EXPLANATORY NOTES AND FOOTNOTES

Notes on methods and scope of monthly surveys of hours and earnings and footnotes to tables	facing page 1
---	---------------

EXPLANATORY NOTES.

General.- The monthly statistics of average hours, average hourly earnings and average weekly wages, like those of employment, payrolls and average weekly wages and salaries, are based on data from establishments usually employing 15 persons and over.

Coverage.- Firms are asked to furnish information for the male and female wage-earners for whom they keep records of hours worked, so that the statistics relate, in the main, to hourly-rated wage-earners, or production workers, employed full time and part time. Casual workers are also included. Data for salaried personnel are purposely excluded. In many cases, information is not available for certain classes of wage-earners, whose earnings, like those of most salaried employees, are not directly dependent on the number of hours worked; examples of wage-earners frequently excluded are route-drivers, piece-workers in many but not all establishments, truck men, etc. Numerous employers do not keep record of man-hours for any classes of employees. The number of workers for whom information is given in the present report is therefore smaller than the total number of workers (wage-earners and salaried employees) for whom statistics of employment, payrolls, average earnings, sex distribution, etc., are given in the monthly bulletins on employment and payrolls (Report 8003-501).

In manufacturing, largely represented in the statistics of this report, the data relate to over 75 p.c. of all employees on the staffs of the firms co-operating in the monthly surveys of employment and payrolls; in 1948, the wage-earners for whom information on man-hours was obtained formed over 80 p.c. of the total number of wage-earners reported by practically all manufacturing establishments to the Annual Census of Manufactures, including hourly-rated and other wage-earners. In mining and construction, data on man-hours and hourly earnings are provided for approximately 84 p.c. and 71 p.c. of the total employees of firms co-operating in the monthly surveys of employment and payrolls in those industries, respectively; in 1948, the monthly statistics were based on approximately 89 p.c. and 54 p.c. of the total number of wage-earners reported to the Census of Mining and Census of Construction, respectively.

Man-Hours.- The statistics of man-hours include hours worked by full-time and part-time wage-earners, including overtime hours actually worked; premium or penalty hours credited for purposes of computing overtime payment are not included. Hours credited to wage-earners absent on leave with pay in the reported pay periods are included in the statistics as though the hours had been worked. The averages are obtained by dividing the aggregate hours reported for the week by the number of full-time and part-time wage-earners working such hours.

Wages.- The questionnaire calls for a statement of gross wages earned by the full-time and part-time wage-earners whose hours are reported, before deductions are made for taxes, unemployment insurance contributions, etc. Payments for overtime work, incentive or production, and cost-of-living bonuses paid at regular intervals, and amounts credited to wage-earners on leave with pay in the reported pay periods are included. The value of board and lodging which in some cases is part of the remuneration of workers is not included. Retroactive pay not earned during the reported pay period, and bonuses paid at infrequent intervals are also excluded.

Pay Periods.- Statistics of man-hours and wages reported for periods exceeding one week in duration are reduced by the appropriate proportions to calculate the number of hours and the wages in one week in the stated pay period. Such data are combined with weekly figures furnished by employers whose records are maintained on a weekly basis, so that, in all cases, the tabulated statistics represent the situation in one week in each month.

Footnotes.

The following footnotes explain the content of various industrial classes listed in the detailed tables in this bulletin. In some industries, the group breakdown is less extensive than in the Standard Industrial Classification; in these cases, figures for certain categories not shown are contained in the group totals.

- (a) Alluvial gold and auriferous quartz mining.
 - (b) Copper-gold-silver; iron; nickel-copper; silver-cobalt; silver-lead-zinc and miscellaneous metal mining.
 - (c) Non-metal mining and quarrying; clay and sand pits.
 - (d) Miscellaneous wood products.
 - (e) Paper boxes and bags; roofing papers; miscellaneous paper products.
 - (f) Household, office and store machinery; machine tools; machinery, n.e.s.
 - (g) Abrasives; asbestos; hydraulic cement; clay; glass; lime and gypsum; stone; concrete and miscellaneous non-metallic mineral products.
 - (h) Buildings and structures; other construction; special trade contractors.
 - (i) Interurban bus and coach and urban and suburban transportation systems; taxi-cab and truck transportation; services incidental to transportation; other transportation.
 - (j) Hotels and restaurants; laundries, dyeing, cleaning and pressing; business and recreational services.
- (...) figures not available.

MAN-HOURS AND HOURLY EARNINGS, OCTOBER, 1952.

Statistics for Canada

Manufacturing.- The average hours worked by hourly-rated wage-earners in manufacturing were 0.5 hours longer in the week of Oct. 1 than in that of Sept. 1. This is the longest working week reported since the week of Apr. 1, and a fifth of an hour longer than at Oct. 1, 1951. The durable and the non-durable goods divisions shared in the lengthened hours but the increase in the latter was slightly greater. The textile and clothing industries reported the longest working hours since May 1, 1951, and Dec. 1, 1950, respectively. Seasonal activity in fruit and vegetable canning raised the average by 3.9 hours. In the durable goods division, electrical apparatus and automobile parts manufacturers reported longer hours with some overtime, and the shipbuilding industry resumed more normal operations following the settlement of industrial disputes.

