EXPLANATORY NOTES AND FOOTNOTES

Notes on methods and scope of monthly surveys of hours and earnings and footnotes to tables	facing page
	1

EXPLANATORY NOTES.

General.— The monthly statistics of average hours, average hourly earnings and average weekly wages, like those of employment, payrolls and average weekly wages and salaries, are based on data from establishments usually employing 15 persons and over.

Coverage.— Firms are asked to furnish information for the male and female wage-earners for whom they keep records of hours worked, so that the statistics relate, in the main, to hourly-rated wage-earners, or production workers, employed full time and part time. Casual workers are also included. Data for salaried personnel are purposely excluded. In many cases, information is not available for certain classes of wage-earners, whose earnings, like those of most salaried employees, are not directly dependent on the number of hours worked; examples of wage-earners frequently excluded are route-drivers, piece-workers in many but not all establishments, truck men, etc. Numerous employers do not keep record of man-hours for any classes of employees. The number of workers for whom information is given in the present report is therefore smaller than the total number of workers (wage-earners and salaried employees) for whom statistics of employment, payrolls, average earnings, sex distribution, etc., are given in the monthly bulletins on employment and payrolls (Report 8003-501).

In manufacturing, largely represented in the statistics of this report, the data relate to over 75 p.c. of all employees on the staffs of the firms co-operating in the monthly surveys of employment and payrolls; in 1948, the wage-earners for whom information on man-hours was obtained formed over 80 p.c. of the total number of wage-earners reported by practically all manufacturing establishments to the Annual Census of Manufactures, including hourly-rated and other wage-earners. In mining and construction, data on man-hours and hourly earnings are provided for approximately 84 p.c. and 71 p.c. of the total employees of firms co-operating in the monthly surveys of employment and payrolls in those industries, respectively; in 1948, the monthly statistics were based on approximately 89 p.c. and 54 p.c. of the total number of wage-earners reported to the Census of Mining and Census of Construction, respectively.

Man-Hours.— The statistics of man-hours include hours worked by full-time and part-time wage-earners, including overtime hours actually worked; premium or penalty hours credited for purposes of computing overtime payment are not included. Hours credited to wage-earners absent on leave with pay in the reported pay periods are included in the statistics as though the hours had been worked. The averages are obtained by dividing the aggregate hours reported for the week by the number of full-time and part-time wage-earners working such hours.

Wages.— The questionnaire calls for a statement of gross wages earned by the full-time and part-time wage-earners whose hours are reported, before deductions are made for taxes, unemployment insurance contributions, etc. Payments for overtime work, incentive or production, and cost-of-living bonuses paid at regular intervals, and amounts credited to wage-earners on leave with pay in the reported pay periods are included. The value of board and lodging which in some cases is part of the remuneration of workers is not included. Retroactive pay not earned during the reported pay period, and bonuses paid at infrequent intervals are also excluded.

Pay Periods.— Statistics of man-hours and wages reported for periods exceeding one week in duration are reduced by the appropriate proportions to calculate the number of hours and the wages in one week in the stated pay period. Such data are combined with weekly figures furnished by employers whose records are maintained on a weekly basis, so that, in all cases, the tabulated statistics represent the situation in one week in each month.

Footnotes.

The following footnotes explain the content of various industrial classes listed in the detailed tables in this bulletin. In some industries, the group breakdown is less extensive than in the Standard Industrial Classification; in these cases, figures for certain categories not shown are contained in the group totals.

- (a) Alluvial gold and auriferous quartz mining.
- (b) Copper-gold-silver; iron; nickel-copper; silver-cobalt; silver-lead-zinc and miscellaneous metal mining.
- (c) Non-metal mining and quarrying; clay and sand pits.
- (d) Miscellaneous wood products.
- (e) Paper boxes and bags; roofing papers; miscellaneous paper products.
- (f) Household, office and store machinery; machine tools; machinery, n.e.s.
- (g) Abrasives; asbestos; hydraulic cement; clay; glass; lime and gypsum; stone; concrete and miscellaneous non-metallic mineral products.
- (h) Buildings and structures; other construction; special trade contractors.
- (i) Interurban bus and coach and urban and suburban transportation systems; taxi-cab and truck transportation; services incidental to transportation; other transportation.
- (j) Hotels and restaurants; laundries, dyeing, cleaning and pressing; business and recreational services.

(...) figures not available.

MAN-HOURS AND HOURLY EARNINGS, AUGUST, 1952.

