EXPLANATION OF THE METHOD USED IN PREPAR ING THE MONTHLY STATISTICS OP EMPLOYMETTI AND PAYROLIS.

The monthly survoys of employment and payrolls extend to all branohes of the following industries: manufacturing, logging, mining, commications, transportation, construction and maintenance, trado and finance; the ostablishments for which data aro given under the hoading "sarvices" are chiefly hotels and restaurants and laundries and dry-cleanimg plants. For practical reasons of colloction and tabulation, the survays are in the min limitod to firms usually omploying 15 persons and over. Firms reducing their staffs bolow this minimum are not necessarily removed from tho mailing list. Establishmonts aro askod to furnish data for all olassos of omployoas irrespective of their functions in the business, but to oxclude statistics for the owners. Employers operating in two or more iines of business, or in different provinces or cities, are asked to furnish separate monthly returns for their ostablishments in the different industries and areas.
1.- COVNRAGE - The virtual limitation of the monthly surveys to establishments having 15 employeos or moro rosults in a rolatively even roprosentation of omployment in the various provinces and in the larger cities for which data are sogrogated, but also results in variations in the coverago of difforent industrias, depending upon whother a given industry is ordinarily organized in large or small units of operation. Complete information respecting the distribution of the working population is available only at 10 year intarvals, and somotime after the Census dates; comparisons of the data of the monthly survoys and thoso obtained elsowhere in the Bureau are complicated by the fact that the industrial classifioations diffor in several important respects. The distribution of the persons employed at June 1 , 194, by the co-operating firms in comparison with the distribution of the wago-aarners and salaried omployeas envmerated in the Consus of June 1, 1941, wes discussed in the 1944 Annual Reviow of Employment and Payrolis. This showed in the monthly onquiry, an industrial coverage of all employees onverated in the census which ranged from over $41 \mathrm{p} . \mathrm{C}$, in the hotel-and-restaurant and laundry-and-dry-cleaning group, and more than $47 \mathrm{p} . \mathrm{c}$. in trade, to over 93 p .0 . in manufacturing and nearly $97 \mathrm{p} . \mathrm{c}$. in mining. Differences in the industrial classifications of establishments and individuals contributed to an important oxtent to these disparitios, exaggerating the high coverage in mining and manuracturing, and minimizing that in trade. The present coverege in the abovementioned service divisions and in trade may bo estimated at 48 p.c. and 52 p.c., respectively.

It should be noted that the statistics of persons amployed, as published in various tables in the monthly bullatins, do not represent ostimates of the total nuenbers ongaged in the specified areas or industries, but show the distribution of the workers on the staffs of the co-operating firms at the indicated dates, togetner with the distribution of thair weokly payrolls. and the por capita wookly aarnings of such employees.
2. - THE QUESTIONNATRE - From 1921 to 1941, the questionnaire used in collecting current data on amployment callod for a statement of the number of persons at work on the last working day of tho month. With the introduction of the statistios of payrolle in the 8 pring of 1941 , it became necessary to ask for information showing the numbers of omployees on the payrolls in the last pay pariods in the month, to relate to the salarios and wages. The difforence in the coverage of employment as a result of this change was considerable, espeoially in industrias with high proportions of casual labour. In so far as was possible, adjustment in the records was made in 1941, to presorvo the comparability of the data collected prior to the spring of 1941, and those thereafter collected. The inclusion of casual workers to a greater extent than was the oase in the earlier surveys novertheloss constitutes an element of incomparability in the present statistics of employment and tnose tabulated prior to the institution of the complementary statistios of payrolls in April, 1941. The questionnairo now used asks employers to furnish data showing the gross earnings of thoir salaried omployees and wage-aarners in the last pay poriods in the month, the employees and their earnings to be grouped according to the duration of their pay periods, whether these be monthly, somimonthly, fortnigntly, woekly, otc. The payrolls roportod include amounts deducted for taxes, unemployment insurance contributions, etc. Cost-of-living allowances, incorporated in the basic wago-rates as from Fob. 15, 1944, are facluded, as was the cese before their incorporation in the basic rates. Comissions and incentive and production bonuses are also includad.
3. - THE PROCESSING - In tho Buroau, the statistics of salaries and mages reported for any poriod exceeding a weok are reducod, for tabulation purposes, to the proportions whioh would be earned in one week in the period, the numerator of the fraction ordinarily usod for this purpose

## EXPLANATION OF THE METHOD USED IN FREPARTNG THE MONTHLY STATISTIGS OF RMPLOYMSNI AND PAYROLLS. (Cont'd.)

boing six days, the standard working week; the denominators of the fractions are the numbers of working days in the different pay periods, excluding only the Sundays. Finere operations are oontinuous, the numerator of the fraction is 8 even, the denominator being the total number of days in the pay period, including Sundays. In the case of employees paid at annual or montnly rates, so that their earnings are not affocted by variutions in the number of working days in the month, rixed proportions are used to reduce the earnings to a weokly basis, without regard to the length of the calendar month. The sums resulting from these various celculations are then aggregated to give the total amounts, which, on the average, would be paid for servioes rendered in one wesk by the persons on the payrolls of the co-operating establishnents. The employes reported are not in all cases necessarily mployed for a period of a week by one firm. Bmployers are urged to make a practice of furnishing data only for the last pay period in the month for thoir various olasses of employees rather than to aggregate statistics for several pay periods, since the latter method tends to exaggerate the amount of duplioation possible in the statistics of employment in cases where individuals may be employed by more than one co-operating establishment in a period of several weeks.
4.-THE TABULATION - The data tabulated monthly show the number of persons drawing pay from the ostablishments furnishing returns the given dato, and their weokly oarnings, togetner wich the rumbors of employees and the payrolis of the same firms in the proceding month, and in the besic periods. The statistics of the first tabulation are prolimiary, the re-tabulation of the statistics on the succoeding month's tabulation incorporating revisions in the returns originally tabulated, as well as reports received too late for inclusion in the preliminary tabulation.
5. - THS INDEX NUNBERS OF EMPLOYMENI - The index numbers represent the peroentage relationship betweon the number of persons omployed by tho establishments ourrently furnishing data and the number which they had omployed in the basic period. The number of workers omployed in the basic period by firms which thon operated but have $\varepsilon$ ince gone out of business are continued in the basic average figures, while firms or branohes opening for business since the basic period are tabulated with zero base figures. The basic averages of establishonts which operated in the base period but have since boen addod to the mail ing list are incorporated in the basic figures fron the date when their co-operation was first obtained.
6.- THE INDEX NUBBERS OF PAYROLLS - Shortly after the institution of the statietion of payrolls, it became necessary to present the data in the form of index numbers. The earliost period which could be adopted as a base was selectod for the purpose, namely, the wook of June 1, 1941. The current disbursements are thus related to the sums expended in salaries and wages by the co-operating employers on or about June 1,1941 , as 100 p.c. To provide a measurement of the changes in employment and payrolls from the establishenent of the latter series, the monthly indexes of employment are relsted to June 1,1941 , as 100 , in the tables giving the two sets of data. For all purposes apart from comparison with the statietioa of payrolls, however, the indexes compiled on the original 1926 base should be ueed.
7.- TRE WBEICY BARNINOS - The average woekly earnings represent the division of the aggregate weekly salarles and wages reportod by the co-operating establishments, by the number of their employees in the same pay periods; the index numbers of average weukly earnings given in the table on page 4, are based on the averages reported in the week of June 1,1941 , as 100.

Statistics of average hourly and woekly oarnings of wageaearners for whom the larger omployors keep reoord of hours worked are contained in the monthly bulletins on manhours and average hourly earnings, aveilable from the end of 1944.

# ANNUAL REVIEW OF ENPLOYMENT AND PAYROLIS <br> IN CANADA, 1947 . 

| Dominion Statistician: | Herbert Marshall |
| :--- | :--- |
| Director, Labour and Prices: | H.F. Greenway |
| Chief, Moloyment and Payroll Statistics Branch: | M.E.K. Roughsedge |

1. GENERAL SUMMARY.

## EMILOYLENT

Industrial activity in the Dominion during 1947 reached a new all-time high
level. Loderate improvement in employment in manufacturing and relatively ereater expansion as compared with 1946 in many of the nonmanufacturing industries included in the monthly surveys of employment and payrolls brought the general index to 187.9 p.c. of the 1926 average. This fipgure was 8.5 p.c. above that indicated in 1946, and exceeded by 2,1 p.c. the previous maximum index of 184.1 recorded in 1943. The upward movement in the year under review resulted not only from continuer heavy domand for commodities and services, but also from several other factors, notably generally groater availability of labour and supplies, and a diminution as compared with 1946 in the workinf, time lost as a result of labour-management disputesl. The changes in the levels of employment in the various industries in 1947 rosulted in a distribution of recorded employment as between the manufacturinf, and the non-manufacturing classes which was more similar to that shown in 1939 than was the case in any recently-preceding year.

The feneral trend of employment was steadily though very slightly downvard from Jan. 1 to May 1, a period in which the index lost by only 1.4 points. From June 1, however, the movement was unintarruptedly favourable, the index risinf by 20 points to reach a new maximum of 199.5 at Dec. lo lionth by month, the level of industrial employment in 1947 was rather hipher than in the same period of either 1946 or 1945; the index numbers in the first quarter of the year, however, were lower than in the same three months of 1944. From dan. 1 to Dec. 1, 1947, the index rose by 10.3 p.e. ; this rate of increase practically coincicied with that indicated in a similar comparison in 1946, but exceeded the average percentage advance between those dates in earlior years of the record. In 1945, however, the curtailment in wartime production following the termination of hostilities had resulted in an unprecedented decline, mounting to four p.c. between Jan. 1 and Dec. 1.

Industrially, there were widespread though generally moderate increases in employment in the manufacturing industries, in which the index rose by 6.3 p.c. from 1946. Mining showed a small advance; the situation was seriously affected in the year under review by prolonged disputes in the coal fields. Considerable improvement was indicated in the remaining, major industrial divisions, the gains being as follows: 6.5 p.c. in transportation; 7.1 p.c. in the service $2 /$ division; 7.3 p.c. in financial institutions; $15.1 \mathrm{p} . \mathrm{c}$. $\ln$ logginf; $15.3 \mathrm{p} . \mathrm{c}$. in communications, and $18 \mathrm{p} . \mathrm{c}$ 。 in constraction and maintenance. The index of employment in the nonmanufacturing classes taken as a unit advanced by 10.5 p.c. in the year. Noasured from the wartime poak, recorded in 1943, there was a decline of 13,8 p.c. in employment in manufacturinp, and an increase of 20.1 p.c. in the inclided non-manufacturing divisions as a whole. $1 /{ }^{n}$ Strikes and Lockouts in Canada during 1947", issued as a supploment to the Labour Gazette for April, 1948.

The hisher level of suployment in manufacturing in 1947 than in 1946 rosulted from thes operation of several important factors. One of these was the virtual completion of the post-war reconstruction programme inother was a decided fallingoff in the losses due to iniustrial disputes 17 ; the total of 41,357 wage-earners involved in strives in 1947 was less than half the 1946 figure of 86,815 . The reduction in the time lost in labourmanagement disagreements was even more striking; the man-working davs so lost fell from 3,760,299 in the preceding 12 months, to 877,077 in the year under review, when the total was also considerably less than that of 1,238,901 working days lost in 1945. Improvement in the supplies of labour and materials also contributer to the more favourable situation in $194 \%$, while the

The trand in mandauturiag was gonarally upinad from Jan, 1 to Nov, in 2647, in whish the Doc. 1 figurs whs unchanged fron that in the precering month on the whole, the month-to-month advances were moderate. By the ond of the year, the index had risen from Jan, 1 by 7.6 p.c., to 205.1 at Dec 1 . This fipure, with that at liov. 1, was the highest since July 1, 1945, not long before V-J Day. The advances as compared with 1946 extended to the heavy and the lipht manufactured goods industries, which showe? increases of 8.9 p.e and 4.3 p.c. respectively, in the 12 months.

During 1947, there were genernl increases from 1946 in recorded employment Lor whike: of both sexes, that among women exceeding three p.c., while the rise in the number of men on the staffs of the larger industrial emplovers approximated ten p.c. The eeneral ratio of women por 1.000 employees of hoth sexes in the nine major industries was 223 in 1947, as compared with 234 in 1946. These are the only two zears in which monthly data on sex distribution have been collected, but a comparison with the situation indicated at Oct. 1, during the war and since is interesting. The following are the propontions recorded at that inte in the last, six years; 1sia? 220; 1945, 235: 1995 , $255 ; 1944,2713$ 1943, 258 and $2942,235$.

