TEXTUAL SUMMARY ..... 1
TABLES

1. Changes in the Average Earnings of Hourly-rated Wage-earners Reported at Jan. 1, 1952, as compared with the same date in preceding years ..... 5
2. Average Hours and Average Hourly and Weekly Wages of Hourly-rated Wage-arners, Canada, by Industry ..... 6
AVERAGE HOURS AND AVERAGE HOURLY EARNINGS OF HOURLY-RATED WAGE-EARNERS IN:
3. Manufacturing, Canada ..... 7
4. Specified Non-Manufaoturing Industries, Canada. ..... 8
5. Manufacturing, Provinces ..... 12
6. Mamifacturing, Metropolitan Areas ..... 14
7. Specified Industries, Provinces ..... 16
8. Specified Industries, Netropolitan Areas ..... 19
INDEX NUMBERS OF AVERAGE HOURLY EARNINGS IN:
9. Heavy Electrical Maohinery and Equipment Industry ..... 20
AVERAGE WEEKLY WAGES OF HOURLY-RATED WAGE-EARNERS IN:
10. Kamufaoturing, Canada and Provinces ..... 21
11. Mamifaoturing, Motropolitan Areas ..... 22

CHART
Average Hourly Earnings in Mamfacturing, Four Eastern Provinoes ..... 2
Average Hourly Earnings in Manufacturing, Four Western Provinoes ..... 3

## EXPIANATORY NOTES AND FOOTNOTES

Notes on thods and scope of monthly surveys of hours and earnings and footnotes

General.- The monthly statistics of avorage hours, average hourly earnings and averago meokly wagos, like those of employment, payrolls and avarage weokly wages and salaries, are based on data from establishmente usually omploying 15 persons and over.

Coverage.- Firms are asked to furnish information for the male and fomale wageormers for whom they keep records of hours worked, so that the statistics relato, in the main, to hourly-rated wage-arners, or production workers, emplnyed full time and part-time. Casual workers are also included. Data for salaried personnel are purposely excluded. In many cases, information is not avallable for cortain classes of wageearners, whose earnings, like those of most salaried employes, are not direotly dependent on the number of hours worked; oxamples of wage-earners frequently excluded are route drivers, piece-workers in many but not all establishments, truck men, etc. Numerous emplovers do not ksep record of man-hours for any classes of employees. The number of workers for whom information $1 s$ given in the present roport is therefore smaller than the total number of workers (wage-arners and salaried employees) for whom statistics of employnent, payrolls, averago earnings, sex distribution, otc., are given in the monthly bulletins on employment and payrolls (Report 9-4010).

In manufacturing, largely represented in the statistics of this report, the data relate to over 75 p.c. of all omployees on the staffs of the firms co-operating in the monthly surveys of employment and payrolls; in 1948, the wage-earners for whom information on man-hours was obtained formed over 80 p.c. of the total number of wage-earners roported by practically all manufacturing establishnents to the Annual Consus of Manufactures, including hourly-rated and other wage-earners. In mining and construction, data on man-houre and hourly earnings are provided for apprarimately 84 p.c. and 71 p.c. of the total employees of firms co-operating in the monthly surveys of employment and payrolls in those industries, respectivelys in 1948 , the monthly statistics were based on approximately $89 \mathrm{p} . \dot{c}$. and $54 \mathrm{p} . \mathrm{c}$. of the total number of wage-sarners reported to the Census of Mning and Census of Construction, respotively.

Man-Hours:- The statistics of man-hours include hours morked by full time and part-time wage-earners, including overtime hours actuslly worked; prem\{um or penalty hours credited for purposes of computing overtine payment are not included. Hours credited to wage-earners absent on leave with pay in the reported pay periods are included in the statistics as though the hours had been worked. The averages are obtained by dividing the aggregate hourg reported for the weak by the number of full time and part-time wage-earners working such hours.

