SEMI-ANNUAL

HIRING AND SEPARATION RATES IN CERTAIN INDUSTRIES

SEPTEMBER 1963 TO FEBRUARY 1964

(Compiled from material supplied by the Unemployment Insurance Commission)

*Published by Authority of
The Minister of Trade and Commerce*

DOMINION BUREAU OF STATISTICS

Labour Division

Unemployment Insurance and Pensions Section

January 1965
8004-508

Price: 50 cents—\$1.00 a year

EMPLOYMENT AND EARNINGS REPORTS

Following are other publications of the Labour Division based upon establishment data in the field of industrial employment, earnings and hours:

72-001 — Advance Statement on Employment and Weekly Earnings — Monthly — Price \$1.00 per year

(index numbers of employment and averages of weekly wage and salary statistics for Canada (major industrial divisions) and the provinces (industrial composite figures)

72-002 — Employment and Payrolls — Monthly — Price \$3.00 per year

(industry and area data on industrial employment, payrolls and average weekly wages and salaries)

72-003 — Man-Hours and Hourly Earnings — Monthly — Price \$3.00 per year

(industry and area averages of hours per week, hourly and weekly wages, with comparisons from a month and a year earlier, and certain historical comparisons; charts and explanatory material)

72-005 — Estimates of Labour Income — Monthly — Price \$2.00 per year

(monthly or quarterly estimates of wages, salaries and supplementary labour income, both unadjusted and seasonally adjusted, for specific industries and regions; with annual totals from 1947)

72-201 — Review of Employment and Payrolls — Annual — Price \$1.00

(industry and area index numbers of employment and payrolls and average weekly wages and salaries, monthly and annually, over a lengthy period; charts and explanatory material)

72-202 — Review of Man-Hours and Hourly Earnings — Annual — Price 75 cents

(industry and area averages of hours per week, hourly and weekly wages, monthly and annually, from 1945; charts and explanatory material)

72-203 — Earnings and Hours of Work in Manufacturing — Annual — Preliminary Report — Price 25 cents

(separate figures of earnings and hours for men and women and for wage-earners and salaried employees in one week in autumn for major manufacturing industries, Canada, and manufacturing in provinces and larger metropolitan areas)

72-204 — Earnings and Hours of Work in Manufacturing — Annual — Final Report — Price 75 cents

(separate figures of earnings and hours for men and women and for salaried employees and wage-earners in one week in autumn from 1946 with industrial and area detail; charts and explanatory material. Special data are obtained on a rotational basis in successive years:

- (1) a segregation of office and clerical workers from the salaried group
- (2) a distribution of wage-earners and salaried employees in a given range of weekly earnings and
- (3) a distribution of wage-earners in a given range of hours worked in the survey week)

*Remittances should be in the form of cheque or money order,
made payable to the Receiver General of Canada and forwarded to
the Publications Distribution Unit, Financial Control Section,
Dominion Bureau of Statistics, or to the Queen's Printer, Ottawa,
Canada.*

HIRING AND SEPARATION RATES IN CERTAIN INDUSTRIES

SEPTEMBER 1963 TO FEBRUARY 1964

This report deals with measures of the gross movements of workers into and out of employment with employers of Canadian establishments required to make returns in the semi-annual survey of hirings and separations conducted by the Unemployment Insurance Commission. While the survey makes available statistics on hiring and separation rates, it has been designed mainly for the operational use of the National Employment Service in measuring manpower requirements, in planning and evaluating job placement programs, and calculating the extent of use of their facilities by employers (for the country).

Size and Coverage of Survey

Employers required to make reports are those operating single establishments and employing 10 or more employees in total, and employers operating more than one establishment regardless of the number of employees, excluding in both cases establishments with no insurable employees. Industrially, then, the coverage of the survey is virtually coincident with the coverage of the Unemployment Insurance Act. However, the Hiring and Separation survey is more comprehensive in that hiring and

separation rates are based on total employment, insured and non-insured, in establishments where any employees are covered by unemployment insurance. Exceptions are crews of vessels engaged in water transportation and longshoremen and stevedores. This is because the hiring practices of these industries are such that data comparable with those secured from other industries can not be obtained. Government Service, except Crown Companies and certain special boards and agencies such as liquor commissions and hydro electric commissions, is not yet included.

