EXPLANATORY NOTES AND FOOTNOTES
Notes on methods and scope of monthly surveys of hours and eamings and footnotes to tables

## EXPLANATORY NOTES.

#### Abstract

General.- The monthly statistios of avarage hours, average hourly earnings and average weekly wages, lika those of employment, payrolls and average weokly wages and salaries, are based on data from astablisharis usually employdng is persons and over.

Coverage.- Pirms are asked to furnish information for the male and fomale wage-arnors for whom they kop records of hours worksd, so that the statistics relate, in the main, to hourly-rated wage-oarners, or production workers, employed fuli time and part-time. Casui morkers are also inoluded. Data for salarled personnel are purposely oxcluded. In many oases, information is not sailable for cortain classes of wagoearners, whose exmings, like those of most salaried employees, are not directly dependent on the number of hours worked; examplos of wage-earners frequently oxoluded are route-drivers, pioce-workers in many but not all establishments, truok mon, otc. Numerous omployers do not koop reoord of man-hours for any olases of employees. The number of workers for whan information is given in the present report is therefore smaller than the total mamber of workers (wage-earners and salaried employess) for whom statistios of amployment, payrolls, average oarnings, sox distribution, etc., are given in the monthly bulletine on oxployment and payrolls (Report 8003-501)

In manufaoturing, largoly represontod in the statistios of this roport, the date rolato to over 75 p.o. of all amployses on the staffs of the firms co-operating in the monthly arreyn of amploynant and payrolles in 1948, the wage-earners for whom information on man-hours mas obtainad formod over 80 p.o. of the total number of wage-earnors reported by practically all mamfaoturing establishments to the Anmul Consus of Manufactures, including hourly-rated and othor wage-arners. In mining and oonstruotion, data. on man-hours and hourly earnings are provided for approximataly 84 p.0. and 71 p.o. of the total employeea of firms co-operating in the monthly survoys of omployment and payrolis in those industries, respeotivelys In 1948 , the monthly statistics were based on approximately $89 \mathrm{p} . \mathrm{c}_{\text {. sud }} 54 \mathrm{p} . \mathrm{c}$. of the total number of wage-sarners reported to the Consus of Mining and Census of Construction, respeotively.

Man-Hours. - Tha statistics of man-hours inolude houre worked by full time and part-time wage-arnors, including overtime hours actually worked: promium or penalty hours oredited for purposes of computing overtime peyment are not included. Hours oredited to wage-oarmers absent on leave with pay in the reported pay periods are included in the statistics as though the hours had been worked. The avorages are obtained by dividing the aggregate hours reported for the weok by the number of full time and part-time wage-arners working such hours.

Wages. - The questionnaire alls for a statemant of gross wages oarmed by the full time and parttime wage-ararners whose hours are reported, before deductions are made for taxes, unemployment insurance contributions, oto. Payments for overtime work, inoentive or produotion, and cost-of-lifing bonuses paid at regular intervals, and amounts crodited to wege-osmers on lesve with pay in the reported pay poriods are included. The velue of board and lodging which in some cases is part of the remuneration of workers is not included. Rotrcactive pay not earned during the reported pay period, and bonusos pald at infrequent intervals are also exoluded.

Pay Pariods, - Statistios of man-hours and wagea reported for periods axceoding one weok in duration are reduoed by the appropriate proportions to calculate the number of hours and the wages in one waek in the stated pay period. Suoh data are combined with meokly figures furnishod by omployers whone reoorde ere maintained on weokly bssis, so that, in all cases, tho tabulatod statistics represent the situstion in on woek in each month.

## Footnotes.

The following footnotes explain the content of various Industrial classes liatod in the dotailed tables in this bulletin. In some industries, the group breakdown is less extonsive than in the Standard Induatrial classiflcations in theso cases, figures for cortain oategories not shown are oontained in the group totals.
(a) Alluvial gold and auriferous quartz mining.
(b) Copper-gold-silver; iron; nickel-copper; silvermoobalt; silver-lead-ainc, and miscellanoous metal mining.
(o) Non-metal mining and quarrying, clay and sand pits.
(d) Miscellaneous wood products.
(o) Paper boxes and bags; roofing papers; míscellanoous paper products.
(f) Housohold, office and store machinery: machine toolss maohinery, n.e.s.
(g) Abrasives, asbestos, hydraulic cement, clay, glass, lime and gypsum, stono, oonorete and miscollaneous mon-motallic mineral products.
(h) Buildings and structares, other construction, and speoisl trade oontractors.
(1) Interurban bus and coach and urban and subarban tranaportation systoms; taximob and truok transportations services incidental to tramportation, and other transportation.
( $j$ ) Hotels and restaurants, laundries, dyeing, cleaning and pressing, business and recreational services.
(..) figures not available.

