## EXPLANATORY NOTES AND FOOTNOTES

Notes on methods and scope of monthly surveys of hours and earnings and footnotes to tables .....	facing page .....	1
---	-------------------	---

#### EXPLANATORY NOTES.

General.— The monthly statistics of average hours, average hourly earnings and average weekly wages, like those of employment, payrolls and average weekly wages and salaries, are based on data from establishments usually employing 15 persons and over.

Coverage.— Firms are asked to furnish information for the male and female wage-earners for whom they keep records of hours worked, so that the statistics relate, in the main, to hourly-rated wage-earners, or production workers, employed full time and part time. Casual workers are also included. Data for salaried personnel are purposely excluded. In many cases, information is not available for certain classes of wage-earners, whose earnings, like those of most salaried employees, are not directly dependent on the number of hours worked; examples of wage-earners frequently excluded are route-drivers, piece-workers in many but not all establishments, truck men, etc. Numerous employers do not keep record of man-hours for any classes of employees. The number of workers for whom information is given in the present report is therefore smaller than the total number of workers (wage-earners and salaried employees) for whom statistics of employment, payrolls, average earnings, sex distribution, etc., are given in the monthly bulletins on employment and payrolls (Report 8003-501).

In manufacturing, largely represented in the statistics of this report, the data relate to over 75 p.c. of all employees on the staffs of the firms co-operating in the monthly surveys of employment and payrolls; in 1948, the wage-earners for whom information on man-hours was obtained formed over 80 p.c. of the total number of wage-earners reported by practically all manufacturing establishments to the Annual Census of Manufactures, including hourly-rated and other wage-earners. In mining and construction, data on man-hours and hourly earnings are provided for approximately 84 p.c. and 71 p.c. of the total employees of firms co-operating in the monthly surveys of employment and payrolls in those industries, respectively; in 1948, the monthly statistics were based on approximately 89 p.c. and 54 p.c. of the total number of wage-earners reported to the Census of Mining and Census of Construction, respectively.

Man-Hours.— The statistics of man-hours include hours worked by full-time and part-time wage-earners, including overtime hours actually worked; premium or penalty hours credited for purposes of computing overtime payment are not included. Hours credited to wage-earners absent on leave with pay in the reported pay periods are included in the statistics as though the hours had been worked. The averages are obtained by dividing the aggregate hours reported for the week by the number of full-time and part-time wage-earners working such hours.

Wages.— The questionnaire calls for a statement of gross wages earned by the full-time and part-time wage-earners whose hours are reported, before deductions are made for taxes, unemployment insurance contributions, etc. Payments for overtime work, incentive or production, and cost-of-living bonuses paid at regular intervals, and amounts credited to wage-earners on leave with pay in the reported pay periods are included. The value of board and lodging which in some cases is part of the remuneration of workers is not included. Retroactive pay not earned during the reported pay period, and bonuses paid at infrequent intervals are also excluded.

Pay Periods.— Statistics of man-hours and wages reported for periods exceeding one week in duration are reduced by the appropriate proportions to calculate the number of hours and the wages in one week in the stated pay period. Such data are combined with weekly figures furnished by employers whose records are maintained on a weekly basis, so that, in all cases, the tabulated statistics represent the situation in one week in each month.

#### Footnotes.

The following footnotes explain the content of various industrial classes listed in the detailed tables in this bulletin. In some industries, the group breakdown is less extensive than in the Standard Industrial Classification; in these cases, figures for certain categories not shown are contained in the group totals.

- (a) Alluvial gold and auriferous quartz mining.
- (b) Copper-gold-silver; iron; nickel-copper; silver-cobalt; silver-lead-zinc and miscellaneous metal mining.
- (c) Non-metal mining and quarrying; clay and sand pits.
- (d) Miscellaneous wood products.
- (e) Paper boxes and bags; roofing papers; miscellaneous paper products.
- (f) Household, office and store machinery; machine tools; machinery, n.e.s.
- (g) Abrasives; asbestos; hydraulic cement; clay; glass; lime and gypsum; stone; concrete and miscellaneous non-metallic mineral products.
- (h) Buildings and structures; other construction; special trade contractors.
- (i) Interurban bus and coach and urban and suburban transportation systems; taxi-cab and truck transportation; services incidental to transportation; other transportation.
- (j) Hotels and restaurants; laundries, dyeing, cleaning and pressing; business and recreational services.

 (...) figures not available.

MAN-HOURS AND HOURLY EARNINGS, NOVEMBER, 1952.