Statistics for Canada

Manufacturing.- The average hours worked by hourly-rated wage-earners in manufacturing were slightly lower in the week of Aug. 1 than during that of July 1. The average hourly earnings increased by 0.4 cents, to 129 cents at the date under review, when the figure was exceeded only by the averages at May 1 and June 1, 1952. The average weekly wages, however, decreased by 9 cents between July 1 and Aug. 1.

Durable Goods.- Wage-earners in establishments manufacturing durable goods earned 1.1 cents per hour more at Aug. 1 than at July 1. The aggregate and average weekly wages paid were also somewhat higher, but the average working week, at 41.2 hours was 0.2 hours shorter than at July 1. Wage-rate revisions were reported in non-ferrous ore refineries and in aluminum goods factories. With the settlement of industrial disputes in the lumber industry in British Columbia, the hourly earnings in saw and planing mills returned to a more usual level, showing an increase of 11.1 cents over the July 1 average. The working hours were lower, however, as the wage-earners returned to work only toward the end of the pay period under review.

Non-durable Goods.- The average working week in factories manufacturing non-durable goods was insignificantly shorter at Aug. 1 than at July 1. There was a slight decrease in the average hourly earnings, partly due to reduced overtime work in certain plants and partly a result of changes in industrial distribution. Employment for casual workers in the food processing industries substantially increased. The termination of labour disputes in some industries was also a factor. The weekly wages averaged \$48.29, 28 cents lower than at July 1.