The number of reports received for the current semi-annual survey covering the period from September 1963 through February 1964 was some 70,400 and the number of employees reported was 3,342,300. The number of employees was about 65 per cent of the average number of paid workers with jobs reported in the Canadian labour force survey¹ for the first three months of 1964. For industries other than agriculture and service, the coverage is quite high even though small firms are not required to report.

¹ Labour Force Survey Special Table, Special Surveys Division, DBS.

TABLE A. Coverage of U.I.C. Labour Turnover Survey, February 1964

Industry Group	Number of establishments or branches in survey	Employed paid workers		
		Total reported	Per cent female	Per cent of employed paid workers covered
Agriculture	242	3,945	23.4	5.6
Forestry, fishing, trapping	1,081	49,205	2.0	79.0

¹ Excludes some consolidated reports, not allocated to a region.

Collection Procedure

Information is collected semi-annually on U.I.C. Form 847. Reporting periods cover March to August and September to February. On the top of the form, space is provided for firm name, address, nature of business, name of owner, if different, and address of the office completing the report. In the body of the form, employment is reported at the beginning and end of the six-month period, together with hirings and separations during each month, and the number employed at the end of each intervening month—male and female separately. Instructions and definitions are printed on the reverse side of the form.

Report forms are prepared in triplicate. The respondent retains one copy, another is kept in the Local Employment Office of the Commission, and the other is sent to the Bureau of Statistics for compilation.

Industrial Classification

The Standard Industrial Classification of 1948 is used in the Industry Tables.

Definitions

The **rate of labour turnover** is defined as being equal to either the hiring or separation rate whichever is lower. During expansions of employment the hiring rate exceeds the separation rate, hence turnover is equated with the separation rate. The excess hirings constitute a growth of employment characteristic of economic expansion. During contractions of employment the separation rate exceeds the hiring rate, hence turnover is equated with the hiring rate. The excess separations constitute a decline of employment characteristic of economic contractions.

An **establishment** should be distinguished from a firm or department. A firm may own or operate several establishments, each of which may produce a product quite different from the others. The establishment, in turn, may be composed of departments carrying on dissimilar activities. An establishment may be considered for the survey as an office, plant, factory, works, premises or place, where one or more employees are covered by unemployment insurance.

Casual employees are those workers engaged for a particular job or jobs of a casual nature for periods of six working days or less. They are excluded from the U.I.C. survey. However, employees engaged for continuous periods of seven or more working days, even if the work is of a casual nature, are not considered casuals for the purpose of the survey.

Part-time employees engaged to work only part of the normal working day or week and **short-time employees**, those who because of industrial conditions have been placed on a work schedule less than the normal day or week, are included in the survey. But if part-time employees are considered to fall within the class of casuals they are excluded from the survey.

Employees on **strike** or **locked out** are considered as still employed except where replaced by other workers. Employees **temporarily laid off** with

definite instructions to return to work within 30 days are considered still on the payroll. If the employee quits or is dismissed within this period, however, a separation is recorded.

Employees absent from work because of **sickness** or **accident** or other justifiable reasons with intent of reinstatement are considered still on the payroll until such time as they may quit or be dismissed. Employees on paid or unpaid **vacation** are considered on the payroll.

Employees on **transfer** from one area to another are considered separations at the point from which transferred and hirings at the point to which they are transferred. However, reports from more than one establishment may be consolidated by a firm where these establishments are located within the same city or town and operating in the same line of business. Thus, a firm operating several chain stores in a city may submit one report covering these stores. Many firms whose payroll records are kept on an area basis report in this manner.

Hirings for the survey consist of additions to the work force during a period (excluding casuals) whether of new or rehired employees. **Separations** or terminations of employment consist of persons (excluding casuals) whose employment has ended with an establishment and whose names have been removed from the payroll. Separations are not distinguished by type, such as quits or voluntary separations, discharges, indefinite layoffs and other miscellaneous involuntary separations.

Regions have the following geographical breakdown: Atlantic—Newfoundland, Prince Edward Island, Nova Scotia, New Brunswick, Magdalen Islands; Quebec—province excluding Magdalen Islands; Ontario—that part of province, east of a north and south line drawn about 250 miles east of Port Arthur; Prairie—the balance of the province of Ontario, Manitoba, Saskatchewan, Alberta and the Northwest Territories; Pacific—province of British Columbia including the Peace River Block and the Yukon Territory.

