AVERAGE WEEKLY WAGES OF HOURLY-RATED WAGE-EARNERS IN:

10. Manufacturing, Canada and Provinces	19
11. Manufacturing, Metropolitan Areas	20

EXPLANATORY NOTES AND FOOTNOTES

Notes on methods and scope of monthly surveys of hours and earnings and footnotes to tables	facing page . 1
---	-----------------

EXPLANATORY NOTES.

General.- The monthly statistics of average hours, average hourly earnings and average weekly wages, like those of employment, payrolls and average weekly wages and salaries, are based on data from establishments usually employing 15 persons and over.

Coverage.- Firms are asked to furnish information for the male and female wage-earners for whom they keep records of hours worked, so that the statistics relate, in the main, to hourly-rated wage-earners, or production workers, employed full time and part-time. Casual workers are also included. Data for salaried personnel are purposely excluded. In many cases, information is not available for certain classes of wage-earners, whose earnings, like those of most salaried employees, are not directly dependent on the number of hours worked; examples of wage-earners frequently excluded are route drivers, piece-workers in many but not all establishments, truck men, etc. Numerous employers do not keep record of man-hours for any classes of employees. The number of workers for whom information is given in the present report is therefore smaller than the total number of workers (wage-earners and salaried employees) for whom statistics of employment, payrolls, average earnings, sex distribution, etc., are given in the monthly bulletins on employment and payrolls (Report 9-4010).

In manufacturing, largely represented in the statistics of this report, the data relate to over 75 p.c. of all employees on the staffs of the firms co-operating in the monthly surveys of employment and payrolls; in 1948, the wage-earners for whom information on man-hours was obtained formed over 80 p.c. of the total number of wage-earners reported by practically all manufacturing establishments to the Annual Census of Manufactures, including hourly-rated and other wage-earners. In mining and construction, data on man-hours and hourly earnings are provided for approximately 84 p.c. and 71 p.c. of the total employees of firms co-operating in the monthly surveys of employment and payrolls in those industries, respectively; in 1948, the monthly statistics were based on approximately 89 p.c. and 54 p.c. of the total number of wage-earners reported to the Census of Mining and Census of Construction, respectively.

Man-Hours.- The statistics of man-hours include hours worked by full time and part-time wage-earners, including overtime hours actually worked; premium or penalty hours credited for purposes of computing overtime payment are not included. Hours credited to wage-earners absent on leave with pay in the reported pay periods are included in the statistics as though the hours had been worked. The averages are obtained by dividing the aggregate hours reported for the week by the number of full time and part-time wage-earners working such hours.

Wages.- The questionnaire calls for a statement of gross wages earned by the full time and part-time wage-earners whose hours are reported, before deductions are made for taxes, unemployment insurance contributions, etc. Payments for overtime work, incentive or production, and cost-of-living bonuses paid at regular intervals, and amounts credited to wage-earners on leave with pay in the reported pay periods are included. The value of board and lodging which in some cases is part of the remuneration of workers is not included. Retroactive pay not earned during the reported pay period, and bonuses paid at infrequent intervals are also excluded.

Pay Periods.- Statistics of man-hours and wages reported for periods exceeding one week in duration are reduced by the appropriate proportions to calculate the number of hours and the wages in one week in the stated pay period. Such data are combined with weekly figures furnished by employers whose records are maintained on a weekly basis, so that, in all cases, the tabulated statistics represent the situation in one week in each month.

Footnotes.

The following footnotes explain the content of various industrial classes listed in the detailed tables in this bulletin. In some industries, the group breakdown is less extensive than in the Standard Industrial Classification; in these cases, figures for certain categories not shown are contained in the group totals.

- (a) Alluvial gold and auriferous quartz mining.
- (b) Copper-gold-silver; iron; nickel-copper; silver-cobalt; silver-lead-zinc, and miscellaneous metal mining.
- (c) Non-metal mining and quarrying, clay and sand pits.
- (d) Miscellaneous wood products.
- (e) Paper boxes and bags; roofing papers; miscellaneous paper products.
- (f) Household, office and store machinery; machine tools; machinery, n.e.s.
- (g) Abrasives, asbestos, hydraulic cement, clay, glass, lime and gypsum, stone, concrete and miscellaneous non-metallic products.
- (h) Buildings and structures, other construction, and special trade contractors.
- (i) Interurban bus and coach and urban and suburban transportation system; taxi-cab and truck transportation; services incidental to transportation, and other transportation.
- (j) Hotels and restaurants, laundries, dyeing, cleaning and pressing, business and recreational services.

(..) figures not available.

MAN-HOURS AND HOURLY EARNINGS, SEPTEMBER, 1951.

MANUFACTURING

The average hourly earnings in manufacturing showed a slight increase for Canada in the week ending Sept. 1, 1951, as compared with a month earlier, while the average hours worked increased fractionally, bringing the average weekly wages past the \$50 mark for the first time since data have been collected.

The Sept. 1 figure of average hourly earnings, at 120.6 cents, compared with

119.1 cents at Aug. 1, 1951.
104.4 cents at Sept. 1, 1950.
69.5 cents on the average in 1945.
70.0 cents on the average in 1946.