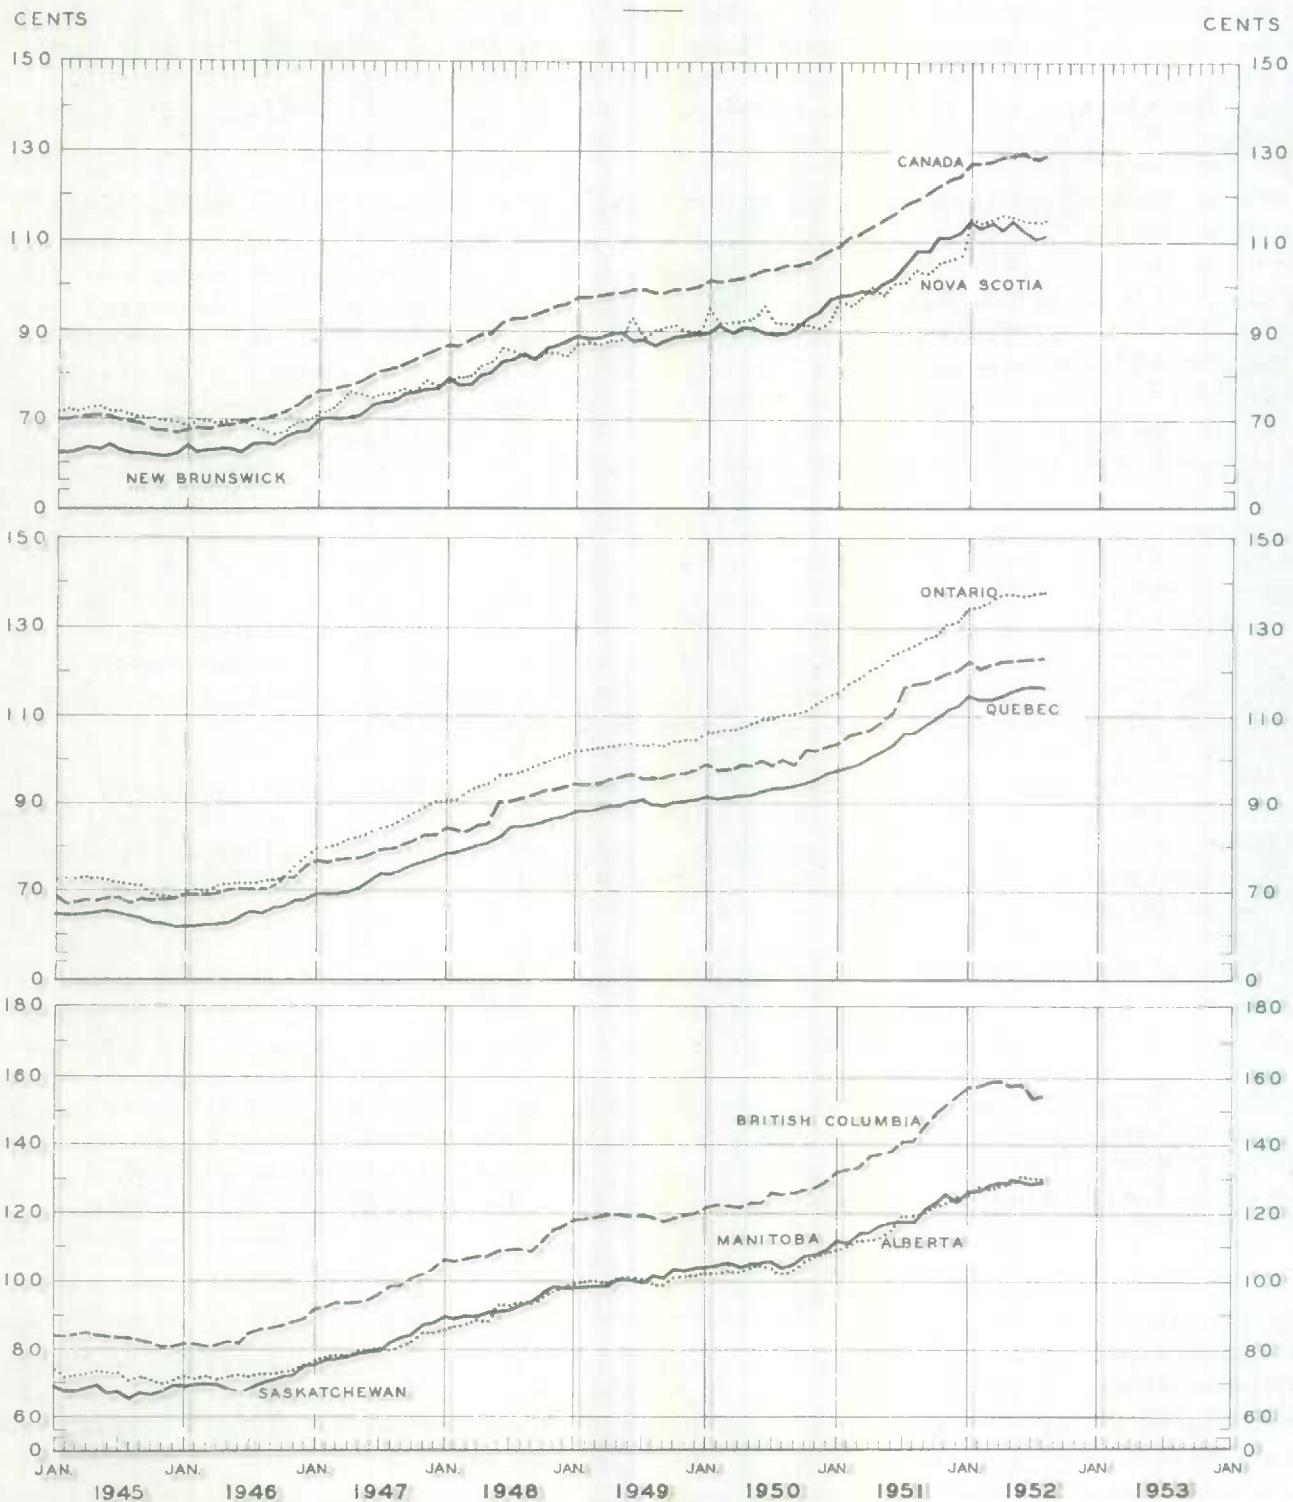

Non-Manufacturing Industries.- The average hours worked, average hourly earnings and weekly wages in the mining industry were slightly lower in the period under review than a month earlier. Shorter hours were worked in the coal mines of Nova Scotia, while oil wells reported less overtime work. Small reductions in the cost-of-living bonus were reported by some metal mines.

In the building construction industry, the aggregate hours worked increased by almost 8 per cent during the period under review. In Nova Scotia, labour disputes which had earlier affected the situation were terminated, with resultant increases in the number of wage-earners reported and in the average hourly earnings. There was an increase of lower-paid casual help in highway construction, notably in Quebec, and the average hours worked and average hourly and weekly wages were lower at Aug. 1 than at July 1. In British Columbia highway construction workers were granted higher wage rates, raising the hourly average by almost 3 cents in that province.