A provinctal reviow of the data for leasing induserien sacwe generally ingag: levels of enployment in 194 ? than in 1340 in all areas except Nova Scotia. In that. province, there was a decline of 3.7 p.c. in the year under revisw. In the romaining provinces, the increases in the 12 months ranged from $4.5 \mathrm{p}, \mathrm{c}$. in llanitoba and 5.3 p.c. in Saskatchewan, to 8.2 p.c. in Quebec, 9.2 p.c. in Ontario, and 16.3 p.e. in British Columbia. In the last-named, the marked advance partly resultod from a substantial dacline in 1947 in the losses in employment and working time due to industrial disoutes ${ }^{1 /}$ which had been a factor of particular importance in the province in 1946. In liova Scotia, curtailment in industrial activity during the prolonged dispute in the coal Fields was largely responsible for the lower index number of employment in 1947.

In most provinces, there were moderate advances in manufacturinf as a whole us compare: with 1946, the exceptions being Prince Fdward Island and Nova Scotia. In the latter, reduced activity in iron and steel plants durine part of 1947 had a depressing effect upon the annual index in manufacturing in the Naritime Provinces as n whole. Mininf, transportation and services, were also quieter in that area, in which, as already mentioned, the prolonged disputel/in the coal fields seriously affected the general situation. In the remaining provinces, the movement in the non-manufacturing industries was generally favourable. In most cases, the percentage increases in omploment in the latter groun in 1947 as compared with 1346 were relatively larger than that in manalactursiog.

Tho trenc of Intiastriai mpioymeat in the lenciag centras was gensral2y upward in 1947 as compared with a year earlior. The expansion was on a relatively maller scale than that indicated in the same comparison in the country as $n$ whole. The annual index for Canada rose from 1946 by $8 \frac{1}{2}$ p.c., while the increase in the eifht largest citins amounted to 7.7 p.c. The Dominion index of employment reached T, Itrikes and Lockouts in Canada during $1947^{\prime \prime}$, issued as a supplement to the Labour Gazotte for April. i9t8.

 1947, 1946 and 1945.

1/ See explanatory notes on pegen I and II.
a new all-time maximum in the year under review, when the composite index for the eight metropolitan areas with populations exceeding 100,000 was lower than in either 1943 or 1944 , although it was otherurise the highest in the record.

The increases in the index numbers of employment for the larger municipalities varied from 3.9 p.c. in Winnipeg and 4.4 p.c. in Ottawa, to 11.6 p.c. in Hamilton, 11.7 p.c. in Nindsor and $12.9 \mathrm{~h}^{\mathrm{c}}$ Vancouver. In several cases, diminution in 1947 as compared with 1946 in the number of workers involved in industrial disputes and in the amount of time so lost, was a factor contributing to the hicher levels. Although there was general improvement in the situation in the cities in the year under review as compared with the preceding 12 months, activity in most of the larger cities was lower than during the latter years of the war period, Ottawa and Winnipeg being the exceptions. In regard to the former, it should be noted that the figures of the present bulletin relate to industrial employment, exclusive of fovernment services, etc.

The Dominion Bureau of Statistics tabulated returns in 1947 from a monthly average of 18,849 leading firms $1 /$ and branches in the following major industrial divisions $2 /$; manufacturing, logging, mining, transportation, commuications, construction, services (mainly hotels and restaurants and laundries and dry-cleaning plants), trade and finance. The distribution of the persons emploved by these establishments is shown in Tables I and II, which also give annual index numbers of employment and payrolls, with average wookly earnings.

The reports received monthly from emplovers in the major leading industries during 1947 exceeded those furnished in 1946, by 11 p.c.; this increase brought about a somerhat higher coverage ${ }^{2 /}$ of industry, although the porcentage gain in this respect would be much smaller than the percentage increase in the number of firms. Adjustments for changes in the coverage are made in the index numbers of employment. It is apain emphasized that comparisons from vear to year should be made through the indexes, which are aciustod not only for the inclusion of firms newly-added to the mailing list, but also for declines in employment resulting from the closinf, of businesses or branches.

Pryrolls.
The annual index number of weekly payrolls in the eight leading industries in 1947 was higher by 21.2 p.c. than in 1946, an increase which was accompanied by that of 8.5 p.c. in the index of employment. Based on the June 1, 1941, payrolls of the reportine firms as $100 \mathrm{p}, \mathrm{c}$., the latest figure was 172.6 , as compared with 142.4 in 1946 and 142.6 in 1945. Previously, the maximum annual index of payrolls in the record of about $6 \frac{1}{2}$ years was in 1944, when the figure was 148.2. The rise in the index in the period under review as compared with earlier years was due to the payment of higher wage and salary rates in most branches of industry, together with an unusually great volume of employment in 1947. Another favourable factor was a reduction in the number of emplovees involved in industrial clisputes, and in the workinp time lost as a resilt of strikes, as compared with 1946. In the nine loadinf industries taken as a whole, the index of payrolls rose by 20.9 p.c., from 142.7 in 1946 to 172.5 in 1947, the hishest in the record.

[^0]
# EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS INDUSTRIES OTHER THAN AGRICULTURE <br> 1929 AND 1933 AND 1939 TO 1948 

1926 $=100$

The curve is based upon the number. of enqloyees at work of the first day of The manth as indicaled by the firms reporting incompacisen wilh the average enqlogment they afforded during the calendar year 1928 as 100. Curves are plotled for 1925, The year of maximim industriol activify, for 1933, when enqlopment was al its minimum in The recard strce 1920, and for the years since 1938

As already stated, the monthly record of salaries and wages $1 /$ was established in 1941, although the employment series had been instituted many years earlier. Since the end of 1944, monthly statistics of man-hours, hourly earnings and weekly wages have also been compiled for the wage-arners for whom laading employors keep record of hours worked. To measure the current movements of employment and payrolls it was necessary as soon as possible after the establishment of the payroll record to express the figures in the form of index numbers. The period selected for this purpose was the week ending on or about June 1, 1941. For obvious reasons, a period of such short duration, established so soon af'ter the commencement of the record cannot be satisfactory. Preparations are now under way to set up a more suitable basic period for the figures of employment, payrolls and average earnings.

In the period for which current statistics of weokly payrolls are avallable, the disbursements of the larger firms in the eight leading industries have mounted by $72.6 \mathrm{p} . \mathrm{c}$. , while the 1947 index of employment had risen by $23 \mathrm{p} . \mathrm{c}$. since June 1,1941 . As has previously been pointed out, the factors mainly responsible for the materially larger advance in the index of aggregate payrolls than in that of employment are (1) the payment of higher wage-rates in very large numbers of industries and establishments, in addition to the general increases due to the mandatory payment of cost-ofliving allowances to the majority of workers under the terms of P.C. 7440, P.C. 8253 and P.C. 9514; the rates at which these bonuses were paid were increased on more than one occasion before they were absorbed in the basic wage-rates as from Feb. 15, 1944, (2) the progressive up-grading of emplovees as they gained experience in their work and (3) reductions in the proportions of women workers.

## AVERAGE WEEKLY EARNINGS.

The salaried employees and wage-earners emploved in leading establithments in the eight major industrial groups received an annual average of $\$ 36$. 15 per week in 1947. As compared with $\$ 32.38$ in 1946, there was a rise of 11.6 p.c. In earlier years of the record, the averages were as follows:- 1945, \$31.99; 1944, \$31.84; 1943, 30,78 , and $1942, \$ 28.56$. In the case of the nine major industrial divisions, the general per capita figure in the year under review was $\$ 36,19,11.4 \mathrm{p}, \mathrm{c}$. above the figure of $\$ 32.48$ in 1946. From June 1, 1941 , when the current record of payrolls was instituted, the average weekly earnings of the persons of the staffs of the cooperating employers in 1947 showed a general increase of 43.2 p.c. in the case of the aicht main industries, and of $42 \mathrm{p}, \mathrm{c}$, in the case of the nine leading industrial divisions.

In nanufacturing, the weokly salaries and wages reported by loading establishments averaged $\$ 36,57$ in 1947. This per capita figure exceeded by 12.5 p.c. the mean of $\$ 32.51$ indicated in 1946, when there had been dislocations in the situation, arising partly from reconversion activities during the first, post-war year, and partly from numerous and prolonged industrial disputes. In 1945 , the annual averafe oamings of aalaried employees and wace-earners reported in manufacturing were rather higher. In precedinf, years for which data are available, the figures were \$32.65, $\$ 32.66, \$ 31.50$ and $\$ 29.17$ in $1945,1944,1543$ and 1942 , respectively.

From the institution of the monthly series on salaries and wages, the weekly earnings of persons employed in representative marufacturing establishments rose in 1947 by 43 ग.c., the June 1, 1941, figure havirg been $\$ 25.57$. Even more striking is the increase in the last eight years, the 1947 average exceeding, that of $\$ 23.11^{*}$ in 1939 by 58.2 p.c. From 1939 to 1947, the cost-of-living index advanced by approximately 50 p.c. While the rates of income tax have increased, and the incidence of the tax is bronder than in prewar days.

* Seo footnote on page 13.
hart No. S

From the latter part of 1944, monthly statistics of average weekly wages of hour ly-rated wage-earners have been available for persons on the payrolls of leading firms in manufacturing and certain other industries in which adequate records of hours worked are maintained. In the case of factory operations, the reported weekly wages averaged $\$ 30.74$ in $1945, \$ 29.89$ in 1946 and $\$ 34.13$ in 1947. At the Dec. 1 high point in that year, the figure was $\$ 37.24$, exceeding by 14.1 p.c. the averafe of $\$ 32.64$ at Dec. 1, 1944. The average hourly rate in manufacturing as a whole had then stood at 70.5 cents, falling to the post-war low of 67 cents a year lator, thence rising to 85.6 cents at Dec. 1, 1947. The 1045 average was 69.4 cents, that in 1946 , 70 cents, while the 1947 figure was 80.3 cents. The average hours worked were reported as 44.3 per week in $1945,42.7$ in 1946 and 42.5 in 1947.

## The 1947 Annual Review of Dmployment.

As in previous years, the first part of the 1947 Annual deals mainly with employment, piving a fairly detailed revicw of the situation in the various industries and areas, together with related data on payrolls. The second part is particularly concerned with the statistics of payrolls and average earnings.
II. - EMPLOMMEMT AND PAYROLLS BY ITDUSTRIES.

## 1. Manufacturing.

Employment. - The trend of employment in manufacturing as a whole was generally favourable during 1947, when curtailment was noted on only two occasions, at Jan. l and Dec. 1. The percentage loss at the beginning of January was rather below-average in size, while that at Dec. 1 was insignificant, being too small to affect the index number. From 190.6 at Jan. 1, the index rose to 205.1 at Nov. 1 and Dec. 1. This was a gain of 7.6 p.c., as compared with a rise of 7.9 p.c. from Jan. 1 to Dec. 1, 1946 ; in 1945 , there was a decline of 13.4 p.c. between the same months. Standing at 199.0, the 1947 annual average index on the 1926 base exceeded by 6.8 p.c. the 1946 figure of 186.3 , but was 12 p.c. below the wartime maximum index of 226.2 in 1943. The latest figure was also lower than those of 203.6 in 1945, 224.5 in 1944 and 206.5 in 1942. With these exceptions, the 1947 average was higher than in any other year of the record. As compared with 1939, there was an increase of approximately 77 p.c.

During the year under review, the index of aggreceate weekly payrolls showed a gain of $20.5 \mathrm{p} . \mathrm{c}$. over 1946. To some extent, the higher figure was associated with more satisfactory labour-management relations, losses in employment from industrial disputes $1 /$ in 1946 having, been unusually large, while the losses in man-working days in manufacturing from this cause had then reached an all-time high. The average weokly earnings of persons employed by the larger factories advanced by $12.5 \mathrm{p} . \mathrm{c}$. , to a new all-time maximum fifure of $\$ 36.57$ in 1947 .

Information in regard to the sex distribution of the persons in recorded employment has been publishod monthly since January, 1946. In 1945 and 1944, such statistics were collected semi-annually, while in 1943 and 1942 data on sex distribution are available only at Oct. 1. During 1947, when the general increase in employment in manufacturing amounted to 6.8 p.c., there was a rise of some six p.c. among women, and of about $9.4 \mathrm{p} . \mathrm{c}$. among men as compared with 1946. The ratio of women per 1,000 persons of both sexes in recorded employment in that year was 223, while in 1947, the peneral proportion was 228 per 1,000. At Oct. 1 in the vears for which statistics for the larger establishments are available, the ratios were as follows:- 1947, 229; 1946, 241; 1945, 260; 1944, 283; 1943, 279 and 1942, 257.
1/"Strikes and Lockouts in Canada during 1947", published as a supplement to the Labour Gazette for April, 1948.