## Statistics of Canada

Manufecturing - In general, the changes observed in hours and hourly eaminge in the week ending Fob. 1, 1952, reflect a return to more normal conditions than wore reported for the holiday week onding on or about Jsn. 1, when reduced hours in many instances, and premium overtime work in others, had affected the situation.

The manufacturing figures reveal a general rise of $\$ 4.36$ in the average of weekly wageg, mainly as a result of an increase of 3.4 hours in the length of the work week average hourly oarnings rose only fractionally. As compared wth Feb. 1, 1951 , however, hourly earninge were up 16.8 oents, to 127.2 cents.

Durable Goods. - In this subgroup, as in the manufacturing group as a whole, the higher wages in the weok onding Feb. I were due largely to longer hours. The iron and steel industries showed a signiflcant Increse in hour ly oarnings, with rise of 2.4 ceats from 1400 onts at Jan. $1 \%$ this 1520.4 oents (or $16.7 \mathrm{p} . \mathrm{c.}^{\prime}$ ) above Fob. 1, 1951. There were also somo upward wage adjustments in transportation equipment. Wood products and elootrioal apparatus and supplies showed mall inoreases in hourly oarninge, while nonforrous metal products showed a frectional decline.

Non-Durable Goods. Average hourly eaminge in the non-durable goods group fell off slightly, but, reflecting a return to mere normal worling hours, average weokly wages rose by $\$ 3.32$, to $\$ 47.59$, compared with $\$ 43.11$ at Feb. I in the previous year. There wore changes of minor proportions as compered with Jan. I in the verious industries under this group; hourly oernings in the food and beverages subgroup as a whole tumed downard, largely due to geasonal and other changes in the distribution of the wage earners and hours reported. Fractional incrases were noted in the hourly earnings in olothing factories. Average weokly wages in paper products reached $\$ 64.30$ in the wook under reviow. up $\$ 3.29$ from Jan. 1 , as the result of a longer work week in the period under review.

There mes further alight rise in the average orgnings in the textile industries, in wich the Fob. 1 hourly figure was 9.1 conts above its level a year ago: since then, employment has oonsiderably declined. In the interval, wage rates in a number of establishments have moved up, but it should be noted that on important factor in the higher everages recently indicated has been the release of lower pald helpe

## Statistics for the Provinoes.

In British Columbia, the slight decrease indioated in average hourly oarnings of wage-asmors in pulp and paper mills was result of less overtime worked in the woek of Feb. l; the earnings reported a month earlier had been raised by overtime at promium rates. The hourly average in saw and planing milis showed an advanoe of 2 oents in the week of Feb. 1 , partly due to a reduction in casual help; the Jan. I figure, howver, had been affected by short time work in the holiday wesk, when adverse westher had also been a factor. There were increases in the wage-arners and the hours in the canned and cured fish industry in British Columbia; since the now employess were paid at lower rates than those on the regular payroll, the general average of hourly earnings in the industry slightly declined. Hourly earnings in the food and beverages group as a whole were seasonally lower in the wesk ending Feb. 1 than in the previous month, but were more than 20 cents above the hourly oarnings at Fob. 1, 1951. Hourly oarnings of hourly-rated wageearners in iron and steel in general rose 3.6 cents, to 167.3 cents at Feb. 1 , due mainly to wage increases in primary iron and stesl.

The hourly earnings of minere in Alberta, during the wook of Fob. 1 , wore 2.5 conts lower than at Jan. 1 , when overtime at premium rates in the holiday week had raisec the average: coal miners' weekly wages rose in the month under review, due entirely to an inorease in the length of the working wevk, the average of hourly earnings being unchanged. A decrease in the number of lower paid wsge-oarners in olothing With the concomitant increase in the proportion of higher paid people had the offoct of raising average hourly oarnings in the industry.

Average weekly wages in general manufacturing in Saskatchewan rose moderately in the week of Feb. 1, because of a slightly longer working weok and fractional increase in average hourly osrnings. The rood and beverages group showed the ame upward movement in hours and hourly oarnings. In the buildinge and struotures and highways, bridges and street conetruction groups, there were significant increases in hourly earnings; this was brought about partly by a docilne in the number of lower pald wage-arners, and partly by emincresse in the houre worked.