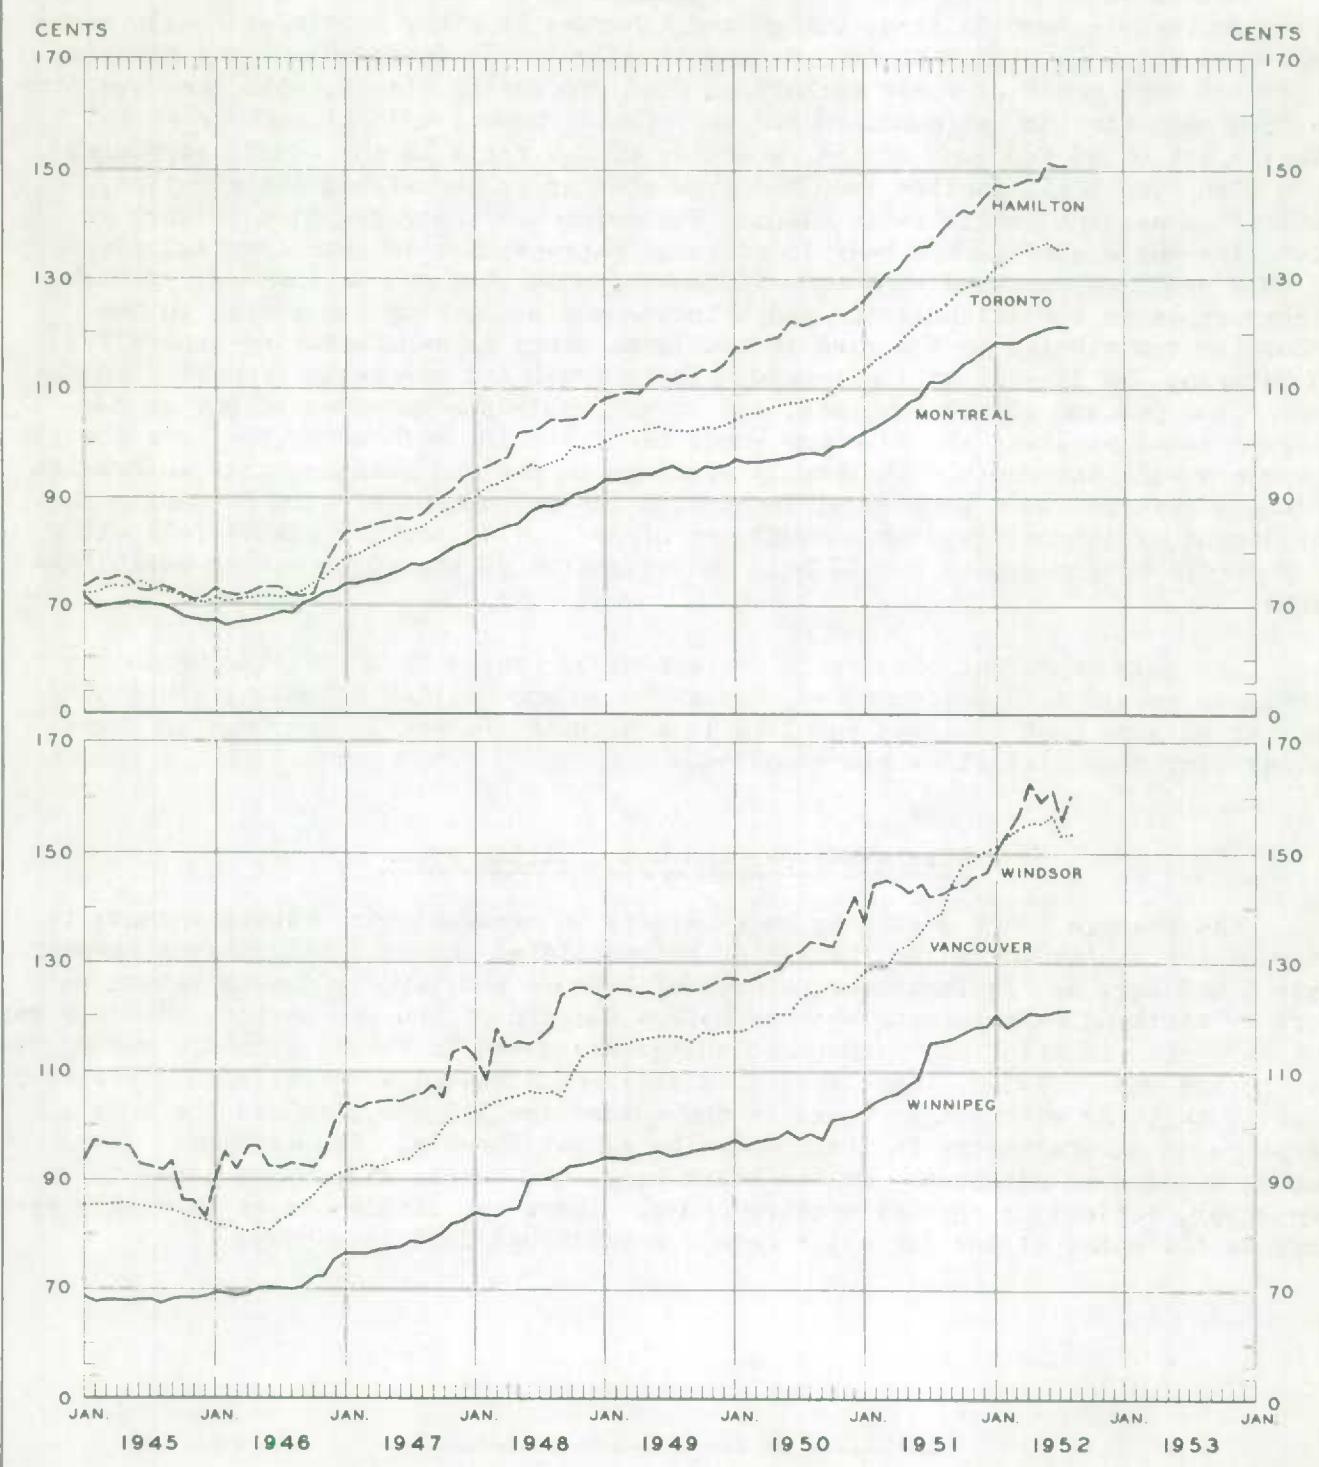

Statistics for the Provinces

The average time worked by wage-earners reported by the co-operating manufacturers for the week of Aug. 1 was somewhat lower than at July 1 in all provinces except Quebec. The greatest decline in hours occurred in British Columbia, where large numbers of wage-earners in the lumber industry returned to work just before

AVERAGE HOURLY EARNINGS IN MANUFACTURING IN CANADA AND THE PROVINCES

AVERAGE HOURLY EARNINGS IN MANUFACTURING IN SPECIFIED METROPOLITAN AREAS

the end of the reported pay period, after a prolonged strike. In Saskatchewan, a reduction of 1.4 in the hours worked in the week was largely the result of less overtime in the meat packing industry. The increase in the length of the working week reported in Quebec was insignificant.

Decreases in hourly earnings of wage-earners in manufacturing establishments were reported in Newfoundland, Quebec and Alberta; in other provinces hourly earnings were slightly higher at Aug. 1 than at July 1. In Newfoundland and Alberta, increased employment of women workers in food processing plants, with less overtime in fish canneries in Newfoundland and in printing houses and oil refineries in Alberta, accounted for much of the reduction of 0.9 cents in the hourly earnings. In Quebec, the small decline resulted from changes in industrial distribution, reflecting seasonal activity in canning factories and the resumption of work in factories where strikes had been in effect. Wage-earners in some chemical plants in this province received wage-rate increases during the pay period under review. Higher rates in the shipbuilding and printing and publishing industries in New Brunswick contributed to the rise in hourly earnings in manufacturing generally. In Ontario, the lay-off of lower-paid help in fruit and vegetable