# THE TRENDS OF EMPLOYMENT IN THE MAJOR gROUPS OF MANUFACTURING AND IN MANUFACTURING AS A WHOLE DURING AND AFTER THE WAR 

A brief review of the situation in the various areas shows genaral expansion in employment in manufacturing in 1947 as compared with 1946, except in Frince Edward Is land and Nova Scotia. In New Brunswick and the three Prairie Provinces, the increases in the index numbers were slight; those in Zuebec, Ontario and British Columbia were more noteworthy. Table III gives the index numbers of employment in manufacturing in the provinces in 1947 and 1946.

| Chatada | 186.3 | 199.0 | 6.8 |

It will be recalled that industrial disputesl/in Quebec, Ontario and British Columbia hac affected employment to a much preater extent in 1946 than in 1947. The increases in tio index numbers in the lutter year over the precedinf, 12 months therefore partly refloct recovery from an abnormal situation.

Although activity in manufacturing, in the yaar uncer reviow was at a higher level in all conomic areas except the llaritime provinces than in 1946, the index numbers in the various parts of the country except Ontario and the Prairie Area were lower than in 1945, In the two years, there was little general chanfe in the Prairie Provinces. The slight increase noted in Ontario in 1947 from 1945 was partly due to the fact that an important industrial dispute in the latter part of 1945 had then seriously affected the situation in manufacturing in that province. In all areas, the volune of employment in manufacturing in 1947 was less than in 1944 or 1943 , when wartime production had reached its peak.

During 1947, the proportion of workers in Canada engaged in turning out heavy manufactured goods was rather greater than in 1946; the strikes in effect in that year had particularly affected workers in the durable manufactured goods divisions, in which reconversion to peace time production had also been an important factor. The retio of employees indicated in the hoavy mampacturing industries had fallen from $57.1 \mathrm{p.c}$. in 1943 , to $47.6 \mathrm{p} . \mathrm{c}$. in 1947 when the figure was nevertheless considerably higher than in prewar days. Table IV gives the percentage distribution of the employees reported monthly by leading manufacturers in the heavy and the light manufacturing industries since 1936.
1/"Strikes and Lockouts in Canada", published as a supplement to the Labour Gazette for March 1947 and ipril, 1948.

## EMPLOYMENT AND PAY ROLLS IN MANUFACTURING

JUNE $1941=100$

PER CENT
PER CENT

- 13 .

Table IV. - Distribution of Recorded Employment in Manufacturing.
Establishments Producing

| Year | All Reporting Manufacturing <br> Establishrents | Durable Manufactured Goods | Non-Durable <br> Manufactured Goods |
| :---: | :---: | :---: | :---: |
|  | P.C. | P.C. | P.C. |
| 1937 | 100.0 | 42.3 | 57.7 |
| 1938 | 100.0 | 41.0 | 59.0 |
| 1939 | 100.0 | 40.4 | 59.6 |
| 1940 | 100.0 | 43.3 | 56.7 |
| 1941 | 100.0 | 48.9 | 51.1 |
| 1942 | 100.0 | 53.0 | 47.0 |
| 1943 | 100.0 | 57.1 | 42.9 |
| 1944 | 100.0 | 55.7 | 44.3 |
| 1945 | 100.0 | 51.5 | 48.5 |
| 1946 | 100.0 | 46.8 | 53.2 |
| 1947 | 100.0 | 47.6 | 52.4 |

The index of employment in the heavy manufactured goods division rose from 1946 by 8.9 p.c., to 209.2 in 1947 . It was then substantially lower than in the period, 1942 to 1945, but was otherwise the maximum figure in the record. In the non-durable manufactured goods industries, the 1947 index number of emplovment, at 190.9, was the highest yet reached, exceeding by 4.9 p.c. the 1946 figure. Previously, the peak index was that of 184.7 , recorded in 1944.

There were widespread advances in employment during 1947 as compared with 1946 in the production of durable and non-durable manufactured goods. The exceptions were the fur and the animal food industries; in the latter, the existence of strikes was an important factor in the year under review. There was practically no general change in the miscellaneous non-metallic mineral products group. The trends in the remaining classes were generally favourable. Especially large percentage increases were indicated in lumber, rubber, clay, glass and stone, electrical apparatus and non-ferrous metal plants in 1947 as compared with 1946, when it will be noted that several of those industries had been seriously affected by industrial disputes.

Payrolls in Manufacturing- The general increase of 6.8 p.c. in the index of employment in manufacturing in 1947 as compared with 1946 was accompanied by a gain of $20.5 \mathrm{p} . \mathrm{c}$. in the index number of payrolls, which stood at 166.9 , as compared with 138.5 in 1946 and 152.1 in 1945. The latest fifyre was slightly lower than that of 167.8 in 1944, but was otherwise the highest in the record. The index numbers of payrolls are based on June 1, 1941, as 100. Although the index of payrolls in 1947 fell a little short of the maximum fifure indicated in the period for which data are available, the index number of average weekly eamings was substantially higher than in any earlier year, standing at 143.0 , as compared with 127.7 in both 1944 and 1945, previously the peak figure.

The weekly salaries and wages disbursed by the 9,281 larger manufacturers co-operating, in the monthly surveys represented a weekly average of $\$ 36.57$ for their employees. In the preceding 12 months, the per capita figure was \$32.51. The averages in other years of the record were as follows: $1945, \$ 32.65 ; 1944, \$ 32.66 ; 1943$, $\$ 31.50$, and $1942, \$ 29.17$. In $1939^{*}$, the employees of the reporting establishments had received weekly salaries and wages averaging \$23.11. The average earnings of persons employed in the larger manufacturing plants have therefore risen by 58.2 p.c. in the last eipht years, during which the cost-of-living index has advanced by approximately $50 \mathrm{p} . \mathrm{c}$. The rates of income tax have also increased, while the incidence of the tax is broader than in prewar days.
*See Report 9-7010, Average Weakly Salaries and Wages of Persons Employed in Manufacturing, Mining and Logging, in 1939 and in 1942-47.

EMPLOYMENT AND PAY ROLLS IN MANUFACTURING

The por capita wookly eamings indicated in manufacturing in each month of 1947 were higher than in the same period of 1946 , when serious losses in earnings had resulted from industrial disputes. From January, 1947, successive new all-time highs were recorded month by month; at Dec. 1, the weekly figure was 21.1 p.c. above the anrual low at Jan. 1, 1947, and exceeded by 13.6 p.c. the average at Dec $1,1946$.

The trend of average eamings was upard during 1947 in all branches of manufacturing An examination of the figures for the two broad groups within this category shows an increase of $12.4 \mathrm{p} . \mathrm{c}$. In the weekly salaries and wages of persons reportad in plants producing heavy manufactured goods, and a rise of $12.6 \mathrm{p}, \mathrm{c}$. in the lifht manufactured gools industries; the general advance in manufacturing was 12.5 p.c. From the commencement of the morthly record of weekly earnings at June 1, 1941, the average in the former division momitod by 41.1 p.c. in 1947, as compared with an incroase of 46 p.c. in the non-durable goods industries. Between 1939 and 1947, the weekly enrnings rose by 59.9 p.c. and 55.6 p.c. in those two classes, respectively. At Dec. 1, 1947, when the per capita figures had reached their poak for the year, the increases from 1939 amounted to 72.2 p.c. in the heavy manufrctured foods division, and to 66.7 p.c. in the non-durable goods category. In connection with the 1939 comparisons, it may be noted that, in addition to upward adjustments in the wagerates, greater regularity of emploment during the war and in the post-war period, has undoubtedly been a factor contributing to the higher levels of average earmings in industry.

Since the latter part of 1944, current statistics of manmours, average hourly earnings and average weekly wages have been available for the wage-earners for whom leading manufacturers keep record of hours worked. The following table summarizes the data for the last three years:

Table V.- Annual Average Statistics of Ilours Norked Per Week, Ilourly Earnings and Weokly Vages of Hourly-Rated Ware-Eamers Employed in Leading Manufacturing Establishments, 1945, 1946 and 1947.

|  | Hours | Hourly | Week ly |
| :---: | :---: | :---: | :---: |
| Year | $\frac{\text { Per Week }}{\text { No. }}$ | $\frac{\text { Earnines }}{\phi}$ | $\frac{\text { Waces }}{\frac{1}{6}}$ |
| 1945 | 44.3 | 69.4 | 30.71 |
| 1946 | 42.7 | 70.0 | 29.87 |
| 1947 | 42.5 | 80.3 | 34.13 |

In the three years, the average hourly earnings in the larger manufacturing plants have risen by $15.7 \mathrm{p} . \mathrm{c}_{\text {. }}$, and the weekly wages, by $11.1 \mathrm{p} . \mathrm{c}$. The decline indicated in the average working hours is partly due to a diminution in the amount of overtime worked following the cessation of hostilities, and partly resulted from a lowering in the standard number of hours of work in many establishments and industries in the post-war period. The statistics of payrolls and average earnings in manufacturing and other industries are discussed in greater detail later on in this review.

The following paragraphs deal with the situation reported in the various branches of manufacturing in 1947. Succeeding pages are devoted to a brief analysis of the statistics for the non-manufacturing classes included in the monthly surveys of employment und payrolls. The distribution of the enployees for whom statistics were available in 1947 is shown in Tables I and II, on pares 2 and 4.

Animal Froducts - Edible - Largely as a result of prolonged labour-management disputes in the meat packing industries in 1947, the level of employment in the animal food industiries was lower than in 1946, when activity had reached an allutime high. From 234.0 in that year, the index of employment in the animal food group decliner to 227.8 in 1947. In the mest packing industry, the reduction was from

EMPLOYMENT AND PAY ROLLS IN MANUFACTURING MAJOR GROUPS - NON-DURABLE GOODS II

240.5 in the former year to 220.2 in the latter. On the other hand, activity generally increased in the fish packing, industry, in which the index govanced by $4.6 \mathrm{p} . \mathrm{c}$. to a maximum of 235.5 in $194 \%$. In the dairy products division, the index of 227.3 in the year under review exceeded the, 1046 fiplare by practically 10 points. Of the staffs of the 507 leading employers ${ }^{1 /}$ co-operating in the monthly surveys in 1847, 188 per 1,000 were women. This ratio wis similur to that indicated a year earlier.

Activity in the animal foods industry reached the highest point in the year at Dec. 1, when the index, at 255.8 , was also hipher than in any other month of the record, exceeding by three $\mathrm{P} \cdot \mathrm{C}$ : the Dec. 1, 1946, figure of 248.4.

Tho salaries and wapes roported in the edible animal products division in 1947 represented a weekly average of $\$ 35.09$ per person in recorcod employment. the ner capita figure in 1940 was $\$ 31.88$, while those in earlier years were as follows lyat \$30.81; 1944, \$30.0n; 1943, \$29.34 and 1942, \$27.57. The corresponding figure in l939 was \$23.61. The latest annual index of aggregate waekly payrolls, at 182.9 , exceeded by eight p.c. that of 169.4 in 1946, previously the maximum in the record. The averare hourly earnings in this group of industries rose from 67 cents in 1946 to 75.9 cents in 1947. In the meat products division, the average in the latter year was 84.1 cents per hour, as compared with 72.5 cents a year oarlior.

Leather and Products:- Thore was little peneral chance in the volume of employment indicated in the leather-using industries during 1947, when insignificant mains were recorded in loot and shoo and other leather factorios, according to data tabulated from 460 leading establishments. The weekly earnings of their employees averaged $\$ 27.76$, rising from $\$ 25.18$ in 1946 , as compared with $\$ 24.18$ in $1945, \$ 23.46$ in $1944, \$ 22.30$ in $1 \Omega 43$ and $\$ 20.50$ in 1942. The comparable figure in 1939 was \$16.75. The 1947 index number of employment was 155.5 , as compared with 154.4 in 1946, previously the all-time maximum. The increase of $0.7 \mathrm{p} . \mathrm{c}$. in the vear under review was accompanied by that of 10.7 p.c. in the annual inclex of payrolls, which was hifher in 1947 than in any earlier period for which information is available. The hourly earnings reported in the lenther-using industrias during 1947 averaged 63.5 cents, as compared with 55.8 cents in 1946 , and 52.2 cents in 1945.

