ESTIMATES OF LABOUR INCOME

June, 1959

The total of wages, salaries, and supplementary labour income for June is estimated at \$1,527.8 million. This is an increase of \$44.3 million (3.0 p.c.) from the preceding month and \$120.7 million (8.6 p.c.) from June, 1958.

After the removal of seasonal influences, the seasonally adjusted total of labour income in June rose by \$8.9 million (0.6 p.c.) over the May estimate. This gain was shared by all industries with the exception of the transportation, storage and communication group which was down by 0.3 p.c. from May.

A preliminary total for the second quarter of 1959, adjusted for seasonal variation, is estimated at \$4,416.5 million, an increase of \$60.2 million (1.4 p.c.) as compared with the first quarter. Retroactive wage payments made in the early months of the year had a slight effect on the quarterly change, but most industries recorded a slower rate of increase than was evident in the first quarter.

The finance and service group (including government service), seasonally adjusted, was higher by just over 2.0 p.c. in the second quarter as compared with the first quarter of 1959. Transportation, storage and communication declined by 1.6 p.c.; however, after adjustments are made to exclude the retroactive wage payments paid to railway employees in January, 1959, this group increased by 1.1 p.c.

Construction was up 2.0 p.c. followed by mining (1.7 p.c.), public utilities (1.5 p.c.), manufacturing (1.3 p.c.) and trade (1.1 p.c.). Forestry remained unchanged between the first and second quarters. Manufacturing wages and salaries, seasonally adjusted, in the second quarter experienced gains of about 0.5 p.c. in Ontario and British Columbia; 1.5 p.c. in the Atlantic provinces; about 2.5 p.c. in the Prairie provinces and almost 3.0 p.c. in Quebec.

Continued advances in employment and per capita earnings contributed to this latest rise in the seasonally adjusted labour income estimates.

Summary of Changes in Monthly Income Estimates

	Percentage Changes Unadjusted		Percentage Changes Seasonally Adjusted			
	May /59 to June/59	June/58 to June/59	Feb./59 to Mar./59	Mar./59 to Apr./59	Apr./59 to May/59	May /59 to June/59

NOTES ON THE ESTIMATES OF LABOUR INCOME

Labour income is defined as the total of wages, salaries, and supplementary labour payments made to, or on behalf of, residents of Canada, excluding military pay and allowances. The wages and salaries component, which is specified to include living allowances, bonuses, commissions, and "tips", is measured prior to deductions of all kinds (income tax, employees' contributions to the Unemployment Insurance Fund and to welfare and pension funds, etc.). Both money payments and payments in kind are included in the total. The other component, supplementary labour income, comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the Unemployment Insurance Fund.

The annual estimates of labour income are based in most cases on survey data collected by D.B.S., published accounting records, or information otherwise obtained directly from business or government agencies. In a few cases information is not available for non-census years and projections from census "benchmarks" are made using the best available related indicators. Persons interested in descriptions of sources and methods and of the relationship between labour income and the national accounts are referred to the D.B.S. publication National Accounts, Income and Expenditure: 1926-1956. A separate reference paper dealing with labour income will be released in the near future and will provide additional detailed information of this kind. It will include annual estimates dating from 1926 and monthly or quarterly series from 1947.

The monthly and quarterly income estimates are obtained by applying indicators of short-run change to the estimated annual totals. About four-fifths of aggregate labour income is estimated on the basis of payroll indexes obtained from a monthly survey of establishments normally employing fifteen or more persons (see the D.B.S. monthly publication Employment and Payrolls). For industries not covered by this survey the estimates are based on indexes which are either derived from other sources of payroll information or specially constructed on the basis of related data. A constant number of working days is assumed for each month in order to avoid the effects of differences in numbers of holidays and week-ends.

The most recent monthly or quarterly figures are preliminary and subject to revision in the next issue. In addition, figures for the most recent years are subject to further minor revisions as new annual source materials become available.

The monthly and quarterly figures in this report are presented with one digit after the decimal point, i.e. to the nearest tenth of a million dollars. This is done in order to avoid sudden changes in estimates for small provinces or industries which would occur if the figures were rounded to the nearest million, and it should not be assumed that the estimates are accurate to the nearest tenth of a million.

FOOTNOTES

- (1) Monthly and quarterly figures may not add to annual totals because of rounding.
- (2) Quarterly figures are entered opposite the middle month of the quarter but represent quarterly totals.
- (3) Includes post office wages and salaries.
- (4) Includes Yukon, Northwest Territories, and Canadian residents abroad. The differences between monthly Canada totals and the totals for the ten provinces should not be taken as reliable measures for this group.
