HIRING AND SEPARATION RATES IN CERTAIN INDUSTRIES

March 1951 to February 1953.

The basic data for this report are secured from the Unemployment Insurance Commission by means of the Commission's Semi-Annual Report of Hirings and Separations. The report form (required under the National Employment Service Regulations, 1949) is completed by each establishment in Canada having one or more employees insured under the Unemployment Insurance Act and employing, in all, ten or more persons, except that all units of chain and multiple firms are covered regardless of the number employed in a unit. In all, therefore, some 50,000 schedules are completed and returned to the Unemployment Insurance Commission in March and September of each year, the data being supplied, by sex, for each month in the six-month period. The respondent retains one copy, one is kept in the Local Employment Office of the Commission and one sent to the Bureau of Statistics for compilation. In addition to the number of hirings and separations in each month, the report requires the number in the employ of the establishment at the beginning and end of the period as well as at the end of each intervening month.

With regard to employment, respondents are asked to include all persons on the payroll and still in the employ of the establishment at the end of the month, or if more convenient, at the end of the payroll period immediately preceding the month end. Casual employees, defined as those employed for a particular job or jobs of a casual nature for a period of less than six days' duration, are specifically excluded from the report. Part-time employees and those on short time are included among the employed as are those on

strike or locked out unless they have separated from their employment. Employees on temporary lay-off with definite instructions to return to work within thirty days are considered as still on the payroll, and those absent on vacation (with or without pay) or because of sickness, accident or other justifiable reason and who are expected to return to work, are included among those employed.

Since the data are secured from establishments, employees transferred from one establishment to another are generally reported as a separation from the establishment from which they were transferred and as a hiring in the establishment to which they have been transferred. The term "establishment", however, may be taken to include a group of units operated by one firm in an area, so long as the units are engaged in the same kind of business. Thus, a firm operating several chain stores in a city may, if it so desires, submit one report covering those units, and many firms whose payroll records are maintained on an area basis report in this manner. A special arrangement has been made with the chartered banks, which operate many branches, by which transfers from branch to branch are reported separately and are not included as hirings or separations.

For purposes of this survey, hirings then, consist of the number of persons added to a payroll during a period (excluding casual employees) and separations consist of persons whose employment with an establishment has been terminated during a period and whose names have been removed from the payroll either because they have quit; been laid off; discharged; or have separated for miscellaneous reasons such as marriage, retirement or death.

Industrially, the coverage of the survey is coincident with the coverage of the Unemployment Insurance Act with a few exceptions. Establishments having any insured workers complete the form for all their employees and therefore the non-insured in industries coming within the purview of the

Act are included. On the other hand, crews of vessels engaged in water transportation and longshoremen and stevedores are, on the whole, excluded, since the hiring practises of these industries are such that data comparable with those secured for industry in general cannot be obtained from them. Government service (except Crown Companies and certain special boards and agencies such as liquor commissions and hydro-electric commissions) is not included, although plans are now being formulated to obtain employment, payrolls, hirings and separations relating to regular government services. When these data become available they can be included here. It should be noted that the rates shown for "All Industries" on each table refer to the total of all establishments covered, including industries not separately specified in the balance of the table.

The accompanying tables present by sex, for Canada and regions, the number of hirings and separations per 100 persons on the payroll of the establishments covered. Payroll figures used each month are the average (mean) of the numbers on the payroll at the beginning and at the end of the month.

The monthly percentages, then, present gross hiring and separation rates or gross rates of labour turnover in the industries to which they relate. Rates of net labour turnover can be computed by obtaining the positive difference between the two rates. Similarly "replacement rates" can be obtained by using the hiring or separation rate, whichever is lower.

The gross rates of labour turnover which are the subject of the following discussion reflect levels of economic activity and provide a measure of gross worker movements which underlies net changes in employment. Thus a changing volume of economic activity is associated with changing levels of hirings and separations and movements in the overall level of employment

are related to high rates of turnover in certain industries or areas, and low rates elsewhere.

The levels of hirings and separations at different seasons of the year reflect seasonal variations in activity. Active seasons of the year are characterized by a high level of hirings and a low level of separations while during the off seasons the reverse situation applies. Similarly the generally high levels of employment which have been a feature of the post-war years have been associated with relative stability at fairly high levels for both hirings and separations.

In addition to the information obtained from a study of hiring and separation rates separately, the relationship between these two sets of rates provides significant data. Gross movements in employment for separate industries and areas by sex reveal the shifting composition of the working force in each case.

Throughout the period under consideration, the customary seasonal relationships between hirings and separations were observed to exist. Thus from January to March, when the level of employment is normally stable and at a seasonal low, hirings and separations were in balance. Commencing in April and continuing through June, a rise in the level of employment was associated with an excess of hirings over separations. Equality of hirings and separations at a high level of employment was characteristic of the remaining late summer months and continued into the harvest season. This equality of hirings and separations, associated with a somewhat lower level of employment, obtained during October and November, followed by a reduction of hirings in relation to separations in December.

Although seasonal fluctuations in hirings and separations are

common to all industries, the incidence of seasonality is by no means uniform either between industries or industry sub-groups. This fact tends to be obscured in an examination of the rates for "All Industries" because of the large number of persons employed in manufacturing relative to the total of persons covered by the survey. Thus the pattern of hirings and separations for "All Industries" is closely related to the pattern for the manufacturing industry as a whole.

Industries such as construction and forestry and logging exhibit much more extreme fluctuations in both hirings and separations than the total for all industries. The timing of these fluctuations is also in some instances different from the pattern for total all industries. For example, both of the industries mentioned above have hiring and separation peaks which are not identical with the pattern for manufacturing but which are hidden by the fluctuations in the more heavily weighted manufacturing industry.

Within the manufacturing industry as a whole a similar situation exists. Such industry sub-groups as foods and beverages, wood products and to a somewhat lesser extent transportation equipment are highly seasonal in their operations. Balanced against these are industry sub-groups such as printing and publishing, electrical apparatus and supplies and tobacco and tobacco products which exhibit relatively stable patterns of hirings and separations.

Hirings and separations by region also display seasonal patterns related to the economic characteristics of the region. In provinces such as Ontario and Quebec, in which manufacturing occupies an important position, the scope of fluctuations in hirings and separations was less than in the Pacific and Atlantic Regions where primary industries are relatively more important.

1. - Payroll figures used for each month are the average (mean) of the numbers on the payroll at the beginning and at the end of the month.
2. - The number of women employed in the industry is negligible.

1. - Payroll figures used for each month are the average (mean) of the numbers on the payroll at the beginning and at the end of the month.
2. - The number of women employed in the industry is negligible.

Table 3. - Number of Hirings and Separations per 100 Persons on the
Payroll¹ in Selected Industry Groups, for
QUEBEC REGION, March 1951 to February 1953.

Percent of Average Number on Payroll During the Month														No.

1. - Payroll figures used for each month are the average (mean) of the numbers on the payroll at the beginning and at the end of the month.

2. - The number of women employed in the industry is negligible.

1. - Payroll figures used for each month are the average (mean) of the numbers on the payroll at the beginning and at the end of the month.

2. - Includes Northwest Territories.

3. - The number of women employed in the industry is negligible.