Fur and Fur Products.- a decline in employment was indicated in the larger fur factories during 1947. The annual index fell from the 1946 peak figure of 160.5 , to 152.4 a year later. Statistics were compiled from 119 of the larger firms. The number of women on their staffs made up 366 per 1,000 employees of both sexes, an unusually high proportion. Although the index number or employment in 1947 declined by 5.1 p.c. from 1946, there was an increase of 6.8 n.c. in the inter of wootly payrolls. The salaries and wages roported in tho yeu: under review averaged $\$ 34.34$ per employee, as compared with $\$ 30,42$ in 1946, \$29.80 in 1945, \$29.40 in $1944, \$ 28.50$ in 1943 and $\$ 26.37$ in 1942. The 1939 mean was $\$ 24.41$.

Lumber Froducts.- Activity in the lumber-usinf; induatries generally reached its hiphest point on record during 1947, when rough and dressed lumber mills, furriture and other lumber-usinf, plants afforded more criployment than in 1946. In the case of the rouph and dressed lumber and the fumiture groups, emplovment was also in greater volume than in any precedine, year. The index in the miscollanoous lumber products division, however, was higher durinf, the war. Computed from material furnished monthiy by 1,439 leading manufacturers, the peneral index number of employment in lumber and lumber-using factories in Canada stood at 143.8 in 1947, as compared with 127.6 in 1946, when the fipure was hicher than in earlier vears, in spite of prolonged industrial disputes in British Columbia. The annual index of payrolls (based on June 1, 1941) was 183.6, the hichest in the record; as compared with 144.8 in 1946, there was an increase of 26.8 p.c., accompanying that of $12.8 \mathrm{p} . \mathrm{c}$. in the indox of employment. The weekly earnings reported in 1947 averaged $\$ 32.66$, as compared with per capita figures of $\$ 29.12$ in 1946, 827.67 in 1945, \$27.63 in 1944, \$26.C0 in 1943.

# EMPLOYMENT AND PAY ROLLS IN MANUFACTURING MAJOR GROUPS - DURABLE GOODS I 

```
JUNE 1941=100
```

and 223.94 in 1942. In 1939, the omplovees of the larger lumber manufncturing plants had roceived a weekly gveraco of $\mathbf{8 1 9 . 1 9}$. During the year under revicw, the pay of the hourlyarated wage-earnors reported in those industries averaged 7\%.6 cents per hour, as corpared with 64.2 cents in $1: 46$ and 60.5 cents in 1945.

Plant Products - E Cible.- The trend of employment in the vepetable food industries renerally was faverinble during 1947. The index then stood at 190.4, ns compared with 177.7 in the preceding yoar. Improveront was shown in the flour and corcal, sugar and syrup, fruit and vegetable preserving, chocolate and confectionery and bread and bakory divisions.

Statistics were received fron an average of 733 of the larger establishments in the edible plant products division in 1047, when their emplovees eamed a weekly average of $\$ 30.54$, as compared with 327.90 in 1946 , 526.54 in 1545 , 25.68 in $154,425.23$ in 1943 , and 223.48 in 1942 . During 1547 , the re was an advance of $7.1 \mathrm{f} . \mathrm{c}$. from 1946 in the index number of emploment, tojether with an increase of $18 \mathrm{p} . c$. in that of acgremate wookly payrolls, bringing this to the himhest point on reosed. From 57.3 conts per hour in tho precoding year, the avarafe hourly earnings of hourly-rated wape-earners in the vecetable food industries rose to 64.1 cents in the 10 months under roview.

Then recorded emplowment in thesc industries was at its 18.7 low mones at May 1, the index of erploment stond at 170.0 , rising steadily to a maturn of 237.1 at oct. 1. Sonsonal curta: lment rediced the ficure to 200.5 at Dec. 1, 1947, but the index was then $12.3 \mathrm{p} . \mathrm{c}$. abovo that of 178.5 indicated at the opening of the year. In the 12 months under review, women made up 34 p.c. of the reported staffs in the vegetable food industries.

Pulp and Faper, - Further improvement in employment was indicated in 1547 in these industries, greater activity being shown in pulp and paper mills, paper product factories and in printing and publishing establishments. The salaries and wages disbursed by the leading employors in theso catepories and the average carnings of their employees also reached new all-time high levels in the vear.

Data wore compiled fron 119 pulp and paper mills, in which the staffs were in the ratio of 944 men and 56 women per 1,000 workers. The weekly salaries and wapes which they disbursed represented an average of $\$ 48.30$ per employee. In the preceding 13 months, the reported weekly earnings had avnonge? 40.03 , as compared with \$37.08 in $1: 45,36.56$ in $1944,34.02$ in 1943 and 350.93 in 1942 . The 1535 mean was 28,25 , Based on the 1026 averare as 100 , the anmum index of employrenl stuad at 159.6 , the $h$ : mhest in the record, as compared with $14 i^{2} 7$ in 1946 . In the year, there was an increase of $10.3 \mathrm{p} . \mathrm{c}$. in emplownent, while that in the anminl Index of weekly nayrolls amunted to 30.2 p.e. The hourly earnines of wace-earners in pulp and paper mills nvoraçad $\$ 3.8$ cents in 1547 , as compared with 78.8 conts in 1946 and 71.8 cents in 1945.

In tho paper products division, the index of employment stood at 259.3 , ns compared with 241.2 in 1046 , previously the ponk ficuro. The latest index number of payrolls a 1 so reached a new maximu, showine an increase of $24: 2 \mathrm{p}, \mathrm{c}$. over that rocorded $1:$ months earlier. The averace weekly salaries and wapes of persons employed by the 114 co-oporatine firs stood at 32.34 , comanring faverahly with those previously reported. In carlicr yoars of the record, the averages verc as follows:
 rable ficure in $1: 39$ was 23.12.

In the printino and publishin division, statistics we compiled from: 491 leading employers. The annual index of employment, at 164.4 , was higher by 6.4 p.c. than that of 1.54 .5 in 1546 , and, also exceeced any onrlier ficure. The latest index of nyrolls was hicher by $16.5 \mathrm{p} \cdot \mathrm{c}$. than that indicated in 1946 , pre-

EMPLOYMENT AND PAY ROLLS IN MANUFACTURING,2236 MAJOR GROUPS - DURABLE GOODS II JUNE $1941=100$

- 21 -
viously the maximum in the record. The persons on the payrolls of the larger firms in these industries received an sverage of \$38.07 per week before deductions for taxation, unemployment insurance, etc. The per capita figures in preceding vears were as follows: $1: 46$, $\$ 34.61 ; 1545, \$ 35.49 ; 1!44,43.71 ; 1543,331.50$, and 1942 , \$3n.33. In 1935, the average was $\$ 28.35$. In the period which data are available, the averare hourly earnirps of hourly-rated ware-earners in printing and publishines plants have risen from 75.3 cents in 1945 and 78.6 cents in 1846 , to 88.2 cents in 1947.

Rubber Products.- The situation in the ribker industry in 1546 had been seriously affected durinc a lenethy poriod by labour-manamement disputes, which were mainly responsible for a decline of $8.8 \mathrm{p} . \mathrm{c}$. in the annual indox as compared with 1045. In the year under review, the index reached an all-time hirh, standinp at $155.0-19.6$ p.c. higher than in the precoding 1? months, and S.1 F.c. above the 1945 mean. The index of payralls showed an increase of $40.7 \mathrm{~g} . \mathrm{c}$. in 154 from the prececiint $1:$ months, and exceeded by 31.5 p e. the provious maximur fimere recorded in 1545. The armal nverace weekly earrings of the arkers reported by the 56 larger nanufacturers fumishinf data were decidedy himher, standine at 83.1 in 194?, as comparoci witt $\$ 32.61$ in $19.46, \$ 32.46$ in $1545,32.38$ in $1544,545.91$ in 1943 and 27.07 in 1542. In 1:35, the weekly average had arounted to $\$ 31.46$. The 1947 annual ficure of average hourly earnines of hourly-rated wnge-oarners roported by leading rubber factories was 97.7 cents, as comparect with $7 \mathrm{i} . \pm$ cents and 71.2 cents per woek in 1946 and 1545 , respectively.

Textil. Froducts. - The trend of employment and payrolls in the textile industries continued upward during $1: 47$, according to monthly data tabulated from 1.745 of the larper estahlishments, in which the employees were in the ratio of 452 mon and 548 woner per 1,000 workers. Standing at 172.4 , the index number of employmont was $5.3 \mathrm{p} . \mathrm{c}$. above that in 1946, previously the ponk figure in the record. The index number of payrolls advanced by $17.4 \mathrm{p} . \mathrm{c}$. in the year, also to a new all-time hiph. Greater activity was noted in 1947 as campared with 1946 in the ootton, woollen, silk, hosiery and knit goods, and garment and personal furnishirgs divisions of tho textile group.

During 1947, the weokly salaries and waces of the pers ons roported by leading, manufacturers in the textile industries averaged $\$ 27.91$, comparing favourably with the per capita figures indicated in earlier years of the record, as follows: $1446, \$ 24.98 ; 1945,023.95 ; 1044, \$ 2314 ; 1943,121.92$ and $1542,820.51$. In 1935 , the riean mas \$17.33. The reported eamines of the hourly-rated ware-eamors averaged 62.1 conts in the year under reviey, as compared with 54.6 cents in 1946 , and 50.9 conts in 1945.

Tobacco. - There was moderatr increase in employment in tobacco factories in 1547 as compared with 1546 , but activity continued rather lower than in preceding, vears since 1541. Information comniled from 52 leading factories gave an employment index of 130.4 , as compared with 127.0 in 1946 . The maximum index in the record was $145 . \mathrm{f}$ in 1942 . The increase of $2.7 \mathrm{p} . \mathrm{c}$. in the latest index number of employment as compared with $1: 46$ was accompanied by a rise of $15.7 \mathrm{p} . \mathrm{c}$. In the index of pavrollis, which in $1: 47$ was the hichest in the record. The per capita woekly earnings were then \$28.43, as compared with 525.20 in $1546, \$ 24.35$ in $1: 45,23.25$ in $1844,820.00$ in 1943 and $\$ 19.17$ in 1942 . The 1035 averace was 17.62 . In this industry, as in textiles, the pronortion of ferale workers considerably exceeds the general average; in 1047, the roported women constituted 561 per 1,000 omployees of both sexes.

From 51.3 cents in 1045 and 53.9 cents in 1546 , the average hourly earninga of hourly-rated wage-oarnors in the larger establishments advanced to 61.3 cents in 1847.

Beverapes. - Continued expansion was noted in employment in the beverace industries during 1947, when the index number computed from material furnished by lfs

## EMPLOYMENT AND PAYROLLS

 MINING, CONSTRUCTION, MANUFACTURING JUNE $1941=100$

of the larger manmenctirars, rose by 7.3 p.c. to an all-time poak of 317.7 . The annual index of aegregate wrekly payrolls showed a gain of $20.5 \mathrm{p} . \mathrm{c}$. orer the 1540 figure. The per capita figure was $\$ 39.68$ per week, as compared with $\$ 35.45$ in 1046 , $\$ 34.74$ in 1545 , \$34.59 in $1944, \$ 33.56$ in 1943 and $\$ 31.53$ in 1542 . In $153!$, the or:ployees of the manufacturers co-nperating in the monthly surveys of employment had recolved a weekly average of $\$ 28.29$. The average hourly earnings in lis 7 were 80.5 cents, as compared with 69.4 cents and 66 cents per hour one yoar and two years enrlier.

Chemicals and Allied Froducts, - Some improvement in employment was shown in the chemical division during 1947, although activity was at a considerably lower level than during the war. The annul index of employment, at $3=0.3$, was higher by 1.9 p.c. than in 1546 , while the latest index of payrollu pained by 13.3 p.c. in the same comparison. The men and wonen employed by the 435 leading manufacturers cooperating in the monthly survers in the vear under review earned a weekly avoraye of 039.16. In 1946, the per calta salaries and wages stood at 34.06, while tha figures in $1945,1544,1943$ and 1942 were $\$ 33.84, \$ 32.07,830.69$ and $\% 28.55$, respectively. the 1935 mean was $\$ 28.21$. The hourly earninss of the wage-earners for whon the larger chemical plants fumished statistics of man-hours in 1547 averaged 19.8 cents, as compared with 60.4 cents a year earlier, and 68.4 cents in 1945.