Statistics for Canada.

Manufacturing.- Hourly-rated wage-earners in manufacturing averaged the same number of hours during the week of Nov. 1 as in that of Oct. 1. The hours in the durable goods division were unchanged, while those in the non-durable goods class showed a fractional decline of 0.1 hours.

The average hourly earnings in manufacturing rose to a new all-time high of 130.9 cents. The durable and non-durable goods divisions both reported increases. In the durable goods division, the most important gain (of 1.6 cents) was in the transportation equipment industry; wage-earners in aircraft factories and shipyards were granted higher wage rates. Much of the increase in the average in the non-durable goods division resulted from changes in industrial distribution of wage-earners and hours as compared with a month earlier, with shorter hours in fish canneries and the lay-off of lower-paid seasonal help in fruit and vegetable canning factories materially contributing. Higher wage rates, however, were granted employees in cotton mills, pulp and paper mills, rubber goods and other industries. The average weekly wages in manufacturing, and in the durable and non-durable goods divisions, were the highest on record.

Non-Manufacturing Industries.- Coal miners received somewhat higher average hourly earnings at Nov. 1 than at Oct. 1. Other branches of the mining industry showed little change. Employment and aggregate hours reported in both building and highway construction declined between Oct. 1 and Nov. 1, with the completion of some large contracts. Partly due to the release of lower-paid workers, there were small increases in the average earnings in both branches of the industry. Hotels and restaurants reported a drop in aggregate hours and fewer wage-earners, largely reflecting the closing of resort hotels. Laundries and dry-cleaning establishments showed little change during the month.

Statistics for the Provinces.

The average hours worked by wage-earners employed in factories in the Atlantic Provinces, Ontario and British Columbia were lower during the week of Nov. 1 than at Oct. 1. In Quebec, Manitoba and Alberta, the average was slightly longer, while in Saskatchewan no change was reported. The largest decrease was in Newfoundland, where wage-earners in fish canneries worked shorter hours. In Alberta, in which the largest increase in the average working week was reported, seasonal activity in sugar refineries and overtime in petroleum refineries accounted for much of the gain.

## AVERAGE HOURLY EARNINGS IN MANUFACTURING IN CANADA AND THE PROVINCES

## AVERAGE HOURLY EARNINGS IN MANUFACTURING IN SPECIFIED METROPOLITAN AREAS

The average hourly earnings in factories in all provinces except Manitoba and Saskatchewan rose between Oct. 1 and Nov. 1. In Manitoba, the average was unchanged. In Saskatchewan, a strike in the iron and steel industry was partly responsible for a decrease of 0.8 cents in manufacturing generally. In Quebec, wage rates for aircraft and shipyard workers increased, and some employers reported the payment of overtime rates on All Saint's Day, which in some cases fell within the pay period for which they furnished statistics. In Ontario, where the largest increase in hourly earnings took place, there were substantial lay-offs of lower-paid seasonal workers in fruit and vegetable canning factories. Upward revisions in wage rates in the pulp and paper and some other industries also contributed. Meat packing plants and petroleum refineries in Alberta reported increased activity, and higher hourly earnings resulted from payment for work performed at premium overtime rates. In British Columbia, the continued upward trend in earnings was largely due to short time in fish canneries and to the release of lower-paid seasonal employees in fruit and vegetable canning factories, with changes in the industrial distribution of hours and wage-earners also a factor.

In Quebec, Ontario, Manitoba and Alberta, the weekly wages rose between Oct. 1 and Nov. 1. In the other provinces the averages fell, largely reflecting shorter hours of work.

Statistics for the Metropolitan Areas.

Hourly-rated wage-earners in factories in Windsor and Vancouver worked shorter hours during the week of Nov. 1 than in that of Oct. 1. The working week remained the same in Hamilton. In the other cities for which man-hours are published, there were small increases in the number of hours worked. In Windsor, shorter hours were worked in the automotive industry in some establishments during inventory.

The hourly earnings rose in 4 of the cities for which statistics are published in Table 9. In Winnipeg, there was no change in the general average and in Vancouver, there was a decline of 0.6 cents, largely because of short time in a number of industries. In Montreal, upward revisions in wage rates were reported in aircraft factories, meat-packing plants and certain other industries. In Toronto, wage-earners in the iron and steel industry, aluminum goods manufacturing and aircraft and other factories received wage-rate increases. In Hamilton, heightened activity in the transportation equipment industry caused higher hourly earnings.