Notes on Current Statistics

Monthly averages of hiring, separation and labour turnover rates are given below for the years 1948 to 1963. The rate of labour turnover is defined as being equal to either the hiring or separation rate whichever is lower.

The hiring rate exceeds the separation rate during economic upturns; during downturns the reverse is true. This is to be expected since an increase in employment, which accompanies economic expansions, can only be brought about by an excess of the hiring rate over the separation rate.

A trend towards a considerable decline in the labour turnover rate between 1948 and 1963 is evident. The average monthly rate has dropped from 7.7 in 1948 to 5.9 in 1963. A number of factors have contributed to this. The spread of job security provisions in contracts limiting the employer's right of arbitrary discharge is one factor. Fringe

TABLE B. Hiring, Separation and Turnover Rates

Year	Average monthly		
	Hiring rate ¹	Separation rate ¹	Turnover
1948	7.8	7.7	7.7
1949	6.8	6.9	6.8
1950	7.4	6.9	6.9
1951	7.9	7.6	7.6
1952	7.5	7.2	7.2
1953	6.9	6.9	6.9
1954	6.5	6.6	6.5
1955	6.9	6.4	6.4
1956	7.4	6.9	6.9
1957	6.7	6.9	6.7
1958	6.0	6.1	6.0
1959	6.3	6.2	6.2
1960	6.0	6.2	6.0
1961	6.0	5.9	5.9
1962	6.2	6.0	6.0
1963	6.2	5.9	5.9

¹ Per 100 persons on the payroll.

benefits depending on years of service, e.g., pensions, is another. Moreover, the industries which experienced the highest rates of growth of employment in recent years, such as trade, public utilities, finance, insurance and real estate and some sectors of service, are the industries which have a relatively low rate of turnover.

All these factors tending to reduce the rate of turnover are probably less prevalent in the Atlantic Provinces than elsewhere. Therefore, from the early 1950s to the early 1960s labour turnover rates have declined most in the Pacific, Quebec and Prairie regions and least in the Atlantic provinces and Ontario. In the Atlantic provinces this is reflected in a rate of turnover which is still well above the Canadian average. In Ontario, on the other hand, the small decline must be related to the fact that the turnover rate was already substantially below the national average in the early 1950s.

The monthly pattern in hiring and separation rates during the 12 months ending in February 1964, conformed, with three exceptions, to the experience in the last decade. Thus, hiring rates usually increase in January, in the three months March to May and in September. In 1963 the hiring rate also increased in November.

The increased hiring rate in January is due to the seasonal expansion in employment following the slow down towards the end of the year. From March to May, the spring expansion of general economic activity accounts for the rise in the hiring rate. Higher employment in forestry, in car manufacturing due to the model change and in retail trade at the end of the vacation period results in an increased hiring rate in September.

The separation rates increase from May to September and in November and December. From May to September, increases in the separation rate take place in trade and service and in some manufacturing industries, especially among women. This conforms to known trends, i.e., married women tend to withdraw from the labour force during the school vacation period. The general decline in economic activity towards the end of the year results in rises in the separation rate in November and December. In 1963 there was also an increase in the separation rate in March; in April, on the other hand, where there was a decline over the 10-year period, the rate of separation was unchanged in 1963.

These fluctuations in the monthly hiring and separation rates are most pronounced in the Eastern regions partly because some of the seasonally affected industries are of relatively greater importance there. Moreover, particular industries such as forestry, manufacturing and construction are, in some instances, subject to greater monthly variations in hiring and separation rates in the East than in the rest of the country.

The hiring rate exceeded the separation rate during the 12 months (Table D), for men and women, in each region and in each major industry group. This was especially marked in the Pacific and Central regions, in service, trade and manufacturing, and for women.

TABLE C. Comparison of Normal and Actual Month-to-month Changes in Labour Turnover

Month	Rate	Hirings		Separations		
		Per cent change from previous month		Rate	Per cent change from previous month	
		Actual	Normal ¹		Actual	Normal ¹
1963—March	5.0	19.0	16.8	4.8	2.1	-

¹ Payroll figures used for each month are the average (mean) of the numbers on the payroll at the beginning and at the end of the month.

² The number of women employed in the industry is negligible.