Wages. - The questionnaire calls for a statement of gross wages earned by the full time and parttime wage-earners whose hours are reported, before deductions are made for taxes, unomployment insurance contributions, otc. Payments for overtime work, incentive or production, and cost-of -11 ving bonuses paid at regular intervals, and amounts credited to wage-earners on leave with pay in the reported pay periods are included. The valuo of board and lodging which in some cases is part of the remuneretion of workers is not included. Retroactive pay not earned during the reported pay period, and bonuses paid at infrequent intervals are also excluded.

Pay Poriods.- Statistics of man-hours and wages reported for periods excesding, one week in duration are reduced by the appropilate proportions to calculate the number of hours and the wages in one week in the stated pay perlod. Such data are combined with woekly figures furnished by omployers whose records are maintained on woekly basis, so that, in all cases, the tabulated statistics ropresent the situation in one weak in each month.

## Footnotes.

The following footnotes explain the content of verious industrial classes insted in the detailed tables in this bulletin. In some industries, the group broakdom is loss extensive than in the Standard Industrisi Classification; in these cases, figures for certain categories not shown are contained in the group totals.
(a) Allurial gold and auriforous quartz mining.
(b) Copper-gold-silver; iron; nickel-copper; silver-cobalt; silver-lead-zinc, and miscelleneous motal mining.
(c) Non-metal mining and quarrying, clay and sand pits.
(d) Miscellaneous wood products.
(o) Paper boxes and bags; roofing papers: miscellaneous paper producte.
(f) Household, office and store machinery; machine tools; machinery, n.e.B.
(g) Abrasives, asbestos, hydraullc cement, clay, glass, lime and gypsum, stone, concrete and mícelianeous nom-metallic products.
(h) Buildings and structures, other construction, and specisi trade contractors.
(1) Interuman bus and cosch and urban and suburban transportation syotom; taxi-cab and truck transportation; services incidental to transportation, and other transportation.
(f) Hotels and restaurants, laundies, dyeing, cloaning and pressing, business and racrastional services.
(..) figures not available.

Hourly-rated wage-arners in manufacturing earmed an average of $\$ 48.44$ in the weok of Jan. 1, an amount less by $\$ 3.73$, or 7.1 p.c., than in the weok of Dec. 1. Shorter working hours during the holiday season and slackness in some industries were responsible for the decline, which exceeded the percentage reduction reported between Dec. 1 and Jan. 1 in any recent winter. This was partly due to the observance of Christmas, 1951, on a Tuesday, with consequently greater loss of working time than when the holidays fall nearer the week end, as in immediately preceding years. Shortages of orders in some industries also contributed to the unusually pronounced reduction in weekly wages at Jan. 1, 1952, in spite of the fact that increasingly large numbers of establishments are paying their wage-earners for certain holidays.

A comparison with the weekly wages recorded at Jan. 1, 1951, shows an increase of $10.8 \mathrm{p} . \mathrm{c}$. in the period under review. The hourly earnings in manufacturing reached a new all-time high of 126.8 cents, an increase of 2.3 cents over the previous month, and of 16.3 p.c. as compared with 12 months earlier.

Durable Manufactured Goods. - The average hourly earnings in the durable goods industries were 1.5 cents higher during the pay period under review than at Dec. 1. The largest increase was in the smelting and refining of non-ferrous metallic ores, where wage-rate adjustments and overtime payments resulted in an increase of 3.5 cents. The hours in all major groups were shorter.

Non-durable Manufactured Goods. - The number of hourly-rated wage-arners reported by the co-operating establishments in this division dropped by 4.9 p.c. during the pay period under review, due largely to seasonal lay-offs in canning factories, and slackness in the textile and clothing industries. The increase of 3.1 cents recorded in the hourly earnings in the group was partly the result of changes in the industrial distribution of workers and hours, partly reflected the payment of higher wage rates in certain industries, (notably breweries), and was partly due to overtime work at promiun rates during the holiday season.

Non-manufacturing Industries.- Wage-rate adjustments in metal mining, paymant at premium rates for work on the holidays, and variations in the distribution of hours worked resulted in an increase of 3.5 cents in the average hourly earnings in the mining industry as a whole at Jan. 1 as compared with Dec. 1. The substantial drop in the working week in coal mining was partly due to industrial disputes in Nova Scotia.