Clay, Glass and Stone Products. - Tith continued, heavy demand for buildinf supplies, emrioyment in the clay, glass and stone industries reached an unprecedented volume in 1947. The index, at 183.9 , was 12.8 p.c. above the previous peak figure of 163.0 in 1946. The index number of payrolls rose by $29.6 \mathrm{p} . \mathrm{c}$. in the 12 months, also to the highest point in the record. The sums currently dishursed by the 269 renortinf, firms in weekly salaries and wages represonted a woekly average of \$36. 68 for their employees. In oarlier years, the means were as follows: 1s46, $\$ 31.60 ; 1945, \$ 31.04 ; 1544, \$ 30.80 ; 1543, \$ 29.36$ and $1942, \$ 27.43$. In 1935 , the comparable figure was $\$ 22.88$. At 78.7 cents, the avorage hourly earnines of hourly-rated ware-earners in these industries considerably exceeded the 1946 moan of 67.5 conts, and that of $\mathbb{e} 4.4$ cents inclicated in 1:45. The increases in employment, parrolls and avernce earrings reported in the year under review extended to all main orancho. of the industry.

Flectric Light and Po ar.- Substantial gains in employment were shown in the electric light and power groun during 1947, whon statistics were furnished by 142 of the larger companies. The index number rose from 176.7 in 1046 , to all-time peak of 100.8 in the year under review. The index number of weekly salaries and wages advanced by $13.8 \mathrm{p} . \mathrm{c}$. , also to reach a new maximum. The average per person on the payrolls of the reporting stations in 1947 was \$41.30. In 1946, 1945, 1944, 1943 and 1042, the wookly averages wore $\$ 38.40, \$ 37.15, \$ 37.23, \$ 35.92$, and ${ }^{\circ} 34.37$, respectively, while in 1539, the per capita figure for employees of the larger operators was $\$ 29.82$ per week.

Blectrical Apparatus - Activity in plants prodicing electrical apparatus and supplies ihowed important expansion during 1947 , when the generally favourable moverant from month to month was interrupted on only one occasion. The annual index rone by 21 n.c. Crom 1946 , to 344.7 in 1947 . Froviously, the maxinium was that of 323.0 in 1844 . The $15 / 4$ index number of payrolls was also hicher than in any earlier yoar, exceeding by 33.4 p.c. the 1546 figure, and by 22.1 y.c the provious peak index recorded in 1944. In 15.46, the situation in this industry had been seriously affected by inhour-management disputes, a factor which was of comparatively slight importance in 1547.

Information was received monthly from 200 loading employers during 1947.
The weekly salaries and wases of their workers averaged \$37.71. In 1946 , the figure was $\$ 33.20$, as compared with $\$ 33$. 5 ? in 1945 , $\$ 3: 66$ in 1044 , \$31 86 in 1943 and $\$ 30.63$ in 1542. The comparable 1939 averace was 24,25 . The averape hourly rate reported in

## EMPLOYMENT AND PAYROLLS <br> TRADE AND LOGGING

JUNE $1941=100$

Che aloptricel soparatus industrios in 1947 was 84.7 cents per hour, as compared with 72.5 cents in 1946 , and 70.5 cents in 1545 . Workers in the heav: electical apparatus and mnchinery industry received higher rates, the averages being 92.3 cents in 1947, 75.1 cents per hour in 1946, and 75.3 cents in 1945.

Iron and Steel.- Although employment in the iron and steel industries garerally showed improvement in 1947 over 1946, activity continued at a lower level thar during the war years. The index stood at 213.2 in 1947 , being 5.1 p.c. above the 1946 figure of 202.8 . In immediately preceding years, the index numbers were as fnilows: 1945, 267.3; 1944, 330.5; 1943, 343.3; 1942, 284.6 and 1941, 200.3. The 1939 figure was much lower, at 97.6 . The 1947 index was oomputed irom retums furnished by 1,453 of the leading manufacturers of iron and steel productis.

During 1947, there was the usual considerable decline in activity at the opaning of the year. No general change was noted between July 1 and Aug. 1 . With these exceptions, the trend was consistently favourable. Employment was at a hifher level than in 1946 in the crude, rolled and forged, machinery, agricultural implement, automobile, railway rolling stock, heating appliance, structural iron and steel and foundry and machine shop divisions, whilo aircraft, shipbuilding and munition plants ware quieter. It will be recalled that in 1946 , the situation had been materially affocted by the reconversion programme, and also by major industrial disputes in various branches of the iron and steel group.

The index number of aggregate weekly salaries and wages in the larger astrolissments in 1947 rose by 17.9 p.c. from 1946 , to 144.9 , but was lower than in proceding years. In 1945, the annual index was 168.7; in 1944, 208.6; in 1943, 209.6 and in 1942, 163.7. In spite of the fact that the 1947 and 1946 fipures of jayrolls were below those indicated during, the war years, the per capita earnings in 1947 reached a new all-time high, standing at $\$ 41.12$, as compared with $\$ 36.51$ in 1946 , $\$ 37.54$ in 1945, \$37.69 in 1944, \$35.50 in 1043 and $\$ 34.03$ in 1942. The comparable 1939 fimure was $\$ 25.98$. At Nov, 1 and Dec. 1, 1947, the indicated averages were

The hours reported for the hourly rated wage-eamers of the co-operating iron and steel works averaged 43 per week in 1947. In 1946 and 1545, the averages were 42.7 and 45 hours, respectively. The latter fipure had included important emounts of overtime work, particularly before the cessation of hostilities. The hourly eamings in the 12 months under review avoraged 92 cents, substantially axcoeding the mean of 81 cents in 1946 , and that of 81.2 cents in 1945.

Mon-Ferrous Hetal Products - Although the movement in the non-ferrous metal industras in 1947 as compared with 1946 was upward, the level of employment continued lower than durine the period of intensified activity in the years, 1942 to 1945. The latest anmal index was 327.2 , being $13.2 \mathrm{p}, \mathrm{c}$. above that of 289.1 in the preceding year, but $33.1 \mathrm{p}, \mathrm{c}$. lower than the all-time maximum of 489.4 in 1943 . While the index of payrolls exceeded the 1946 figure by 29 p.c., it was 18.6 p.c. below the 2.43 index. The most recent per capita figure was $\$ 39,96$, the highest in the record. The averaces in preceding years were as follows: 1946, \$35.64; 1945, \$35.31; 1944, 644.68; 1943, \$33.30, and 1942, \$31.78. The comparable figure in 1939 was $\$ 26.93$. In the non-ferrous matal division, the earnings of hourly-rated wage-earners reported by lending firms averaged 86.8 cents por hour, as compared with 75.9 cents in 1946 and 7\%.8 cents in 1045.
l.or-Metolic Nineral Products.- Little change in the general level of employment in the miscellaneous non-metallic mineral products group was indicated during 1947, when the index, at 215.6 , was practically the same as in 1946 , but was 3 iiphtly below the 1945 mean of 216.5. The payrolls, however, were considerably nigher, the index number exceeding by $22.2 \mathrm{p} . \mathrm{c}$ and $26.7 \mathrm{p} . \mathrm{c}$, the averages incicated in 1946 and 1545 . nospectively.

CHART NO 12

## -

Returns were received from 112 of the larger plants in these industries in the vear under review. Their employees were paid an average of $\$ 43.57$ per week. In 1946 , the mean was $\$ 38.74$; in earlier years, the per capita figures were $\$ 38.78$, $\$ 38.10, \$ 37.15$ and $\$ 35.70$ in $1945,1944,1943$ and 1942 , respectivelv. Leading establishments in the non-metallic mineral products industries had distributed an annual average of $\$ 32.34$ per week in 1939.

During 1947, the average hourly earnings of the hourly-rated wage-earners in this division stood at 91.9 cents, as compared with 82.8 cents and 79.5 cents in 1946 and 1945 , respoctively. In the petroleum products group, the latest average was 101.1 cents, as compared with 91.3 cents and 86.4 sents one year and two years earlier.

1:iscellaneous Manufacturing Industries.- There was a slight advance in omployment in the miscellaneous manufacturing industries in 1947 as compared with 1946, nithourh activity was considerably curtailed as compared with the war years. At 220.7 , the index was 2.3 p.c. higher thar in 1946. The war-time peak indox was that of 271.6 in 1943. The increase in the 12 months' comparison was accompunied by that of $10.5 \mathrm{p} . \mathrm{c}$. in the index number of payrnils which, however, was a rood doal lower then in 1945-43. Data were fumished by 281 of the larger industrialists in the miscellaneous manufactured products industries, whose salaried employous ana wafe-earners were paid a weekly average of $\$ 31.87$, as compared with $\$ 29.19$ in the preceding 12 months. In 1945, 1944 and 1943, the weekly figures hac been $\$ 30.25$, $\$ 31.35$ and $\$ 29.32$, respectively. The 1939 mean was $\$ 21.40$.

## 2. THE NON-IMAUFAGTURING INDUSTRIES.

> 1. LOGGING.

Continued heavy ciemand for lumber and paper products resulted in an extremely large volume of employment in logring during 1947. The annual index was 309.1, rising by 15.1 p.c. from 268.5 in 1946, previously the maximum. The accompanying pain in the index of weekly payrolls was 40.9 p.c. During the year under review, the index of employment advanced from a low point of 239.8 at June 1 , to a maximum of 405.2 at Dec, 1. Except in the Prairie Provinces, there were general increases in activity in logeine in all economic areas. Monthly statements on employment and payrolls were furnished during 1947 by 648 leading operators, whose employeos received an average of $\$ 35.42$ per week in salaries and wages. This figure compared favourably with those of $\$ 29.03$ in $1946, \$ 26.89$ in 1945 , $\$ 26.54$ in $1944, \$ 24.78$ in 1943, and $\$ 20.34$ in 1942. In 1939, the weekly earninps of persons employed by the larger logeing firms were \$17.32. It should be noted that these figures do not make allowance for the value of board and lodging, frequently a part of the remuneration of men engaged in bush work. Another of the factors affecting the current statistios of weekly earnings in logging, particularly in the Eastern and Contral provinces, is the practice of withholding part of the earnings until the employee leaves the camp at the end of the season, whilo the high labour turnover characterizing the industry in many parts of the country tends to produce unduly low averages. Another point to which attention may be drawn is the higher figure of average carnings indicated in logging in British Columbia than elsewhere in Canada; in part, this is due to differences in the nature of the work carried on in that province as compared with other sections of the Dominion. It may 21 so be noted that the average earnines reported in this industry in British Columbia are above the general average for workers on the pay lists of the larger industrial establishments in the province as a whole, a situation which is not indicated in any other province.

> 2. MIMING.

EMPLOYMENT AS REPORTED BY EMPLOYERS IN MINING ESTABLISHMENTS
1929-1947

and 1944 , but was otherwise the lowest since 1938. At 158.1, the latest figure was 1.8 p.c. above that of 155.2 a year carlier. As in 1946 , there were considerable losses in 1947 due to disputes in the mining division, those in the latter year taking place mainly in the coal fields.

As compared with 1946, there was a rise of $10.8 \mathrm{p} . \mathrm{c}$. in the index number of payrolls, bringing the figure for 1947 to the hishest in the record. The averaf;e wookly oamings of persons employod by 641 leading mine operators stood at \$43,03, as compared with $\$ 39.21$ in 1946, \$38. 60 in $1945, \$ 38.05$ in $1944, \$ 36.09$ in 1943 , and $\$ 34.81$ in 1942; the comparable 1939 figure was $\$ 28.68$. During 1947, the earnings of the wage-earners for whom monthly statistics of man-hours were furnished averaged 98 conts, as compared with 87.3 cents in 1946, and 85 cents in 1945 ,

Coal Mining - Largely as a result of prolonped labour-management disputes in 1947, employment in coal mining showed a folling-off, the index number declining from 94.8 in the preceding year to 78.0 in the 12 months under review. The index of payrolls showed a reduction of 12.7 p.c. from 1946, accompanying the loss of 17.7 p.c. in that of employment. The per capita weekly oamings, however, were higher, at $\$ 41.61$, as compared with $\$ 39.03$ in $1946, \$ 38.19$ in $1945, \$ 36.95$ in 1944, $\$ 33.18$ in 1943 and $\$ 31$ ती in 1942. In 1939, the wookly rigure was \$22.10.

