# MAN-HOURS AND HOURLY EARNINGS 

MARCH, 1952

## DOMINION BUREAU OF STATISTICS

## Department of Trade and Commerce

## Published by

Authority of the Rt. Hon. C. D. Howe
Minister of Trade and Commerce

Prepared in
Employment Section of the Labour and Prices Division, Dominion Bureau of Statistics, Ottawa

## CONTENTS

TEXTUAL SUMMARY ..... 1
TABLES

1. Changes in the Average Barnings of Hourly-rated Wage-earners Reported at Mar. 1, 1952, as compared with the same date in procoding years ..... 3
2. Average Hours and Average Hourly and Weakly Wages of Hourly-rated Wago-earners, Canada, by Industry ..... 4
AVERAGE HOURS AND AVERAGE HOURLY EARNINGS OF HOURLY-RATMD WAGE-EARNERS IN:
3. Manufacturing, Canada ..... 5
4. Specified Non-Manufacturing Industries, Canada ..... 6
5. Manufacturing, Provinces ..... 10
6. Manufacturing Metropolitan Areas ..... 12
7. Specified Industries, Provinces ..... 14
8. Specified Industries, Metropolitan Areas ..... 17
INDEX NUMBERS OF AVERAGE HOURLY EARNINGS IN:
9. Heavy Electrical Machinery and Equipment Industry ..... 18
AVERAGE WEEKLY WAGBS OF HOURLY-RATED TLAGE-EARNERS IN:
10. Manufacturing, Canada and Provinces ..... 19
11. Manufacturing, Metropolitan Areas ..... 20
EXPLANATRRY NOTES AND FOOTNOTES
Notes on methods and scope of monthly surveys of hours and earnings and footnotes to tables ..... 1

General.- The monthly statistics of average hours, average hourly aarnings and average weekly wages, lice those or employment, payrolls and average weokly wages and salaries, are based on data from astablishmants usually omploying 25 persons and over.

Coverage.- Firms are asked to furnish information for the male and female wage-aarmers for whom they keop records of hours worked, so thet the statistics relate, in the main, to hourlymated wage-oarners, or production workers, employad full time and part-time. Casual woriors are also included. Data for salaried personnel are purposely oxcluded. In many cases, information is not availablo for oortain classes of wageoarners, whose earaings, like those of most salaried employees, are not directly dependent on the number of hours worked; examples of wageearners frequently oxoluded ere route-drivers, piece-morkers in many but not all establishments, truok men, oto. Numarous employers do not keep reoord of man-hours for any olases of omployess. The number of workers for whon information 18 given in the present report is therefore smaller than the total mumber of workers (wage-arners and salaried omployees) for whom statistios of oryloymont, payrolls, average oamings, sex distribution, etc., aro given in the monthly builetins on employmant and payrolls (Report 8003-501)

In manufaoturing, largely represented in the statistics of this report, the data relate to over $75 \mathrm{p} . \mathrm{c}$. of all employees on the staffs of the firms co-operating in the monthly arveys of employment and payrol1s; in 1948, the wage-arners for whom information on man-hours was obtained formed over 80 p.c. of the total number of wage-earners reported by practioally all manufacturing establishments to the Annual Census of Manufactures, including hourly-rsted and other wage asmers. In mining and construction, data on man-hours and hourly oarninge are provided for approximately $84 \mathrm{p} . \mathrm{c}$. and 71 p .0 . of the total aployeos of firms oo-operatigg in the monthly surveys of omployment and peyrolis in those indurtries, respectivelys in 1948 , the monthly statistics were based on approximately $89 \mathrm{p} . \mathrm{c}$. and $54 \mathrm{p} . \mathrm{c}$. of the total number of wage-arners roported to the Consus of Mining and Census of Construotion, respeotively.

Man-Hours. - The statistios of man-hours inciude hours worked by full time and part-time wage-arners, including overtine hours actually workeds promium or pensity hours oredited for purposes of computing overtime payment are not included. Hours credited to wage-earners absent on leave with pay in the reported pay pemods are included in the atatistics as though the hours had been worbed. The averages are obtainod by dividing the aggregate hours reported for the weok by the number of fill time and part-time wage-arnors woriding such hours.

Weges.- The questionnaire calls for a statemst of groas wages earmed by the full time and parttim wage-earners whose hours are reported, before deduotions are made for taxes, unemployment insurance oontributions, to. Payments for overtime work, incentive or production, and cost-of-1iving bonuses paid at regular intervals, and amounts credited to wage-arners on leave with pay in the reported pay periods are included. The value of board and lodging which in some cases is part of the remumeration of workere is not included. Retrosctive pay not earned during the reported pay period, and bonuses paid at infrequent intervalo are also oxoluded.

