## EXPLANATORY NOTES.

Genoral.- The monthly statistics of average hours, average hourly earnings and average woekly wages, like those of employment, payrolle and average weekly wages and salaries, are based on data fram establishments usually omploying 15 persons and over.

Coverage. Firms are asked to furnish information for the male and female wagearnors for whom they keep records of hours worked, so that the statistics relate, in the main, to hourly-rated mage-arners, or produotion workers, employed full time and part time. Casual workers are also included. Data for alaried personnel are purposely oxcluded. In many cases, information is not aveilable for certain olasser of wageearners, whose earnings, like those of rost salaried employees, are not direotly dependent on the number of hours worked: examples of wage-arners frequently excluded are route-drivers, piece-workers in many but not all establishments; truck men, to. Numerous employers do not keep reoord of man-hours for any classes of employees. The number of workers for whom information is given in the present report is therefore smaller than the total number of workers (wage-armers and salaried employees) for whom statistios of employment, payrolls, average earnings, sex distribution, otc., are given in the monthly bulleting on employment and payrolls (Report 8003-501).

In manufacturing, largely represented in the statistics of this report, the data relato to over 75 p .0 . of all employees on the staffs of the firms co-operating in the monthly surveys of employment and payrolls: in 1948, the wage-arners for whom information on man-hours was obtained formed over 80 p.c. of the total number of wage-arners roportod by practically all manuracturing establishnents to the Annual Census of Manufactures, including hourly-rated and other wege-earners. In mining and construotion, data on man-hours and hourly earnings are provided for approximately $84 \mathrm{p} . \mathrm{c}$. and $71 \mathrm{p} . \mathrm{c}$. of the total employees of firms co-operating in the monthly surveys of employment and parrolis in those industries, respectivelys in 1948, the monthly statisttcs were based on approximatoly $99 \mathrm{p} . \mathrm{c}$. and $54 \mathrm{p} . \mathrm{C}$. of the totel number of wage-arners reported to the Census of Mining and Census of Construction, respectively.

Mar-Hours. - The statistics of man-hours include hours worked by full-time and part-time mage-arners, including overtime hours actually worked; premium or penalty hours credited for purposes of computing overtime payment are not included. Hours credited to wage-earners absent on leave with pay in the reportod pay periods are included in the statistics as though the hours had been worked. The averages are obtained by dividing the aggregate hours reported for the week by the number of full-time and partmime wage-arners working such hours.

Wages. - The questionnaire calls for a statement of gross wages arned by the full-time and part= time wage-tarners whose hours are reported, before deductions aro made for taxes, unemployment insurance contributions, etc. Payments for overtime work, incentive or production, and cost-of-living bonuses paid at regular intervals, and amounts credited to wage-earners on leave with pay in the reported pay periods are included. The value of board and lodging which in some cases is part of the remumeration of workers is not included. Retroactive pay not oarned furing the reported pay period, and bonuses paid at infrequent intervals are also excluded.

Pay Periode. - Statistics of men-hours and wages reported for periods exceoding one week in duration are reduced by the appropriate proportions to calculate the number of hours and the wages in one week in the stated pay period. Such data are combined with weekly figures furnished by emplovers whose reoorde are malntained on a wookly basis, so that, in all cases, the tabulatod statistios represent the situation in one weok in each month.

## Footnotes.

The following footnotes explain the cortent of verious industrial classes listed in the dotailed tables in this bullotin. In some industries, the group breakdom is less extensive than in the Standard Intustrial classification; in these cases, figures for certain categories not shown are contained in the group totals.
(a) Alluwial gold and auriforous quartz mining.
(b) Copper-gold-silver; iron; nickelmeopper; silver-cobalt; silver-lesd-zinc and miscollaneous motal mining.
(o) Non-metal míning and quarrying clay and sand pits.
(d) Miscollaneous wood products.
(s) Paper boxes and bags; roofing papors; miscellaneous paper products.
(f) Housohold, office and store machinerys machine tools; machinery, n.e.s.
( ) Abrasives; asbestos; hydraulic cement; clays glass; lime and gypsum; stone; concrete and miscellaneous nom-metallic mineral products.
(h) Buildings and structures; other construction; epeoial trade oontrators.
(1) Interurban bus and coach and urban and suburban transportation systams; taxi-oab and truck transportation; services incidental to transportation; other transportation.
(j) Hotels and restaurants, laundries, dyoing, cleaning and prossing, business and reoreationel services.
(..) figures not available.

```
MAN-HOURS AND HOURLY EARNINGS, JUNE, 1952.
```

## Statistics for Canada

Manufacturing.- The average hourly earnings of hourly-rated wage-aarners in the larger manufacturing establishments reached a new maximum of 129.7 at June 1 . With a reduction of half an hour in the length of the working week, however, the average weekly wages were 52 cents lower than a month earlier. The widespread observance of the Victoria Day holiday was an important factor in lowering the working hours in many establishments; industrial disputes in some areas contributed.

Durable Goods.- The average working time in factories manufacturing durable goods was 0.7 hours shorter in the weak of June 1 than in that of May 1, partly because of industrial disputes, notably in the automotive industry. There was a fractional increase in the average hourly earnings, the 33rd in succession. Upward revisions in wage rates were reported in electrical apparatus, primary iron and steel and some other industries.

