EXPLANATORY NOTES AND FOOTNOTES

Notes on methods and scope of monthly surveys of hours and earnings and footnotes to tables	facing page	1
---	-------------------	---

EXPLANATORY NOTES.

General.— The monthly statistics of average hours, average hourly earnings and average weekly wages, like those of employment, payrolls and average weekly wages and salaries, are based on data from establishments usually employing 15 persons and over.

Coverage.— Firms are asked to furnish information for the male and female wage-earners for whom they keep records of hours worked, so that the statistics relate, in the main, to hourly-rated wage-earners, or production workers, employed full time and part time. Casual workers are also included. Data for salaried personnel are purposely excluded. In many cases, information is not available for certain classes of wage-earners, whose earnings, like those of most salaried employees, are not directly dependant on the number of hours worked; examples of wage-earners frequently excluded are route-drivers, piece-workers in many but not all establishments, truck men, etc. Numerous employers do not keep record of man-hours for any classes of employees. The number of workers for whom information is given in the present report is therefore smaller than the total number of workers (wage-earners and salaried employees) for whom statistics of employment, payrolls, average earnings, sex distribution, etc., are given in the monthly bulletins on employment and payrolls (Report 8003-501).

In manufacturing, largely represented in the statistics of this report, the data relate to over 75 p.c. of all employees on the staffs of the firms co-operating in the monthly surveys of employment and payrolls; in 1948, the wage-earners for whom information on man-hours was obtained formed over 80 p.c. of the total number of wage-earners reported by practically all manufacturing establishments to the Annual Census of Manufactures, including hourly-rated and other wage-earners. In mining and construction, data on man-hours and hourly earnings are provided for approximately 84 p.c. and 71 p.c. of the total employees of firms co-operating in the monthly surveys of employment and payrolls in those industries, respectively; in 1948, the monthly statistics were based on approximately 89 p.c. and 54 p.c. of the total number of wage-earners reported to the Census of Mining and Census of Construction, respectively.

Man-Hours.— The statistics of man-hours include hours worked by full-time and part-time wage-earners, including overtime hours actually worked; premium or penalty hours credited for purposes of computing overtime payment are not included. Hours credited to wage-earners absent on leave with pay in the reported pay periods are included in the statistics as though the hours had been worked. The averages are obtained by dividing the aggregate hours reported for the week by the number of full-time and part-time wage-earners working such hours.

Wages.— The questionnaire calls for a statement of gross wages earned by the full-time and part-time wage-earners whose hours are reported, before deductions are made for taxes, unemployment insurance contributions, etc. Payments for overtime work, incentive or production, and cost-of-living bonuses paid at regular intervals, and amounts credited to wage-earners on leave with pay in the reported pay periods are included. The value of board and lodging which in some cases is part of the remuneration of workers is not included. Retroactive pay not earned during the reported pay period, and bonuses paid at infrequent intervals are also excluded.

Pay Periods.— Statistics of man-hours and wages reported for periods exceeding one week in duration are reduced by the appropriate proportions to calculate the number of hours and the wages in one week in the stated pay period. Such data are combined with weekly figures furnished by employers whose records are maintained on a weekly basis, so that, in all cases, the tabulated statistics represent the situation in one week in each month.

Footnotes.

The following footnotes explain the content of various industrial classes listed in the detailed tables in this bulletin. In some industries, the group breakdown is less extensive than in the Standard Industrial Classification; in these cases, figures for certain categories not shown are contained in the group totals.

- (a) Alluvial gold and auriferous quartz mining.
 - (b) Copper-gold-silver; iron; nickel-copper; silver-cobalt; silver-lead-zinc and miscellaneous metal mining.
 - (c) Non-metal mining and quarrying; clay and sand pits.
 - (d) Miscellaneous wood products.
 - (e) Paper boxes and bags; roofing papers; miscellaneous paper products.
 - (f) Household, office and store machinery; machine tools; machinery, n.e.s.
 - (g) Abrasives; asbestos; hydraulic cement; clay; glass; lime and gypsum; stone; concrete and miscellaneous non-metallic mineral products.
 - (h) Buildings and structures; other construction; special trade contractors.
 - (i) Interurban bus and coach and urban and suburban transportation systems; taxi-cab and truck transportation; services incidental to transportation; other transportation.
 - (j) Hotels and restaurants; laundries, drying, cleaning and pressing; business and recreational services.
- (..) figures not available.

