EXPLAHATORY NOTES AND FOOTNOTES
Motes on mothods and soope of monthly surveys of hours and earninge and footnotes to tables ..... 1

## EXPLANATORY NOTES.

General.- The monthly statistics of average hours, average hourly earnings and average weekly wages, like those of employment, payrolls and average weokly wages and salaries, are besed on data from establishments usually omploying 15 persons and over.

Coverage.- Firms are asked to furnish information for the male and fomale wage-eamers for whom they keep records of hours worked, so that the statistics relato, in the main, to hourly-rated wage-oarners, or production workers, employed full time and part-time. Casusl workers are also included. Data for salaried personnel are purposely excluded. In many cases, information is not available for certain classes of wageearners, whose earnings, like those of most salaried employees, are not direotly dependent on the number of hours worked; examples of wage-earners frequently excluded are route drivers, plece-workers in many but not all establishments, truck men, otc. Numerous omployers do not keop record of man-hours for ant clacses of employees. The number of workers for whom information is given in the present report is therefore smaller than the total number of workers (wage-earners and salaried omployees) for whom statistics of employment, payrolls, avarage oarnings, sex distribution, otc., are given in the monthly bulletins on employment and payrolls (Report 9-4010).

In manufacturing, largely represented in the statistics of this roport, the data relate to over 75 p.c. of all employees on the staffs of the firms co-operating in the monthly surveys of employment and payrolls; in 1948, the wage-barners for whom fuformation on man-hours was obtained formed over $80 \mathrm{p} . \mathrm{c}$. of the total number of wage-earners reported by practically all manufacturing establishments to the Annual Census of Manufactures, including hourly-rated and other wage-arners. In mining and construction, data on man-hours and hourly earnings are provided for approximately $84 \mathrm{p} . \mathrm{c}$. and $71 \mathrm{p} . \mathrm{c}$. of the total employees of firms co-operating in the monthly surveve of employnent and payrolls in those industries, respectively; in 1948 , the monthly statistics were based on approximately $89 \mathrm{p} . \mathrm{c}$. and $54 \mathrm{p} \cdot \mathrm{c}$. of the total number of wage-earners reported to the Census of Mining and Census of Construction, respectively.

Man-Hours. - The statistics of man-hours include hours worked by full time and part-time wage-oarners, including overtime hours actuslly worked; premina or penalty hours oredited for purposes of computing overtime payment are not included. Hours credited to wage-oarners absent on leave with pay in the reported pey periods are included in the statistics as though the hours had been worked. The averages are obtained by dividing the aggregate hours reported for the week by the number of full time and part-time wage-arners working such hours.

Wages.- The questionnaire calls for a statement of gross wages earned by the full time and parttime wage-arners whose hours are reported, before deductions are made for taxes, unemployment insurance contributions, etc. Payments for overtime work, incentive or production, and cost-of-living bonuses paid at regular intervals, and amounts credited to wage-arnors on leave with pay in the reported pay periods are included. The value of board and lodging which in some cases is part of the remuneration of workers is not included. Retroactive pay not osrned during the reported pay period, and bonuses paid at infrequent intervals are alsc oxcluded.

Pay Poriods.- Statistics of man-hours and wages reported for periods exceedinp one wesk in duration are reduced by the appropriate proportions to calculate the number of hours and the wages in one weok in the stated pay period. Such data are combined with woekly figures furnished by employers whose records are maintained on a weskly basis, so that, in all cases, the tabulated statistics ropresent the situation in one weok in erch month.

## Footnotes.

The following footnotes explain the content of various industrial classes listed in the detailed tables in this bulletin. In some industries, the group breakdown is loss extensive than in the Standard Industrial Classiflcation; in these cases, figures for certain categories not shown are contained in the group totala.
(a) Alluvial gold and auriferous quarte mining.
(b) Copper-gold-silver; iron; nickel-copper; silver-cobalt; silver-lead-\&inc, and miscollaneous motal mining.
(c) Non-motal mining and quarrving, clay and sand pits.
(d) Miscellaneous wood producte.
(e) Paper boxes and bags; roofing papers; miscellaneous paper products.
(f) Household, office and store machinery: machine tools; machinery, n.e.s.
(g) Abrasives, asbe日tos, hydraulio coment, clay, glass, lime and gypsum, stone, concreto and miscellaneous non-metalific products.
(h) Buildings and structures, other construction, and special trade contractors.
(1) Interurban bue and coach and urban and suburban transportation system; taxi-cab and truck transportation; services incidental to transportation, and other transportation.
( $f$ ) Hotels and restaurants, laundries, dyeing, cleaning and pressing, business and recreational services.
(..) figures not available.

MAN-HOURS AND HOURLI EARNINGS, MAY, 1961.