The average hourly earnings in manufacturing as a whole and in the durable goods division were the highest on record. The average in non-durable goods increased by 0.3 cents from Sept. 1, but remained lower than during the summer months, although it was 5.3 p.c. higher than at Oct. 1, 1951. Changes in industrial distribution in the month were partly responsible for the variations. Wage-rate increases in meat packing, chemical products, primary iron and steel and other industries also contributed.

The average weekly wages at Oct. 1 were the highest on record in manufacturing generally, and in the durable and non-durable divisions.

Non-Manufacturing Industries.- All major groups in the mining industry reported a longer working week at Oct. 1 than at Sept. 1. The most marked increase was in coal, mine operators in Nova Scotia and Alberta both reporting heightened activity. The hourly earnings rose substantially during the month in the fuel division and in the extraction of metallic ores other than gold. A new high was reached in hourly earnings in building construction, with the resumption of normal operations in British Columbia after an industrial dispute, and some wage increases in several provinces. With the release of lower-paid casual workers in highway construction, the average hourly rate rose. In the service division, the closing of summer hotels, with the resultant lay-off of inexperienced help, raised the average to an all-time high of 75.1 cents.

Statistics for the Provinces

The average hourly earnings of wage-earners in the co-operating manufacturing establishments were higher at Oct. 1 than at Sept. 1 in all provinces except Nova Scotia, where a rather small decline largely resulted from changes in industrial distribution of workers and hours. In part, these were due to the completion of orders in the transportation equipment industry. Industrial disputes in the iron and steel group also contributed. The largest increase was in New Brunswick, and was caused partly by changes in industrial distribution within the food and beverage group, and partly by longer hours in the iron and steel and pulp and paper industries. The 1.8 cent increase reported by manufacturers in Newfoundland was caused partly by wage-rate revisions and overtime in the food and beverage group, and partly by greater

AVERAGE HOURLY EARNINGS IN MANUFACTURING
1945 - 1952

AVERAGE WEEKLY WAGES IN MANUFACTURING

1945 - 1952

activity in pulp and paper mills. In Quebec, the change in hourly earnings in manufacturing generally was small; higher wage rates were paid by certain firms in the food and beverage and aircraft industries. In addition, the resumption of more usual operations in shipyards following the settlement of strikes tended to raise the general level. These factors were partially offset by losses due to industrial disputes in the iron and steel group and increased employment and longer hours of work in primary textile and clothing factories, where the rates are below the general average largely as a result of the employment of high proportions of women and of relatively unskilled workers. In Ontario, wage rates were revised in meat-packing, chemical and other plants. Wage-earners in the fruit and vegetable canning, rubber, leather goods, textile, clothing and electrical apparatus industries worked longer hours with higher hourly earnings than in the week ending Sept. 1. In Alberta, changes in industrial distribution within the food and beverage group and higher rates of pay in the printing and publishing industry were the most important variations over the month. The general averages in manufacturing showed little change in Manitoba and Saskatchewan. In British Columbia, upward revisions in wage rates in meat packing, bakery, chemical, pulp and paper and other industries contributed to an increase of 1.2 cents in manufacturing generally. Due to steel shortages, the aggregate hours worked by employees in the transportation equipment industry were lower than in the week of Sept. 1.

Factory wage-earners in Newfoundland, New Brunswick, Quebec and Ontario worked slightly longer hours during the week under review than in that of Sept. 1. In Saskatchewan and British Columbia, no change was reported. In Nova Scotia, Manitoba and Alberta, the working week was somewhat shorter. In all provinces but Nova Scotia, Manitoba and Alberta, the average weekly wages in manufacturing were higher than at Sept. 1.

Statistics for the Metropolitan Areas

In 4 of the cities for which statistics are published, the average working week in manufacturing at Oct. 1 was longer than that reported a month earlier. Shorter hours in the automotive industry resulted in a decline of an hour in Windsor, and in Winnipeg there was no change in the general average. The average hourly earnings were higher in all cities except Montreal, where industrial disputes in the iron and steel industry and increased employment in industries employing large numbers of women resulted in an insignificant decline in the hourly earnings in manufacturing generally. The most important gain was in Hamilton, reflecting upward revisions in wage-rates in iron and steel mills and overtime worked at premium rates in the transportation equipment industry. In Toronto, wage-rate increases were reported by meat-packing plants and certain other industries; more overtime work at premium rates in canning factories and electrical apparatus manufacturing was also a factor. Manufacturing in the other cities for which data are published showed little change during the period under review in the hourly earnings.

Table 1.- Changes in the Average Earnings of Hourly-Rated Wage-Earners Reported at Oct. 1, 1952, as compared with the same date in preceding years.