The average hourly rate indicated in 1947 was 110.4 cents, as compared with 95.9 cents and 93.8 cents in 1946 and 1945 , respectively. The average hours of work fell from 40 ? in both 1945 and 1946, to 36.9 in the year under reviem, when as alroady indicated, the situation was seriously affected by strikes. The man-days of work lostl/in coal mining as a result of industrinl disputes totalled $1,314,334$, as compared with 43,854 in 1946, and 183,102 in 1945,

Metnllic Ores - The volume of employmont in the larger motal mining industries during 1547 was greater than in preceding, years since 1940, while the index number of payrolls was higher than in any earlier period for which data are available. The woekly salaries and wages of the employees reported averaced $\$ 46.25$. As compared with 1946, there were advances of 11.2 p.c. and 23.2 p.c. in the index numbers of employnent and payrolls, respectively, while the per capita figure showed an increase of 11.1 pic. over that of $\$ 41.63$ in 1946 . The previous annual average week 1 y eamings were: 1945, \$41.02; 1944, $\$ 40.68 ; 1943, \$ 39.70$, and $1942, \$ 38.60$. The comparatile figure in 1939 was $\$ 33.46$. The weekly hours worked by the wage-earners for whom data on marthours were available in 1947 averaged 44.4 , as compared with 45.1 and 45.8 in 1946 and 1945, respectively. The latest hourly rate was 99.4 cents, as compared with 87.4 cents in 1946 and 85 cents a year oarlier.

Non-Metallic Linerals other than Coal. - Fiurther improvement was indicated during the poriod under review in the extraction of miscellaneous non-metallic minerals, associated with contimed activity in construction work. Tho 1947 index of employment was 215.4 , a figure of 17.2 p.c, hiffer than the 1946 index, previously the maximum. In the 12 months, the index of payrolls rose by $23.5 \mathrm{p} . \mathrm{c}$., also to the highest point on record. The salaries and wages disbursed by the 165 reporting employers represented a weekly average of $\$ 36.88$ per person in recorded employment. In 1946, 1945, 1944, 1943 and 1942, the per capita fipures were $\$ 32.77, \$ 32.64, \$ 32.34$, $\$ 30.84$ and $\$ 28.51$, respectively. The comparable figure in 1939 was $\$ 24-17$.

> 3. TRN:SPORTATION.

There was continued expansion in emploment in transportation during the period under review, when the gerieral index reached a now peak, standing at $136 . \Omega$, as compared with 128,4 in 1946. This increase of 6.6 p.e. was accompanied by that of 17.3 p.c in the annual index number of parrolls, which also was the hichest in the $1 /$ "Strikes and Lockouts in Canada during $1947^{\prime \prime}$, prepared by the Department of Labour.

EMPLOYMENT AS REPORTED BY EMPLOYERS IN TRANSPORTATION ESTABLISHMENTS
$1929-1947$

recoma I'Be trand of amploynant man iownward in the first two months of the year under review, anci ugain in the period, Sept. 1 to Nov. l. With these exceptions, chere were general advances from month to month.

The companies and branches furnishing monthly retums on employment and payroils numbered 777 in 1947. The sums paid their omplovees in weekly salarias and Whges averaged $\$ 44.16$. This compared favourably with the per capita figuras of enrlier years, as follows: 1946, \$40.07; 1945, \$38.82; 1944, \$37.07; 1943, \$35.86 and $1942, \$ 34.69$.

Gteam Ruilways. The annual index number of omployment in the oporation dopartments of the steam railways stood at 113.1 in 1947 , exceeding by three poc. the $13 / 8$ itgure of 109.8 , which was previously the maximum in the record. The index of payrolls showed an advance of $13.8 \mathrm{p}, \mathrm{c}$, in the 12 months. The weekly earnings of persons omploved in this eroup averaged $\$ 49.79$, as compared with $\$ 45.03$ in 1946 , $\$ 16.54$ ir $1945, \$ 40.53$ in $1944, \$ 38.79$ in 1943 and $\$ 37.59$ in 1942.

Street Railwars and Cartage and Storage. - Activity in the local transpo:tation and storage industries continued at a high level in 1947, according to data received from 489 leading firms. As compared with 1946 , there were incroases of $7.2 \mathrm{p} . \mathrm{c}$. in the index number of employment, and $18.2 \mathrm{p} . \mathrm{c}$. in that of payrolls, wile the figure of per capita weekly earnings rose by 10.4 p.c. The mean reported in 1947 was $\$ 33.70$; those in 1946, 1945, 1944, 1943 and 1942 , had been $\$ 35.07$, $\$ 34.25, \$ 33.43, \$ 32.59$ and $\$ 31.02$, respectively.

Snipping and Stevedoring - There was a considerable advance in employment in the shipping and stevedoring industry in 1947 as compared with 1946 , when the situation had been affected by labour-management disputes. The latost arrual indox, averaging 119,6 , was $18.1 \mathrm{p}, \mathrm{c}$. above the figure of 101.3 rocorded in the preceding year, since when the index of payrolls had risen by 32.8 p.c. The 191 largor industrialists in these incustries reported a weekly average of $\$ 37.17$ paid in salaries and wages to their employees. In earlier years of the record the per capita fipures wore as follows: 1946. \$32.80; 1945, \$32.15; 1944, \$31.48; 1943, \$31.04, and 2442, 323.29.

## 1. COMMUNICATIOISS.

Since 1939, the movemen: in the communcations division has beon steadily umatd Trum vanr to vear. The anrual index rose by 15.8 p.c. in 1947 from 1946 , when the 1 ifsure had exceeded that of 1945 by 20.7 p.c. The 1947 index, which stood at 164.3, was computed from information supplied monthly by 78 leading, companies and branches. Of the persons on their staffs, 537 per 1,000 were wonen. The salaries und wages distributed weekly by the co-operating firms reprosented \$34.42 per arolove日, the highest ficure in the record. Previously, the per capita figures were $\$ 32.76$ ir $1946, \$ 31,48$ in $1945, \$ 30.81$ in $1944, \$ 29.36$ in 1943 and 828.13 in 1942.

Aecording to data from talarraph companias, employment in that industry was rather brisker, the 1947 anual index, at 138.3 , showing, an increase of one p.c. ove: the $i 546$ firure, accompanied by a grin of $15.3 \mathrm{p}, \mathrm{c}$, in the index number of patyrolls. The average weekly earnings rose by 13 p.c., to $\$ 37.89$ in the year under roview, as compared with $\$ 33.50$ in 1946, and 931.04 in 1945.

1n the tolophone division, statistics received from the leadinp, emplovers shove the highest level of employment in the record of 27.7 vears, the 1947 index, at 169.9 , exceeding by 19.1 p.c. the previous maximum figure of 142.6 in 1946 . This advance was accompanied by a rise of $23.2 \mathrm{p} . \mathrm{c}$. in the index of pryrolls. The weekly salaries and wages averaged \$33.63, Also the peak figure in the period for which iniommion is avajabie. In earlizn yoars of the rocorl, the gverages unere as folloms: 2946, $\$ 32.57$; $1945, \$ 31.621$ 1944, $931.37,1943, \$ 89.84$ and $1962,428.20$.

EMPLOYMENT AS REPORTED BY EMPLOYERS IN CONSTRUCTION ESTABLISHMENTS
1929-1947

## 5. CONSTRUCTION AND MAINTENANCE.

The volume of employment afforded by the larger iirms in the construction and maintenance division in 1947 was greater than in any earlier year, deapite shortages of labour and materials in some areas. The annual index was 152.9, as compared with 129.5 in 1946. The gain in this comparison was $18 \mathrm{p} . \mathrm{c}$. ; that in the index of payrolls amounted to 30.4 p.c. Statements were tabulated from 2,121 leading employers. The men and women on their staffs were paid a weokly average of $\$ 34.86$, as compared with $\$ 31.53$ in 1946 . The trend of employment in construction in the year under review was uninterruptedly favourable from Mar. 1 to Nov. 1 , a period in which the index advanced by 46.4 p.c., to 181.3 at the latter date, when it was 18.6 p.c. above the annual average for 1947 , and exceeded by 19.4 p.c. the index at Nov. 1, 1946.

Building Construction. - Employment in building showed important oxpansi on during 1947 , the index rising from 1946 by 30.8 p.c., to an all-time maximum of 190. S. Previously, the peak fipure was that of 160.2 in 1943 , when much wartime construction work had been in progress. According to data from 1,577 of the larger contractors, there were ten monthly increases in employment in 1947, the general tendency having been downward only at Jan. 1 and Dec. 1 . At the latter date, the index was 36.1 p.c. above the figure recorded at the opening of the year.

The annual index of payrolls in 1947 showed an increase of 44.1 p.c. as compared with 1946, and was also hicher than in any earlier year for which statistics are available. The per capita earnings stood at $\$ 37.41$, as compared with $\$ 33.97$ per week in $1946, \$ 34,03$ in $1945, \$ 34.12$ in $1944, \$ 34.85$ in 1943 , and $\$ 31.20$ in 1942 . The hours reported by leading contractors as having been worked by their hourly-rated wage-earners averaged 39.2 per week in 1947 , as compared with 38.7 per week in 1946. and 40.4 in 1945. The average hourly rate rose from 83.4 cents and 80.9 cents, in those vears, respectively, to 91 cents in the year under review. In connection with the figures of earnings in the construction division, it may be pointed out that large numbers of unskilled and casual workers are employed, as well as many highly. skilled tradesmen.

Road Construction and Maintenance. Activity in road work was accelerated during 1947, when the annual index of employment showed a rise of 15.2 p.c. over 1946 , bringing the most recent figure to 179.2. This was the highest since 1939。 The payroll index advanced by $26.2 \mathrm{p} . \mathrm{c}$. in the vear, the 1947 figure also being the maximum in the monthly record of payrolls, which commenced in 1941. The firms from which statistics were received in 1947 numbered 512. The sums which they paid in weekly salaries and wages averaged $\$ 31.61$ in 1947 , as compared with \$29. 11 in 1946 , $\$ 27.77$ in 1945, \$27.73 in 1944, \$25.73 in 1943 and $\$ 22.91$ in 1942 . The hours worked by wape-earners in this industry for whom statistics of man-hours are available averaged 39.3 per week in 1947, as compared with 37.7 in 1946 and 36.7 in 1945. The averape hourly rate was given as 70.7 cents in the year under review, when the figure exceeded those of 65.7 cents and 63.2 cents indicated in 1946 and 1945 , respectively.

Railway Construction and Maintenunce. - A slight falling-off was noted in employment in railway construction and maintenance work in 1947, there being a decline of 0.9 p.c. In the annual index, which stood at 87.9 , the lowest since 1941. In spite of the fractional reduction in this figure, there was an increase of 10.8 p.c. as compared with 1946 in the index number of payrolls. The average earnings were $\$ 35.11$ per week, the peak in the record of over six years. The preceding per capita figures were as follows: 1946, \$31.40; 1945, \$28.87; 1944, \$27.73; 1943, \$26.01 and $1942, \$ 23.87$.

EMPLOYMENT AS REPORTED BY TRADING ESTABLISHMENTS
$1929-1947$

## 6. SERVICHIS.

Statistics of employment and payrolls were furnished monthly in 1947 by 1,015 of the larger establishments in certain branches of the service incustries, notably hotels and restaurants and laundries and dry-cleaning plants. Ine weekly earnings of the employees of the comporating firms averaged $\$ 23.48$. As compared with 1046, there were increases of 7.1 p.c. and 17.8 p.c. in the annual index numbers of employment and payrolls, respectively, whilo the average earnings rose by 11.5 p.c. In earlier venrs for which information is nvailable, the annual weekly averages wore $\$ 21.06, \$ 19.97, \$ 19.41, \$ 18.58$ and $\$ 17.37$ in $1946,1945,1944,1543$ and 1942 , respectively. Comparison of these figures with those in other industries requires
consideration of the fact that, normally, large numbers of part-time workers are omployed in hotels and restaurants and also in laundries and dry-cleaning establishments, while the proportion of women workers in these classes is particularly larpe. In 1947, the ratio of such employees was 534 per 1,000 workers of both sexes on the staffs of the larper firms. In 1946, the indicated proportion of women was 555 per 1,0n0. The general ratio in the nine major industries in the year under review was 223 per 1,000 , as compared with 234 in the 11 months of 1946 in wich information on sex distribution was collected. It was also be recalled that the statistics of current earninģs do not make allowance for the value of hoard and lodging, frequently provided persons employed in the hotel and restaurant group.

During 1947, the average hourly eaminps of the hourly-rated wagomenrners reported in the service industries stood at 52.3 cents, as compared with 46 cents in 1046, anc 43 cents 12 months earlier.
7. TRADE.

Continued expansion in employment was reported in loading merchandising establishments in 1947. The anrual incex was then 207.1, the highest in the record. The 1046 figure was 191.2. The increase in the vear, which amounted to 8.3 p.c., was accompanied by that of 18.5 p.c. in the index number of payrolls, also the maximum in the period for which information is available.