In Manitobs's manufacturing industries as a whole, the average working week was 2 hours longer than in the holiday wek of Jan. 1 and the averago weokly wages rose by $\$ 1.74$; on the other hand, thers was a freotional drop in the hourly average. With an increase in employment among women, ordinarly employed at lower rates of pay than men, there was a raduction in the average hourly oarnings in the clothing group. Food and beverages showed a drop in hours, but a rise in hourly oamings, while wage increases and overtime
CENTS

holped to boost hours and hourly orrning in iron and steel. The seasomal release of a number of lower-paid wage-earnors in buildings and struotures in this province was a prime factor in an inorose of nearly 3 conts in the average hourly earnings in that industry.

In manufacturing in Ontario, there was fractional rise in hourly earnings, but with longer working hours than in the holiday weok, the average weokly wages rose by $\$ 4.71$. In the iron and steel induetry, employing a significant proportion of all wago-eamers in manfacturing in Ontario, there were numerous wage incresses, and the hours returned to more usull lovel. While there was some premium overtime work. As a result of these factors, the average hourly oarninge mounted by 2.7 cents, and the wookly wages by $\$ 6.24$. Longer hours and fractionally higher hourly oarnings wore indicated in clothing. In motal mining, a drop of 4.5 conts in the averago hourly earnings partly resulted from reduced bonus payments, but lessened premium overtime work as compered with the week of Jan. 1, coatributed. These factore were also reflected in the figures for the mining group which showed drop of 5 conts in the average hourly esmings. The hours of work in the wook onding Fob. I for employees in buildinge and structures were substantially higher than in the holiday wook of jan. 1, and avorago hourly ammings wore slightly up; similar trends were noted in highways,bridges and street construction, although the increese in average hours was not so marked.

The decine in hourly eamings in general manufaoturing in Queboc wes manly due to changes in the industrial distribution of hours worked, offsetting the offoct of som wage inoresses, notably in printing, publishing and allisd incustries. In that group, some overtime and a reduotion in the muber of women also contributed to the rise of 3.4 conts.

The small increase in average hourly oarnings in Now Brunswick' manufacturing group, was mainly the result of changes in the industrial distribution of hours worked. Employees in the buildings and structures and highways, bridges and street construction groups worked longer hours at highor rates of pay, resulting in an incresse in average hourly earnings in eaoh category and in the constraotion composite.

## Statistics for the Citios.

In each of the 6 cities for which deta are publishod in this bulletin, the average hours worked in manufacturing during the wook of Feb. 1 rose substantially; there re increases in hourly earnings in Toronto, Findsor and Vancouver, but decreases in Montreal, Hamilton and Winnipeg. The advanoe in average hourly earnings in Toronto was mainly duetoa larger proportion of hours worked in the highly-paid iron and steol and olectrical apparatus and supplies groups of industries, although number of upward adjustrents in wage rates played a part. Iron and steal hourly earnings in Windsor inoreased by slightly over 3 conts, partly due to greater overtime work the work maok was longer than in the holiday week of Jan. 1 and the average wookly wages rose by $\$ 7.44$.

A substantial inorease in the number of womon woriding in the loather produots industry oaused a small decrease in average hourly earnings in Montroal, while revised ago schodules, avertime and the reloase of some wom in printing, publishing and allied industries raised hourly earnings in that industry.

The decline reoorded in hourly earninge in mampecturing in Hemilton mes pertly the result of changes in the distribution of hours reported. A drop of 11.4 conts was shom in transportation equipment in that city, largely oaused by the lay-off of considorable number of highly paid wage-arners due to a materials shortage. In Windsor, employees in the construotion industries received over 3 oents an hour less than in the preoeding month: the drop in the building and struatures component resultod fram an increase in hours at lower-than-averago ratas.

The seasomal employment of woven as oasual workers lowered average hourly earnings in printing, publishing and allied industries in Wimipeg, where ohanges in the proportion of hours worked in various industries contributed to the reduction in the general average in manufacturing as a whole. Wage increases and a decline in the number of women raised hourly earnings in the paper produots group in Vanoouver. A fairly substantial rise took place in averago hourly earnings in wood products, as a result of longer hours at higher-than-average ratos.

Table 1.- Changes in the Average Earnings of Hourly-rated Wage-earners Reported at Feb. 1, 1952, as compared with the same date in preceding years.