Pay Periods. - Statistios of man-hours and wages reported for periods excesding one meok in duration are reduced by the appropriate proportions to calculate the number of hours and the wages in one weok in tho stated pay period. Such data are combined with weokly Ifgures furnished by employers whose rocords are maintained on a weokly basis, 80 that, in all cases, the tabulsted statistics represent the situation in on wook in each month.

## Footnotes.

The following footnotes explain the content of various industrial olsses ilsted in tho detailed tablos in this bullotin. In some industries, the group breakdown is less extensive than in the Standard Industrial Classification; in these cases, figures for certain categories not shown are oontained in the group totals.
(a) Alluvial goid and auriforous quartz mining.
(b) Copper-gold-silver; iron; nickel-copper; silver-cobalt; silver-lead-rino, and miscellanoous motal mining.
(c) Non-motal mining and quarrying, clay and sand pits.
(d) Miscellaneous wood products.
(0) Paper boxes and bags; roofing papers; miscollaneous paper products.
(f) Housohold, office and store machinery; machine tools; machinery, noe.s.
(g) Abrasives, asbestos, hydraulic coment, clay, glass, 11 mo and gypsum, stone, conorote and miscellaneous non-mataliic mineral products.
(h) Buildings and structures, other construction, and spooisl trade oontraotors.
(1) Interurban bus and coach and urban and suburban transportation systems; taxi-cab and truck transportations services incidental to transportation, and other transportation.
(j) Hotels and restaurants, laundries, dyeing, cloaning and pressing, business and recreational services.
(..) figurea not available.

# MAN-HOURS AND HOURLY EARNINGS, MARCH, 1952. <br> Statistics for Canuda 

Manufacturing. - On the whole, the chances in hours and hourly earnings reported between the weeks of Feb. 1 and Mar. 1 were small. The average hours showed an insignificant increase of 0.1 hours, the average hourly earnings were 0.7 cents higher, and there was a rise of 42 cents in the average weekly wages. The latest hourly rate was 127.8 cents, 16.4 conts above its level a year earlier.

Durable Goods. - Wage wearners emploved in factories manufacturing durable goods worked an average of 41.8 hours during the week of Mar. 1, 1952, 0.1 hours less than at Fob. 1. The average hourly earnings increased by 0.9 cents to a new maximum of 138.4 cents. The latest figure was 18.5 cents above the Iar. 1, 1951, average. The Fob. 1 - Lar. 1 advarice was partly due to greater activity in the transportation equipment and iron and steel industries. The averago weekly wages rose by 24 cents, to $\$ 57.85$.

Non-Durable Goods.- The average hours worked by wage-earners reported in the non-durable goods industries at Kar. 1, 1952, were 0.3 hours longer than at Feb. 1 , largely due to lengthened hours in leather goods and clothing establishments. The average hourly earnings increased by 0.3 cents, to 116 cents, 13.7 cents above the Mis. 1, 1951, level. The averape weekly wages were 47 cents more than at Feb. 1. An advance of 3.5 cents an hour in the printing and publishing industry was the most important change observed; this partly resulted from wage-rate revisions in Ontario, and overtime worked at premium rates in quebec.

Non-Manufacturing Industries.- Higher ware rates in metal mining and in the ooal mines of Alberta, with shortened working hours at the same pay in asbestos mines, resulted in a 2.1 cent increase in the hourly rate in mining as a whole. Nage-earners in building and highway conetruotion worked longer hours in the week of Mar. 1 than in that of Feb. 1, with slightly higher hourly earnings. The hourly earnings in construction averaged 129.7 cents, 15.6 cents above the level at Nar. 1, 1951. Average hourly earnings in the service industry rose by 1.3 cents at Mar. 1 as compared with a month earlier, due partly to wage-rate revisions in hotels.

## Statistics for the Provinces

The provincial variations in the average hourly earnings of hourly rated wage-oamers in manufacturing were generally small botween Feb. 1 and Mar. 1. In Uuebec and Alberta no change was reported on the whole. In Newfoundlard, the average dropped by 0.2 cents; in the other provinces, there were small increases, varying from 0.9 cents in Nova Scotia to 1.2 cents in New Brunswick and Saskatchewan.

The average hours worked in factories in the week of liar. l were slightly lower in Nem Brunswick and Ontario than at Feb. 1. The other provinces reported a longer working weok, the increases ranging from 0.1 hours in Mritish Columbia, to 1.1 hours in Newfoundland. In the month, there were small advances in the average weekly wages in all provincos excopt New Brunswick. The increases varied from 32 cents in Ontario to $\$ 1.30$ in Newfoundland. The decline in New Brunswick mounted to \$1.29.