The building construction industry reported a seasonal decline in the number of wage-aarners and in the aggregate and average hours worked. Wage-armors in highway construction worked on the average 2.5 hours longer, largely beoause of heavy snowfalls in Quebeo and Ontario.

## Statistics for the Provinoes.

The average weokly wages in manufaoturing as a whole were lower in all provinces in the weok of Jan. I than during the comparable pay period a month earlier. This was due largely to reduced working time during the holiday season in many industries, with seasonal slackness in these and other lines of business. The most marked decreases were in British Columbia, Newfound land and Queboo, where the average wages fell by 10.9 p.c. 8.0 p.c. and 7.9 p.c. during the pay period under review. In British Columbia, a drop of 6.5 hours in the working wook in saw and planing mills was largely responsible for the lower earuings; in Newfound land, the averages in canned and cured fish and pulp and papor industries both fell by over 5 hours. In Quebec, short-time was roported in many industries, the most marked declines in working time occurring in clothing, wood produots and electrical apparatus and supplies

factories: wage-sarners in these groups, respectively, worked on the average 5.2 hours, 7.1 hours and 7.9 hours less in the weok of Jan. 1 than in that of Dec. 1. The aggregate wages paid hourly-rated wage-aarners in the larger manufaoturing establishments fell in all provinces; the losses varied from 12.7 p.c., 12.8 p.c. and 12.6 p.c. in New Brunswick, Newfoundland and British Columbia to 6.5 p.c., 6.2 p.c. and $5.7 \mathrm{p} . \mathrm{c}$. in Manitoba, Saskatchowan and Alberta, respectively.

The average hours worked in manufaoturing generally were lower in all provinces than in the week of Dec. 1. The decreases varied from 4.7 hours in British Columbia to 2 hours in Alberta. Time taken without pay during the holiday season was largely responsible for this drop. Hours credited during leave with pay are counted in this record as hours worked; as already mentioned, increasingly large mumbers of fims now pay their staffs for the year-end holidays. The declines in the hours reported worked during the week of Jan. 1 nevertheless varied from 14.2 p.c. in Nowfoundland, to 6.9 p.c. in Alberta.

The average hourly earnings in all provinces were higher in marmfacturing as a whole during the pay period under review than they were one month earlier. Wagerate adjustments in several industries were partly responsible for these increases, while payment at premium rates for work done on the holidays and variations in the industrial distribution of the hours reported were contributing factors. A 6 cent increase in Nova Scotia was the largest reported. Higher wage rates in the shipm building industry, payment at premium rates for time worked at the holiday season in some establishments, and greatly reduced working time in cortain industries where rates are below the general average were responsible for the over-all increase in hourly earnings. In the other provinoes, the advances varied from 1.6 cents in Alberta to 2.8 conts in Now Brunswiok.

## Statistics for the Cities.

The average hours worked in manufacturing as a whole in all oities for which man-hours statistios are published were shorter in the holiday weok of Jan. 1 than in the week of Dec. 1. The declines varied from 1.7 hours and 2.3 hours in Windsor and Winnipeg, to 4.6 hours and 5.2 hours in Montreal and Vanoouver, respectively. In the latter cities, short-time was reported in a large number of the important industries, mainly due to widespread observance of the holidays; with slackness in business also a faotor in some cases.

During the period under review, there were increases in average hourly oernings in the mamifaoturing industries in all 6 cities. In Findsor, where the largest advance of 3.6 cents took place, wage-rate increases and payment at premium rates in the automotive industry wore largely responsible. Changes in the industrial distribution of the hours reported in Hamilton were partly responsible for a rise of 2.7 conts in the hourly eamings in manufacturing generally in that city. In Montreal, wage-rate increases in the brewing and oleotrical apparatus industries were partly responsible for the increase of 1.7 cents in the average oarnings in manufacturing.

Payment at premium rates for time worked on the holidays resulted in higher hourly earnings for wage-arners employed by eleotrio and motor transportation companies, notably in Montreal and Toronto.

Table 1.- Changes in the Average Earnings of Hourly-rated Wage-earners Reported at Jan. 1, 1952, as compared with the same date in preceding years.