canneries at the end of the pea and strawberry pack, and upward revisions in rates of pay in non-ferrous metal smelting and aluminum goods manufacturing were among the more important changes during the month. The hourly earnings in saw and planing mills in British Columbia returned to a more usual level with the resumption of work following the settlement of labour disputes. Hourly earnings in fish packing plants fell with an increase of lower-paid casual help on the staffs of the co-operating establishments.

The only important changes in average weekly wages in manufacturing in the provinces occurred in Newfoundland, Saskatchewan and British Columbia, where the shorter working week reported resulted in a drop in the weekly earnings of wage-earners for whom statistics are compiled.

Statistics for the Metropolitan Areas

The average hours worked by wage-earners in manufacturing establishments in many of the cities for which statistics are published showed little change between July 1 and Aug. 1. In Vancouver, a drop of 2 hours was largely due to return to work by striking wage-earners shortly before the end of the pay period. Windsor was the only city in which any pronounced change was noted in hourly earnings during the pay period under review. The lay-off of lower-paid casual workers in food processing plants, together with longer hours in the automotive industry, raised the hourly earnings in manufacturing in that centre by almost 5 cents. The average weekly wages also advanced. On the other hand, the weekly wages were lower in Vancouver, reflecting shorter working hours. There was little change in weekly earnings in the other cities for which data are published in this report.

Table 1.- Changes in the Average Earnings of Hourly-Rated Wage-Earners Reported at Aug. 1, 1952, as compared with the same date in preceding years.