Tho co-operating firms numbered 3,321 in 1947, when their omployees were in the proportion of 594 men and 406 women per 1,000 persons on the staffs. The weekly salaries und wages distributed by these establishments provided their workers with a per capita figure of $\$ 31.29$. This was 10 p.c. above the 1946 mean of $\$ 28.45$. In earlier years of the record, the averages were $\$ 26.85$ in $1945, \$ 26.21$ in 1944 , $\$ 25.23$ in 1943 , and $\$ 24.07$ in 1942 . The considerable increase in the weekly oarnings In 1947 was due in part to upward revisions in the salary and wage rates, but also resulted in part from higher commissions on sales, resulting from improved supplies of consumers' goods.

The index number of employment in retail trade showed a gain of $7.8 \mathrm{p} . \mathrm{c}$. in the 12 months, while that of payrolls advanced by 18.1 p.c. The ratio of women in the working forces reported by 2,116 of the larger retailers during the year under review was 474 per 1,000 . The omplovees on their pay lists recoived a wookly average of $\$ 28.99$, as compared with $\$ 20.33$ in 1346 , $\$ 24.62$ in $1945, \$ 24.03$ in 1944 , $\$ 23.08$ in 1943 , and $\$ 22.08$ in 1942. It will be recalled that many part-time workers are omployed in retail stores, a fact which has an important effect upon the feneral per capita figure in the industry.

The trend of employment in retail trade was penerally favourable on ten monthly occasions in 1947, althnugh the increase from Jan. 1 to Dec. I was not equal to that indicated in a similar comparison in 1946. Greater improvemont was shown during the year in employment for men workers than for women, there being a rise of $3.3 \mathrm{p}, \mathrm{c}$, in the 12 months among workers of the latter sex, and of $11.7 \mathrm{p} . \mathrm{c}$.
antong wera.
Wholesale trading houses reportod a 10 p.c. increase in eraploment, in 1047 over 19.6, bringing the latest annual index to an all-time high of 191.7. Statistics were tabulated from 1,205 estahlishments in which wonen morkers constituted only 234 per 1,000 persons of both sexes. The 1947 index of payrolls, the hiphest in the record, was 10.4 P.c. ahove the ficure indicated 12 months earlier, previously the sa ximum.

## 8. Buthice

Whers was expansion in employment in financifl institutions during most sumthas ce 1947 , although the gain of 7.3 p.c. in the annual index number was smalley than that of 10,2 p.c. indicated in 1046 over 1845 . it 154.3 , the latest fipure was the maximum in the record of about eirht vears. The indox number of veekly navolls was Hlso the penk figure so far irnicated, exceeding that in 1346 by 13.8 p.c. The sums whioh the 967 co-operatinf, omplovers in these industries paid in weeklv salaries and wages represented an avernce of $\$ 37.09$ per person on thoir stofés. Barlier averapes were \$34.85 in 1946, \$33.51 in 2 ci45, 632.35 in 1944 and \$31. 18 in 1943.
of the employees reported monthly ciuring 1947, women canstituted 462 per 1,007 persons on the pay lists of the leading financial organizations. This ratio was considerably smallor than that of 486 rocorion in 194C, but nevertheless exceeded the feneral proportion of somen reportes in the minc majo inustrial divisions in the sane period.

## 

Watis 3 fives monthly index numbers of emploment ine tho mais industrial Smome In the last three years, together ofith ammal averages $1 /$ since 1926 , while the trends of omplowment in some 60 industribs wonthly iuring 1547 appear in Table 4. In thesc tables, the columns hoaded "relative weight" show the purcentage distribution of the employees for whom statistics were availuble in the vaiious inciustries at dune 1; the averame numbers reportod in leadins incustries in 194 are fiven in Table II on page 4.

##  GROUPS IN TUE BCOMOIC hRIEAS.

Bxoent 4a flopa sotia, there were increnses in the general index numbers of employsent in all provinces in 1947 as compared with 1946 . The rains ranged from $4.5 \mathrm{p} . \mathrm{c}$. in limitoha and $5.3 \mathrm{p} . \mathrm{c}$. in suskatchewan, to $9.2 \mathrm{p} . \mathrm{c}$. in Ontario and 16.3 p.c. in British Columbia. In reprai to the lattor alvances, it will be recalled that labour-managemont disputes in Ontario and British Columia hat has a particulerly marke? effect upon the incustrial situation in lsc\%. The palling-off in liova scotia during the vear uncor review resulted in part from the prolonfed strife in the coal
 workinf days in that proviros.

1047 thar ir 1940, in most prorinces, the reporte disbursoments in salaries and
1/ Detailed irdexes ior carlicr years may be obtained on aplication to the Dorinion Bumpau of statistics
2/see exn? anatory nictes on pages I was II.
wages also exceoded those indicated in any earlier year. The exception was Nova Scotia, where the latest annual index was 2.3 p .0 . above the 1946 figure, but was lower than in the period, 1943-1945.

The annual averages of per capita weokly earnings of employees reported by leading firms in the major industrial provinces reached new all-time high levels in 1947. In the comparison with 1946, there were advances ranging from 5.8 p.e. in Nova Scotia, and 7,7 p.e. in Prince Edward Island, to 10.8 p.c. in lew Brunswick and Quebec, and 13.6 p.c. in Ontario. The general rise in the Dominion as a whole was 11.6 p.c.

The trend of employment in manufacturing in Prince Edward Island and Nova Scotia was downward in the year under review as compared with 1946. In the remaining provinces, moderate expansion was shown in manufacturing, togother with relatively larger increases generally in the non-manufacturing classes. Activity in manufacturing continued below war-time levels, but that in the other divisions for which data are available was hich in all soctions of the country. Chart 17 depicts the movements in employment in manufacturing in the five economic areas and in Canada as a whole during a lenpthy period.

The following paragraphs deal in some detail with the situation reported in 1947 by establishments usually emploving 15 persons and over, in the main industrial divisions, in the various areas and provinces.

## 1. MARITIIS PROVINCES.

The annual index number of employment in the Maritime Provinces as a whole showed little change from 1946. At 173.2, the latest figure was higher by only $0.5 \mathrm{p}, 0$, than that recorded a year earlier, and was otherwise the lowest recorded since 154l. Following the settlemont of the dispute in the coal fields in the early summer, however, the situation showod almost unintermupted improvement, and from July l, the index each month was higher than at the same date a vear earlier. Then the 1947 penk of 193.3 was renched at Nov. l, the figure was higher than in any preceding month since the latter part of 1943.

On the whole, there was a minor revession in 1947 in manufacturing in the llaritime provinces taken as a unit. This resulted mainly from curtailment in the iron and steel livision, in which the index showed a decline of 8.8 p.e., partly but not entirely due to the strike of coal miners. Moderate advances were indicated, however, in lumber, pulp and paper, textile and other branches of manufacturing, Lofging, comunications, constmaction and maintenance and trade also showe? improvement, but there were reductions in mining (largely as a result of the lengthy dispute in the coal fields). Transportation showed a small loss. Activity also diminishod slightly in those branches of the service industries for which data are available.

The minor increase in the peneral index number of employment in the liaritime Area in 1947 was accompanied by a lareer advance in the index number of payrolls, which rose from 1946 by 8.8 p.on. to an all-time maximum.

The anmal averase weekly earmings, at $\$ 32.80$ in 1947 , exceeded the 1946 per capita figure of $\$ 30,37$ by eight p.c. ard was 7.3 p.c above the previous peak figure of \$30.42 recorded in 1945. From June 1, 1941, when the monthly payroll series was commenced, the average weekly earnings of persons employed by 1,299 of the larger industrialists in the Maritime Provinces have advanced by 54.1 p.c. The general increase in this comparison in the Dominion was 43.2 p.c. in $194 \%$

Prince Edward Islanio- The general index number of employment in Prince Edward Island showed an increase of 7.7 p.c. in 1947 from 1946, standing at 143.9, as compared with 133.6 in the preceding year. During the war, the maximum figure was that of 132.9 , in 1944. The trend was downard in the first quarter of the year under review, after which there were steady increases from month to month, with only one exception. At the 1947 peak, the index was 19.3 p.c. above its position at the same date in 1946, and exceeded by 32.5 poc . the 1947 annual low of 124.0 , at Mar. 1. These index numbers are computed from monthly data supplied by 69 leading firms in the major industrial divisions.

The weekly payrolls disbursed by the larger industrialists in 1947 were higher by 15.6 p.c. than in 1946, when they had, in turn, exceeded those indicated in 1945 and earlier years of the record. The average weekly earnines also reached a new all-time high in 1947, standing at $\$ 29.42$, compared with $\$ 27.31$ in 1946 , $\$ 26.30$ in 1945, \$26.06 in 1944, \$24.01 in 1943, and \$21.91 in 1942. From June 1, 1941, when the payroll series whs introduced, the average weekly salaries and wages reported in this province showed an advance of 36.8 p.c. During 1947, there were rather small declines in activity in manufacturing, but the non-manufacturing industries showed moderate improvement.

Nova Scotia. - The situation in Nova Scotia was affected to an important extent in $\overline{1947 \text { by prolonged labour-management disputes in the coal fields, Largely }}$ though not entirely as a result of this factor, the general index fell from 172.3 at Feb. 1, to 138.1 at Mar. 1, when it was lower than in any other month since Jan. 1, 1941. Following the settlement of the strike in the early sumner, there were steady increases each month until Nov. 1. At 201.4, the index was then higher by 19.2 p.c. than at Jan. 1, and exceeded by four p.c. the Nov. 1, 1946, figure. The annual index, computed from material furnished by an average of 686 leading firms in the major industrial divisions, stood at 173.6, as compared with 180.2 in 1946, 192.4 in 1945, 199.3 in 1944, 203. 1 in 1943, 196.1 in 1942 and 170.9 in 1941.

The index number of employment in manufacturing in 1947 was 3.9 p.c. lower than in 1946, when activity was greater in iron and steel, animal food and other factories. In part, the losses in the year under review were due to industrial disputes. As already indicated, the strike of coal miners in 1947 was a factor of considerable importance, causing large declines in employment, working hours and earnings. Transportation and wholesale trade showod some falling, off in Nova Scotia in the vear under review, Construction and retail trade, however, reported improvement.

Although the annual index nuaber of employment was 3.7 p.c. below its 1946 level, the index of payrolls showed an increase of $2.3 \mathrm{p} . \mathrm{c}$. in the 12 months; with this exception, the 1047 figure was the lowest in the record of $6 \frac{1}{2}$ yoars. The amounts disbursed in weekly salaries and wages by the reporting establishnents in liova Scotia during 1947 averaged $\$ 32,49$ per employee. This compared favourably with the per capita figures indicated in preceding years for which data are available, as follows:- 1946, \$30.71; 1945, \$31.56; 1944, \$31.88; 1943, \$29.31, and 1942, \$26.11. During, the period in which the monthly statistics of payrolls have been prepared ( $i_{0} \theta_{0}$, from June 1, 1941) the average weekly earnings of personsemployed by the larger industrial establishments in Nova Scotia have advanced by 49 p.c. This rate of gain exceeded the general proportion of $43.2 \mathrm{p}, \mathrm{c}$. indicated in Canada as a whole in 1947. As indicated above, the annual per capita earnings reported in Nova Scotia in 1947 were higher than in any earlier year, but the monthly figures were below the all-time maximun of $\$ 33.93$ indicated at Mar. 1, 1945.

New Brunswick - The index number of employment in New Brunswick in 1947 averaged 17407 , the highest figure in the record, showing a moderate increase over the annual index of 164.2 in 1946. Previous ly, the maximum was 165.5 in 1945. With
on ly four exceptions, the trend from month to month in the year under review was favourable; by Oct. 1, the inclax was $3.9 \mathrm{p} . \mathrm{c}$. above its level at the opening of the year, and $6.8 \mathrm{p} . \mathrm{c}$. higher thar at the same date in 1946.

Accompanying the increase of 6.4 p.c. in the 1947 anmual index of employment was a rise of $18 \mathrm{p} . \mathrm{c}$. in that of payrolls as compared with a year earlier, when the figure was hipher than any previousiy reported. At $\$ 33.33$, the per capita weokiy earnings of persons employed by 544 leading firms in the eight major industries in New Brunswick were also the maximun in the record, exceeding by 10.9 p.c. the 1946 annual average, and by 62.8 p.c. the average indicated when the serios was instituted at June 1, 1941. The increase in the latter comparison was substantially above that shown in the same comparison in any other province. The weokly average in New Brunswick was nevertheless below the Dominion figure of $\$ 36.15$ in 1947. As has been pointed out on earlier occasions, the lower average in this province is partly associated with the industrial distribution of the workers in recorded employment, there being unusually large numbers engaged in logging and lumbering, and in certain other industries in which the rates tend to be lower-than-average. In connection with the logging group, it should be mentioned that the statistics of earnings do not make allowance for the value of board and lodging, often provided by employers in this industry.