In Newfoundland, the minor fall in hourly earmings was due to changes in the industrial distribution of the wage-earners reported and to the employment of additional wage-carners at slifhtly lower rates of pay in the transportation equipment industry. $\Lambda$ rise of 3.4 hours in the average working week in fish processing plants was largoly responsiulo for the higher weekly wages in manufacturing as a whole.

In Nova Scotia, increased hours in the fish packing industry were largely offet by a shorter working week in saw and planing mills and other industries. Upward adjustments in wage rates in the shipbuilding industry contributed to the higher hourly earnings reported in mamfacturing generally.

In New Brunswick, shorter working hours in fish processing plants, saw and planing mills, pulp and paper mills and other industries were largely responsible for a decline of l. 6 hours in the average working week in manufaoturing as a whole. The increase in hourly earninge was partly due to ohanges in the industrial distribution of the wege-aarners reported.

In quebec, the changes in the general averages were small. Higher hourly earnings were reported in the tobacco industry, because of the laymoff of lower-paid casual help. Reduced production bonuees in certain cotton mills were reflected in a small decline in the average hourly earnings in the textile goods industries.

Higher wage-rates in the metal mining industry reaulted in a rise of 3.3 cents in the average hourly earnings, while a 10.4 cent increase in non-metallic mining was associated with the inauguration of a shorter working weok with the same pay in asbestor mines.

In Ontario, the most important changes reported in manufacturing resulted from wagerato increases in pulp and paper mills and in the motor vehicles industry. In the nonmanua froturing classes, higher earnings were reportod in gold mines, due to revisions in rates and higher bonuses. In hanitoba, seasonal layoffs of lower-paid employees in printing and publishing firms, sugar refineries and meat packing plants were largely responsible for a minor increase in average hourly earnings in manufacturing.

An increase of 1.2 cents in the average hourly earnings in manufacturing in Saskatchewan largely reflected changes in the industrial diatribution of the wageaarners reported. Payment for work at premium overtime rates resulted in a rise of 4 cents an hour in the average hourly earnings in building construction as a whole in that province. In Alberta, there was little general change. Among the industries, overtime at premium rates was reported in the iron and steel industry; hourly earnings in meat packing plants were also highor. Increased employment and longer hours were indicatod in clothing factories and in saw and planing mills. In coal mining, general rovisions in the wage ratos resulted in a rise of 9.6 cents in the average hourly earnings as compared with a month earlier.

In British Columbia, the payment of higher wage-rates in saw and planing mills and shipyards contributed materially to the general increase of 1.1 cente in average hourly earnings in manufacturing betwoon $F o b$. 1 and Mar. 1.

> Statistics for the Cities.

In each of the 6 cities for which data are published in this bulletin, the average hourly arnings of wage=earners in manufacturing were higher at Mar. 1 than at Feb. l. The increases ranged from 0.1 cents in Montreal to 4.0 cents in Findsor. The average hours worked rose by 0.5 hours, 0.1 hours and 0.4 hours, respectively, in liontreal, Toronto and Winnipeg. In Hamilton, Windsor and Vancouver, the average working week was somewhat shorter. The average weekly wages were higher than a month in hontreal. Toronto and Wimipeg. In the other cities for which data are published, there were small decreases in the average weekly wages, warying from 37 cents in Vancouver to 55 cents in Windsor.

The 1.6 cent increase in hourly earmings in manufacturing in Toronto partly resulted from higher wage rates and overtime in the printing and publishing, industry, with greater activity in the transportation equipment and iron and steel industries.

Increased wage-rates in the motor vehicle industry were largely responsible for a rise of 4.0 cents in the general average in manufacturing in Windsor. A shorter workine, week in a number of industries lowered the city average by $l_{.} 4$ hours; the average weekly wages fell by 55 cents. Changes in industrial distribution and lay-offs of lower-paid casual help in the food industries and in printing and publishing were contributing factors to the 1.3 cent increase in average hourly earnings in manufacturing in Winnipeg.

Wage-earners emploved in factories in Vancouver earned, on the average, 1.5 cents more per hour in the week of Mar. I than in the weok of Feb. l. Adjustments in wagerrates in meat packing plants ${ }^{\text {and }}$ saw and planing mills and increased activity in the transportation equipment and iron and steel industries were factors.

Table 1.- Changes in the Average Earnings of Hourly-rated Wage-earners Reported at Mar. 1, 1952, as compared with the same date in proceding years.