The average hours worked in the week of Sept. 1, at 41.5, compared with

41.4 hours in the week ending Aug. 1, 1951.
41.9 hours in the week ending Sept. 1, 1950.
44.3 hours on the average in 1945.
43.0 hours on the average in 1946.

Durable Goods

In the past month, average weekly wages in durable manufactured goods industries have risen as the result of increases in average hourly earnings and average hours worked. Hourly earnings in wood products, iron and steel products, transportation equipment, electrical apparatus and supplies and non-metallic mineral products rose by varying amounts during the week under review. Compared with the average of 1945, the current weekly wages are 57.6 p.c. higher.

Non-Durable Goods

A further rise in both hourly earnings and average hours worked occurred in the production of non-durable manufactured goods, to make the current weekly wages 72.6 p.c. higher than in 1945. As compared with a month earlier, there were considerable advances in the hourly earnings in meat, petroleum and rubber products and some other industries. Changes in industrial distribution and upward adjustments in wage rates contributed to the higher figures of hourly and weekly earnings in the light manufacturing industries as a whole.

STATISTICS FOR THE PROVINCES.

Hourly-rated wage-earners in manufacturing generally in Newfoundland worked fewer hours in the week of Sept. 1, as compared with the week of Aug. 1, and earned slightly less per hour due to changes in the industrial distribution of hours worked. Foods and beverages showed small increases in both average hourly earnings and average hours, reflecting a decline in the employment of casual help in fish canning factories. There was greater employment in the buildings and structures industry, and overtime at premium rates raised the average hourly earnings substantially. In Nova Scotia, the aggregate hours worked in manufacturing decreased, but average hourly earnings remained constant. The drop in hourly earnings which occurred in food and beverages can be attributed partly to increased seasonal employment and shorter working hours compared with last month, when overtime was worked. Hours and hourly earnings were down in the iron and steel industry, but in wood products hourly earnings were slightly higher. Average hourly earnings in construction generally were slightly up, and hours worked

slightly down, due to a shift in employment from highway, bridge and street construction to building and structures. In the other Maritime Province for which data are published, New Brunswick, both the average hourly earnings and the average hours worked rose in general manufacturing. Higher hourly earnings were recorded in saw and planing mills and in pulp and paper mills, although the increases were small. Increased employment in railway shops accompanied moderate declines in average hourly earnings in transportation equipment generally. In the buildings and structures, and highway, bridge and street construction groups, higher hourly earnings were recorded.

In the Central Provinces, the average hourly earnings rose somewhat; in Quebec, the number of hours in the working week showed a slight advance, but in Ontario, the hours were unchanged from the same week a month earlier. In both provinces, wage adjustments in the meat packing industry helped to increase hourly earnings in the food and beverages group generally. Similarly, average hourly earnings in products of petroleum and coal in each province rose because of higher wage rates. In Quebec, hourly rated wage-earners in non-ferrous metal products were given increases in wages and in cost-of-living bonuses; this was also the case in buildings and structures. Hourly earnings in the rubber products industry in Ontario rose moderately, by reason of wage increases.

Average hourly earnings in manufacturing were up in each of the Prairie Provinces, with Saskatchewan recording the greatest gain of 3.6 cents; there were insignificant changes in the number of hours worked. Wage increases were granted in all 3 provinces in meat packing plants, and in Saskatchewan, higher wage rates for workers in malt and distilled liquors accompanied a change to a 40-hour work week. In the same province, higher rates were paid in saw and planing mills, while overtime in iron and steel raised the average hourly earnings. Wage earners in Alberta's petroleum and buildings and structures industries received upward adjustments in their rates of pay. Heavy overtime by skilled labour also tended to raise the average hourly earnings in buildings and structures in that province.

Wage earners in meat packing plants, saw and planing mills, as well as in the buildings and structures and the iron and steel industries in British Columbia were paid at higher rates, while a seasonal lay-off in peat cutting operations caused a drop in average hourly earnings in non-ferrous metal products.

STATISTICS FOR METROPOLITAN AREAS.

In each of the 6 cities for which data are published in this bulletin, the average hourly earnings in manufacturing rose, the increase of 5.0 cents in Vancouver being highest, followed by those in Toronto, Hamilton, Montreal, Winnipeg and Windsor. In Montreal, wage increases and overtime raised average hourly earnings in transportation equipment. The situation in the tobacco industry in that city was seriously affected by industrial disputes. The wage increase in meat packing plants already mentioned, were reflected in higher average hourly earnings in many centres, notably Toronto and Winnipeg. A shortage of material for manufacturers of transportation equipment in Hamilton contributed to substantially lower average earnings and average hours. In Toronto wage increases contributed to a rise of 8.7 cents in the hourly earnings in the same industry. Heightened activity was noted in buildings and structures in Windsor, and the average hours and earnings were higher. The seasonal lay-off of casual employees was partly responsible for higher average hourly earnings in printing, publishing and allied industries in Winnipeg. The settlement of industrial disputes in buildings and structures in Vancouver, contributed to higher wage rates and longer working hours than in the week ending Aug. 1.
