October	86	323	82	265	244	36	1,036

xIncludes Newfoundland, since 1949. \*Includes retroactive wage payment to railway employees.

## ESTIMATES OF LABOUR INCOME

October 1954

Total labour income received by Canadian wage and salary earners in October was estimated at \$1,036 million, an increase of \$6 million from the previous month. The October estimate was \$24 million or 2.4 per cent above that of the corresponding month in 1953. This relative gain was slightly higher than the one of 1.9 per cent for a comparison of the first 10 months of 1953 and 1954; the respective figures for these periods were \$9,677 million and \$9,857 million.

Small advances in total wages and salaries, ranging between \$2 million (for the primary and distributive groups of industries) and \$4 million (for construction) took place during the month of October. A large part of the increases resulted from the seasonal growth of activity in logging, residential building and trade. The total for finance and services remained unchanged from September, and that for manufacturing declined \$3 million. It was noted that aggregate payrolls declined in such industries as leather products, wood products, iron and steel products and transportation equipment in the provinces of Ontario and Quebec. Some close-downs of plants due to industrial disputes and lay-offs for model change-over of motor cars contributed to the decline in iron and steel products and transportation equipment.

The latest monthly survey of employment and payrolls of the larger firms in non-agricultural industries indicated that total wages and salaries increased moderately during October in the provinces of Prince Edward Island, Quebec, Ontario, Saskatchewan and Alberta.

The Consumer Price Index (1949=100) of 116.8 for November 1 stood at the same level as that for the preceding two months, and compared with 116.2 for November 2, 1953.

## Components of Labour Income

Estimates of total labour income include all wages, salaries and supplementary remuneration for employees' services. Gross earnings--before deductions for income tax, unemployment insurance and pension contributions--are used in the calculation of wages and salaries, and include bonuses and commissions as well as allowances for food, clothing and living accommodation where these are provided by the employer. Employers' contribution to unemployment insurance, workmen's compensation, pensions and welfare are shown as supplementary labour income.

## Methods of Estimation

The monthly estimates of total wages and salaries are projections from annual estimates; these projections are based mainly on the indexes of aggregate payrolls for major industries, compiled by the Bureau's Employment Section. Federal and provincial government payroll statistics collected by the Public Finance and Transportation Division are incorporated; and various employment and wage rate data are used to compute monthly estimates for other industries. The annual estimates of labour income are compiled from original sources within the Dominion Bureau of Statistics and from other statements and reports of governments and business. A full description of the concepts, sources and methods covering the annual estimates is found in the reference document "National Accounts, Income and Expenditure, 1926-1950" (December 1951).

A constant number of working days in each month is assumed in the estimation of monthly labour income. A detailed account of concepts and methods is set out in the bulletin "Wages, Salaries and Supplementary Labour Income in Canada by Months, January 1946 to April 1947", and also in the report "National Accounts, Income and Expenditure by Quarters, 1947-1952" (November 1953).

The figures included in this bulletin supersede those in earlier issues, and those for the most recent years are subject to further minor revisions as new source materials become available.

## Relation to the National Accounts

Labour Income constituted 61 per cent of "Net National Income at Factor Cost" in 1953. The relationship between labour income and other items of the National Accounts can be studied in the bulletin, "National Accounts, Income and Expenditure, 1950-1953" (June 1954).
