Estimates of Labour Income

May 1959

Wages, salaries, and supplementary labour income for the month of May totalled \$1,481.5 million. This is an increase of \$54.2 million (3.8 p.c.) from the April estimate and \$105.6 million (7.7 p.c.) from the May total of 1958. Normal seasonal influences were prevalent in most industries and the seasonally adjusted total of labour income amounted to \$1,468.2 million, a gain of \$1.0 million or 0.1 p.c. from the previous month. This minor increase represents the net result of offsetting movements throughout the various industries. A comparison of the May industrial totals with the same month of last year indicates that advances were made by all components.

Regions

The labour income totals for each region were substantially higher in May than in the preceding month with normal seasonal effects being evident. The percentage change in each area as compared with May of 1958 was about 7.0 p.c. in the Atlantic Province area, Quebec and Ontario, with gains of 8.8 p.c. in the Prairie Provinces and 10.1 p.c. in British Columbia.

Seasonally adjusted series for the Atlantic and Prairie regions together with British Columbia, declined slightly from April estimates. These decreases, however, were offset by the higher levels recorded for Quebec and Ontario.

Manufacturing

The manufacturing wage bill for May rose by slightly more than 2.0 p.c. in Quebec and Ontario; 4.2 p.c. in British Columbia; and about 5.0 p.c. in the Atlantic and Prairie regions as compared with the April estimates. Advances were also noted for each area between May 1958 and 1959 with increases of just over 4.0 p.c. in the Atlantic Region, Quebec and Ontario. British Columbia was up by 7.9 p.c. and the Prairie Region by 11.0 p.c.

After removing the effects of normal seasonal influences the seasonally adjusted regional estimates were higher than the April totals by 0.6 p.c. in the Atlantic Region and British Columbia; 1.0 p.c. in Ontario and the Prairie Region; and by 1.4 p.c. in Quebec.

NOTES ON THE ESTIMATES OF LABOUR INCOME

Labour income is defined as the total of wages, salaries, and supplementary labour payments made to, or on behalf of, residents of Canada, excluding military pay and allowances. The wages and salaries component, which is specified to include living allowances, bonuses, commissions, and "tips", is measured prior to deductions of all kinds (income tax, employees' contributions to the Unemployment Insurance Fund and to welfare and pension funds, etc.). Both money payments and payments in kind are included in the total. The other component, supplementary labour income, comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the Unemployment Insurance Fund.

The annual estimates of labour income are based in most cases on survey data collected by D.B.S., published accounting records, or information otherwise obtained directly from business or government agencies. In a few cases information is not available for non-census years and projections from census "benchmarks" are made using the best available related indicators. Persons interested in descriptions of sources and methods and of the relationship between labour income and the national accounts are referred to the D.B.S. publication National Accounts, Income and Expenditure: 1926-1956. A separate reference paper dealing with labour income will be released in the near future and will provide additional detailed information of this kind. It will include annual estimates dating from 1926 and monthly or quarterly series from 1947.

The monthly and quarterly income estimates are obtained by applying indicators of short-run change to the estimated annual totals. About four-fifths of aggregate labour income is estimated on the basis of payroll indexes obtained from a monthly survey of establishments normally employing fifteen or more persons (see the D.B.S. monthly publication Employment and Payrolls). For industries not covered by this survey the estimates are based on indexes which are either derived from other sources of payroll information or specially constructed on the basis of related data. A constant number of working days is assumed for each month in order to avoid the effects of differences in numbers of holidays and week-ends.

The most recent monthly or quarterly figures are preliminary and subject to revision in the next issue. In addition, figures for the most recent years are subject to further minor revisions as new annual source materials become available.

The monthly and quarterly figures in this report are presented with one digit after the decimal point, i.e. to the nearest tenth of a million dollars. This is done in order to avoid sudden changes in estimates for small provinces or industries which would occur if the figures were rounded to the nearest million, and it should not be assumed that the estimates are accurate to the nearest tenth of a million.

FOOTNOTES

- (1) Monthly and quarterly figures may not add to annual totals because of rounding.
- (2) Quarterly figures are entered opposite the middle month of the quarter but represent quarterly totals.
- (3) Includes post office wages and salaries.
- (4) Includes Yukon, Northwest Territories, and Canadian residents abroad. The differences between monthly Canada totals and the totals for the ten provinces should not be taken as reliable measures for this group.