MAN-HOURS AND HOURLY EARNINGS, DECEMBER, 1952.

Statistics for Canada.

Manufacturing.- Hourly-rated wage-earners in manufacturing worked slightly longer hours during the week of Dec. 1 than in that of Nov. 1. The average working week in the durable goods division increased by 0.5 hours, while in non-durable goods manufacturing there was an insignificant rise of 0.1 hours.

The average hourly and weekly earnings reached a new all-time high in manufacturing, and in the durable and non-durable goods divisions. In the durable goods division, the seasonal lay-off of lower-paid casual employees in saw and planing-mills and increased activity in several transportation equipment industries, where industrial disputes, inventory-taking and steel shortages had affected the situation at Nov. 1, were partly responsible for the higher earnings reported. Wage-rate increases in a number of industries were also a factor of some importance.

In the non-durable goods division, upward revision in wage rates in the tobacco, pulp and paper, printing and publishing and other groups were partly responsible for the advance. Substantial curtailment of employment among lower-paid casual workers in fruit and vegetable canning factories also contributed.

Non-Manufacturing Industries.- In metal mining, wage-rate increases, notably in British Columbia, and work at premium overtime rates resulted in a new maximum in the hourly earnings in that industry. Earnings in non-metallic mineral mining were also higher.

Seasonal curtailment in employment for casual and other lower-paid workers in building construction was largely responsible for an increase of 2 cents in the average hourly earnings in the industry generally. In highway construction, fewer wage-earners were employed, the average working week was shorter, and there was a small decline in the hourly rate.

Statistics for the Provinces

The average hours of hourly-rated wage-earners employed by the larger manufacturers in all provinces were longer during the week of Dec. 1 than in that of Nov. 1. The biggest increase was in Newfoundland, where pulp and paper mills and transportation equipment manufacturers reported longer hours. In Nova Scotia, an increase was shown in the transportation equipment and wood products industries. Wage-earners in meat packing plants in Saskatchewan worked longer hours. The gains in the other provinces were small.

There were increases in hourly and weekly earnings in all provinces during the pay period under review. In Newfoundland, where the largest gain took place, there were important wage-rate revisions in the pulp and paper industry. Wage-earners in

AVERAGE HOURLY EARNINGS
IN
SPECIFIED MANUFACTURING INDUSTRIES, CANADA 1945-1952

shipyards and pulp and paper mills in Nova Scotia received pay increases and work at premium overtime rates was reported by some establishments in the transportation equipment industry. Changes in industrial distribution affected the situation in New Brunswick, where there were seasonal lay-offs in fish-packing establishments and saw and planing mills. In Quebec, upward revisions in wage-rates were granted in tobacco processing establishments. Changes in industrial distribution were also a factor in Quebec, with settlement of disputes in shipyards, and seasonal declines in employment in saw and planing mills. Overtime was reported by some establishments, notably in the printing and publishing industry. Wage rates were increased in pulp and paper mills in Ontario during the period under review. Lay-offs of lower-paid casual help in canning factories and sawmills, and higher hours and employment in the relatively highly-paid automotive industry, which had been reduced during inventory-taking in the week of Nov. 1, also tended to raise the general level of earnings in manufacturing. In British Columbia, there were substantial reductions in the number of lower-paid casual workers in fish and fruit and vegetable canneries. Increased wage rates were paid by iron and steel products manufacturers, printers and publishers, and certain other employers. The advances in hourly earnings in the Prairie Provinces generally were small.

Statistics for the Metropolitan Areas

The average earnings and hours worked in manufacturing in all cities for which statistics are published in this bulletin were higher in the week of Dec. 1 than in the preceding survey. The largest advance in hourly earnings was reported in Vancouver, partly reflecting the employment of greater numbers of more highly-paid wage-earners in industries affected by steel shortages at Nov. 1. Wage rates were increased in the printing and publishing, iron and steel products and certain other industries in that city. In Montreal, the settlement of labour-management disputes resulted in greater employment and higher earnings in shipbuilding. Establishments in the iron and steel products industry reported more premium overtime work; a reduction in the standard work week with the same take-home pay in some establishments also contributed to the general increase in manufacturing in Montreal.

The most important change in hours occurred in Windsor, where a return to more usual conditions was reported in automobile plants, in which inventory-taking had been under way in the week of Nov. 1.

Table 1.- Changes in the Average Earnings of Hourly-Rated Wage-Earners Reported at Dec. 1, 1952, as compared with the same date in preceding years.