Non-durable goods.- Average hourly earnings in non-durable goods manufacturing rose by 0.6 cents at June 1, to a now maxdmun of 118.4 cents. The average hours were slightly reduced, partly as a result of the holiday. Lower average earnings were reported in a number of industries in the food and beverage group, partly due to increased employment of lower pald casual workers, and partly because of declines in the cost-ofliving bonus in the meat packing industry. Overtime premium payments were reported in printing and publishing and a number of other industries as a result of the Victoria Day holiday, and there were wage-rate increases in sugar and oil refineries, and some other factories.

Non-Manufacturing Industries - Marked seasonal expansion was roported in both branches of the construotion industry. The average hourly earnings were slightly lawer, largely because of increased employment in the lower paid occupational categorios. In highway construction, the average hours reported were significantly higher, while in building the working week was somewhat shorter. Industrial disputes, notably in Nova Scotia, and the observance of the holiday were factors.

Wage-aarners employed by local transportation companies earned somewhat higher hourly earnings at June 1 than at May 1 , partly because of further wagerate increases and partly because of premium payments made for work performed on May 24. The average hourly earnings in hotels and restaurants dropped by 0.9 oents during the month, roflecting the addition of lower paid seasonal help to staffs of summer hotels.

## Statistics for the Provinces.

From Nova Scotia to Ontario, the average hours worked during the woek of June 1 by wage-earners in manufacturing establishments were somewhat shorter than a month earlier, while in Newfoundland and the Testern Provinces, the average working week was slightly higher than in the week of May 1 . The averago hourly earnings increased in Nowfoundland, Quobec, Manitoba, Alborta and British Columbia, but olsowhere, the goneral averages were slightly lower.

In Newfoundland, longer hours with premium rates paid for overtime work, together with wage-rate increases in fish packing establishments and higher earnings in the transportation equipment industry raised the general averago of hourly oarnings in marufacturing, as compared with May 1 , but the figure was somewhat lower than in the first 4 months of the year. The average weekly wages, however, were the highest on record.

The reduction in hours in mining was largely due to a mechanical breakdow. Building construction showed a marked seasonal increase in activity, and the average wages paid were decidedly higher.

In Nova Sootia, the average hours and earnings in manufacturing generally were lower, largely due to a sharp decine in hours in fish packing establishments, with lower hourly earnings because of reduced overtime work. The situation in the building industry was seriously affected by industrial disputes.

Larger staffs of lower-paid casual employees in the fish packing industry and other changes in industrial distribution lowered the average hourly earnings in manufacturing in New Brunswick by 2.7 conts.

In Quebec, wage-rate increases were reported in sugar and ofl refineries, brickyards and certain other industries, while premium overtime payments tonded to raise the hourly rate in printing and publishing and some other establishments. Labour-management disputes in cotton mills continued an unfavourable factor in the period under review. mployment, hours and wages showed substantial seasonal increases in the lumber industry. Highway construction also reported larger staffs, working longer hours.

In Ontario, the changes in the general averages between May and June were small. Decreased cost-of-living bonuses following a fall in the cost-of-living index, and the employment of larger numbers of women slightly lowered average earnings in meat packing establishnents. Higher oaraings were roported in oil refining and electrical apparatus manufacturing, due in part to upward adjustments in the wage rates. Industrial disputos in the motor vehicle group resulted in curtailod working hours and wages. The construction industry reportod seasonal expansion in amployment and in aggregate and average hours. Barnings of street railway employees were somewhat higher because of wage increases and payment at premium rates for work performed on May 24.

In Manitoba, as olsowhere, average earnings in the meat packing industry reflocted a drop in the cost-of-living bonus, and the employment of more female help at lower rates of pay. Upward revisions of wage-rates and overtime were reportod in printing and publishing, fron and steel, and paper product manufacturing. The average hourly and woekly earnings of wage-earners in manufacturing generally rose slightly at June 1 , and the working wook was insignificantly longer.

There were substantial seasonal advances in employment, hours and wages in construction in Saskatchewan. In the highway sub-group, increases in the number of lower paid casual help reduced the average hourly earnings. Little change was noted in the general averages of hours and earnings in manufacturing in Alberta. Wage-rate increases were reported in sugar and oil refineries and cortain other industries, but were largely offset by lower earnings in meat packing plants due to the factors already mentionod. Incroased employment of workers at lower rates in summer hotels rosulted in a decline in average hourly oarnings in that industry.

The most important change in British Columbia in the period under reviow was a marked increase in average hours and earnings in the fish packing industry. In manufacturing as a whole the levels of earnings and hours worked were slightly higher than at May 1. Average hourly earnings in metal mining were somewhat lower, reflecting the employment of now employoes at rates rather bolow the averago.

## Statistics for the Metropolitan Areas.

The average working hours in manufacturing in most of the cities for which data are published changed only slightly in the weok of June 1 as compared with a month oarlier. An excoption was windsor, where industrial disputes in the automotive industry caused marked declines in the aggregate and average hours. The average hourly earnings in the 6 cities were somewhat higher than at May 1.
