wage rates in numerous industries contributed to the general advances in manufaoturing and also in non-manufacturing classes.

There were increases in the average hourly earnings in manufacturing in all citios for which data are published, the largest gain boing in Hamilton. The averages in buildings and structures rose in Montreal, Toronto and Windsor, but decinod slightiy in Hamilton and Vancouver; there was an insignificant change in Winnipeg.

## AVERAGE HOURLY EARNINGS <br> IN MANUFACTURING

Table 1.- Changes in the Average Barnings of Rourly-rated Fage-oarnors Roportod at Mar. 1, 1951, as comparod with the same date in preceding years.