## MANUFACTUR ING

Average hourly earnings in manufacturing in Canada rose slightly in the weel ending May $l$ to a new high of 114.1 cents, 11.3 p.c. higher than at the same date last year. Since 1945 when the May l, figure was 70.5 cents, the hourly earnings have risen by 61.8 p.c. Increases in wage rates and in cost-of-living bonuses, and longer hour $s$ of work at premium rates, were largely responsible for the advance in the month.

## Durable Goods Induetries

The inorease of 1.2 cents per hour in durable goods manufacturing as compared With Apr. I, was attributable largely to changes in the wood producte and iron and steel industries. Higher wage rates were reported in furniture, aircraft, iron foundries and sheet metal establishment and other groups; increased industrial activity, with higher incentive bonuses also contributed to the general gains. Average hourly earnings rose in all major branches of the durable goods industry with the exception of the motor vehicle and parts group in which the general level of activity was lower. Since May, 1950, the hourly earnings in the heavy manufactured goods class have risen by 11 p.c.

Non-Durable Goods Industries
In this oategory, the largest changes in hourly earnings as compared with a month earlier were $r$ eported in the tobacco and the products of petroleun and caal industries; in the former, higher cost-of-living bonuses and the seasonal lay-off of lower paid workers caused a rise of 10.1 cents in the average hourly earnings. In the latter, the inorease was 6.5 cents, largely resulting from upward adjustments in wage rates. Significant changes were also evident in distilled and malt liquors establishments where decresed numbers of wage-earners at lower wage levels contributed to an incease of 2.3 oents in the hourly earnings, and in the chemical products groups, where overtime in some factories and higher wage rates in others caused a general gain of 2 cents in the average carnings. Earnings in non-durable goods industries, generally, increased by 1.3 cents over the month; with a fractional increase in the hours workod. A year ago, hourly earninga were 94.3 cents or 11.0 p.c. below the current month's figure.

## STATISTICS FOR METROPOLITAN AREAS

There was little change in either the hours worked or in the average hourly earnings of wage-earners among the various industries in most of the cities for wich data are shown in this bulletin. In Windsor, the number of wegeearners in the transportation equipment industry was roduced; the overtime work was largely - liminated and ther was a consequent drop in hourly earnings. In that city. seasonally longer hours were reported in the buildings and structures industry; with an increase in the number of hourly paid wage-earners, the average hourly earnings eased off somewhat. Wage inoreases and overtime in Montreal's tobacco industry boosted hourly earnings, while in electrical apparatus and supplies, higher wage rates were paid. In Toronto an increase of 1.8 cont was reported over the month, due to wage rate increases in a variety of industries. In Winnipeg the change to 40-hour work-week, with the same take-home pay in railway car shopa was

## AVERAGE HOURLY EARNINGS <br> IN MANUFACTURING <br> IN FOUR EASTERN PROVINCES

## AVERAGE HOURLY EARNINGS <br> IN MANUFACTURING <br> IN FOUR WESTERN PROVINCES

an important factor in raising the general average for manufacturing by 2.8 coats. The 2.9 cent increase in Hamilton was the result of increased production and higher wage-rates in the transportation equipment and iron and steel industries.

## PROVINCIAL STATISTICS FQR PRINCIPAL INDUSTRIES

Increases in aver age hourly earnings occurred in mamufacturing in all provinces except Nova Scotia during the last week of April, acoompanied by longer hours of work in all provinces except New Brunswick and Manitoba. The greatest increase in hourly carnings ( 3.3 cents) was in Newfoundland where overtime in the foods and beverages and the paper products industries were factors. In Manitoba, the situation already mentioned in connection with Winnipeg, with higher wage rates in iron and steel and other industries, contributed materially to the increase in the month.

The lower hourly earnings in Nova Scotia were brought about partly by a seasonal increase in the number of wosen workers in canning and curing fish, and by reduced activity in shipbuilding.

Forestry wage-earners in British Columbia received wage inoreases and overtime payments, to raise hourly earnings by 6.7 cents. Higher rates were reported in metal mining in Alberta, where a return to more normal hours in coal mines, (affected at Apr. 1, by shortages of box cars) was also a favourable factor.

The charts in this bulletin show provinoial averages of hourly aarnings in manufacturing, in the years 1945 to 1951 , by months. At May 1 , the figures for Ontario showed the greatest percentage gain in the 6 year period ( $67.4 \mathrm{p} . \mathrm{c}$.) , and also in the past year ( $12.3 \mathrm{p} . \mathrm{ce}_{\mathrm{o}}$ ). Other increases since 1945 weres Nova Scotia, 34.9 p.c.: New Brunswick, 58.8 p .0 .9 Quebec. $56.1 \mathrm{p.c.i}$ Manitoba. $60.7 \mathrm{p.c.i}$ Alborta, 54.4 p.o.; British Columbia, 63.2 p.c.