Improvement was noted during 1947 in manufacturing, the trend from 1946 being favourable in the lumber, pulp and paper and other divisions. No general change was shown in iron and steel plants. Logging, transportation, building construction and retail trade also afforded more employment.

## 2. Quebec

There was an increase of 8.2 p.c. in the index number of employment in Quebec in 1947 as compared with a year earlier. Lower than in 1944 or 1943, the latest annual figure was otherwise the highest in the period since 1920. From the low point of 182.2 at May 1, the index steadily advanced to its high position of 205. 6 at Dec. 1, when it was 6.7 p.c. above the Dec. 1, 1946, figure of 192.7, and exceeded by 10.1 p.c. the index recorded at Jan. 1, 1947. The advance in the latter comparison was not equal to that of 12.2 p.c. shown from Jan. 1 to Dec. 1 in 1946. The latest annual index number was computed from information received monthly by an average of 4,741 of the larger establishments in the eight leading industries.

With accelerated industrial activity and rising wage and salary rates, the $196^{9}$ index number of aggregate weekly payrolls increased by 20.1 p.c. from 1946 , to an all-time high in the period for which the current statistics are available. In the preceding year, the losses due to industrial disputes hed had a more serious artect ipon the earnings than in 1947.

The weekly salaries and wages reported in Quebec in the 12 months under review averaged $\$ 34 . \epsilon 4$, as compared with $\$ 31.24$ in $1946, \$ 30.73$ in 1945, $\$ 30.22$ in $1944, \$ 29.06$ in 1543 and $\$ 26,7 C$ in 1042. In the year, the per capita flgure rose by 10.5 p.c., while the advance since June 1. 1941 , when the payroll record was comenced, amounted to 47.8 p.c. The increase in the latter comparis on was aboveevarage, the general rise in the Dominion average being 43.2 p.c.
: :anufacturing generally in Quebec during 1947 was brisker than in 1946, the anaus? index of emplovment rising by 5.9 p.c., from 191.0 in that year, to 202.3 in the period under review, when it was lower than the index in 1945, 1944 or 1943. There were moderate advances each month from January to Oct. 1 , when a small fractional decilne was noted. The trend was again favourable at Nov. l, while the Dec. I figure was only slight lower than in the preceding month. Improvement was indicated in lumber, pulp and paper, textile, fron and steel and other factorios. The increanes in these divisions ranged from $3.2 \mathrm{r} . \mathrm{c}$. in lumber products. to $7.3 \mathrm{p}, \mathrm{c}$. in the falp and paper: groco. Tho majer non-manulactining olaseas also showec a highar

# COMPARISON OF EMPLOYMENT TRENDS <br> INTHE <br> MANUFACTURING INDUSTRIES <br> IN THE <br> FIVE ECONOMIC ARE AS AND THE DOMINION AS A WHOLE 

Level of activity in 1947 as compared with 1946. The advances in the index numbers were as follows: logging, 11.9 p.c.; mining, 9.5 p.c.; communications, 17.9 p.c.; transportation, 6.9 p.c.; construction, 22.9 p.c.; hotels and restaurants and laundries and dry-cleaning plants, 5.5 p.c., and trade, 8.4 p.c.

During, 1947, there was an advance of $12.5 \mathrm{p} . \mathrm{c}$. in the average hourly arnings reported by leading manufacturers in this province on behalf of the wagesarners of whose hours they kept record. The average was then 72.7 cents, as ocmpared with 64.4 cents in 1946, and 64.1 conts in 1945. The month-to-month zovement was generally in an upward direction, the rate risinc from 69.2 cents per hour st ian. 1, 1947, to 77.2 cents at Dec. 1.
3. OMTARIO.

A seciced diminution in 1947 as compared with 1946 in the amount of thac lost as a result of industrial disputes was one of several factors combining to p:oduce an increase of $9.2 \mathrm{p} . \mathrm{c}$. in the latest annual index number of employment in ontario. At 194.1 , this was the highest figure in the record, exceeding by 4.5 p.c. the previous peak index of 185.8 in 1943. The trend was sliphtly downward at Jan. 1 anc May l, and again at Sept. 1. With these exceptions, the situation showed steady though generally moderate improvement during the year. The 1947 indexes were computed from figures furnished by an average of 7,272 of the larger industrial employers in the province.

The amounts currently distributed in weokly salaries and wages by leading establishments reached the highest level on record during the year under review, when the monthly index numbers of payrolls averaged 164.9, on the June 1. 1941, base as 100 . This was 24.3 p.c. higher than in 1946 , and exceoded by 19.3 p.c. the previous maximum ficure of 138.2 , indicated in 1944. The advance in Ontario in the 12 months' comparison was above the general average, although it was not quite so large as the increase shom in the same comparison in British Columbia, which like Oxtario, had heen particularly affected by labour-management disputes in 1946.

The weokly earnings of salaried emplovees and wage-earners on the staffs of the larer emplovers in the major industrial divisions in the year under review averaged $\$ 37.11$, as compared with $\$ 32.68$ in $1946, \$ 32.49$ in 1945, \$32.78 in 1944, $\$ 31.82$ in 1943, and $\$ 29.88$ in 1942. The rise in 1947 over the preceding 12 months arounted to 13.6 p.c., a proportion which exceeded the Dominion-wide increase of 11.6 p.c. As compared with the figure recorded at June 1, 1941, when the series wes instituted, there was a gain of $38.2 \mathrm{p} . \mathrm{c}$. in the general per capita figure in Ontario. This advance was rather smaller than the increase of 43.2 p.c. in the same comparison in Canada as a whole in 1947.

A Drief review of the material available for the various industries in Cuturin aios: general expansion in activity in the manufacturing and the non-manufacturing classes. The increasos in the annual index numbers of employment ranged from 5.7 p.c. in the hotels and restaurants and laundry and dry-cleaning group, 7.3 p.c. in transportation and aight p.c. in trade, to $11.1 \mathrm{p} . \mathrm{c}$. in logging, $16 \mathrm{p} . \mathrm{c}$. in construction and 19.7 p.c. in communications. Recorded employment in manufacturing as a whole mounted by 8.4 p.c. from 1946, but was lower than in the period, 1942-1944. when wartime activity had reached an extremely high level. In the 12 months' comparison, improvement was indicated during 1947 in lumber, pulp and paper, textile, iron and steel and other classes of manufacturing.

From 71.3 cents in 1945 and 72.1 cents in 1946, the average hourly earnings of the hourly-rated omployers of leading manufacturers in Ontario rose to 34. 2 cents in 1947. At Dec. 1, the general figure was 90.2 cents, as compared with 79.8 cents at Jan. 1. During the year, there were considerable increases in the averages indicated in practically all branches of manufacturing, and also in the non-

$$

- 43 -
manufacturing divisions. Within the latter category, the average earnings in building in Ontario stood at 93.7 cents per hour in 1947, as compared with 85.3 cents in the preceding 12 months, and 83.1 cents in 1945.

## 4. PRATRTE PROVINCES.

A new all-time high level of industrial omployment was established in the Frairie Area as a whole during 1947, when the annual index exceeded by $5.4 \mathrm{p} . \mathrm{c}$. the previous peak figure recorded in 1946. The accompanying advance in the index number of payrolls was 15.5 p.c., also resulting in a new maximum figure. The index numbers remoct the situation reported by 2,442 of the larger emplovers in the major industrial divisions. The average weokly salaries and wages paid their employeos averaged $\$ 36.46$ in 1947, when the mean was higher than in any earlier year of the record, as follows: 1946, \$33.28; 1945, \$32.30; 1944, \$31.59; 1943, \$30.32 and 1942, \$28.80. The increase in the average as compared with 1946 was 9.6 p.c.; since the record was commenced at June 1, 1941, a rise of 39.2 p.c. was shown in the average weekly earnings of persons on the payrolls of the larger industrialists in the Prairie Area.

There was a one p.c. increase during 1947 as compared with 1946 in the annual index number of employment in manufacturing. The latest figure was practically the same as in 1945, but was rather lower than in 1944 or 1943. With these excoptions, the 1947 index of 179.5 was the highest in the record. Largely as a result of industrial disputes, there wero declines in the animal food industries, but improvement was recorded in the lumber, pulp and paper product, textile, iron and steel and other divisions during 1947. Logging was quieter than in 1946, while heightened activity was generally indicated in mining, transportation, comurications, construction and maintenance, hotels and restaurants and trading establishments. The largest percentage advance in the year was that of 11.7 p.c. in construction.

Manitoba.- The annual index number of employment in Manitobe in 1947, at 154.3, showed a gain of 4.5 over the 1946 figure, until then the highest in the record. The index number of payrolls, also the maximum figure in the period for which data are available, was 14.5 p.c. above its 1946 level. The average weekly salaries and wages of persons employed by the 052 larger firms co-operating in the monthly surveys stood at $\$ 36.23$ in 1947 , as compared with $\$ 33.07$ in 1946, $\$ 32.04$ in 1945, $\$ 31.06$ in 1944, \$29.90 in 1943, and \$28.71 in 1942.

There was a slight increase in employment in manufacturing in Manitoba during 1947; largely as a result of the meat-packing strike, activity was generally lower in the animal food industries taken as a whole, but the vegetable foods, textiles, pulp and paper, iron and steel and other branches of manufacturing, afforded more employment than in 1946. Transportation, construction, hotels and restaurants, and trade also showed improvement in Manitoba.

Saskatchewan. - According to statements received from 582 leading employers in the major industrial divisions in Saskatchewan, there was a further moderate gain in employment in 1947, when the annuml index, at 157.0 , was 5.3 p.c. higher than in the preceding year, proviously the all-time peak figure. The latest index of weakly payrolls was 15.3 p.c. higher than in 1946 , while the average weokly salaries and wages paid the persons in recorded employment rose by 9.8 p.c. in the 12 months. The per copita earnings stood at $\$ 35,57$, as compared with $\$ 32.41$ in 1946. In earlier years for which data are available, the weokly averages were as follows: 1945, \$31.02; 1944, \$30.23; 1943, 营29.07 and 1942, \$27.58.

Little general change in the level of activity in manufacturing was indicated in Saskatchewan in 1947 as compared with the preceding 12 months. The prolonged dispute in the meat-packing industries resulted in a decline in the animal food division. Other branches of manufacturing, however, showed a moderately upward movement. The non-manufacturing classes for which data are avoilable reported

$$

expansion as compared with a year earlier; the gains were not particularly marked.
Alberta.- The trend of industrial employment in Alberta was favourable during 1947, there being an increase of 6.6 p.c. in the annual index of employment, and of $16.5 \mathrm{p}, \mathrm{c}$. in the index of payrolls as compared with 1946. The most recent figures were the highest in the periods for which statistics are available. The general index of employment, which stood at 181.5, was computed from data furnished monthly by an average of 908 of the larger firms in the province. The weekly earmings of their salaried staff and wage-earners averaged $\$ 37.27$, showing an advance of 9.4 p.c. from 1946 , and of 41.6 p.c. during the period in which monthly returns on payrolls have been made, i.e. from June 1, 1941. The per capita figures in 1946, $1945,1944,1943$ and 1942 , were $\$ 34.06, \$ 33.41, \$ 33.05, \$ 31.65$ and $\$ 29.62$, respectively.

The annual index number of employment in manufacturing in Alberta in 1947 was practically the same as in 1946. In this province also, the situation in the year under review was adversely affected by the dispute in the meat-packing industry. Iron and steel, vegetable food and other factories afforded rather more employment. Transportation, construction, hotels and restaurants and wholesale and retail trade also showed improvement.

## 5. BRITISH COLUMBIA.

The volume of industrial employment in British Columbia was greater in 1947 than in any earlier year for which data are available, there being an unusually high level of activity in the non-manufacturing industries, together with considerable recovery in manufacturing. At 193.7, the annual index exceeded by 16.3 p.c. the general figure in 1946 , which had been lowered not only by lessened war work, but also by important industrial disputes. The most recent index was 1.9 p.c. above the previous maximum figure of 190.0 , recorded in 1943. The trend was uninterruptedly favourable from Jan。1 to Sept. 1, 1947, after which there were losses. These, however, reduced the index only from 207.5 at the latter date to 202.6 at Dec. 1, when it was 9.8 p.C. above the index at the same period in 1946 。 The weekly salaries and wages disbursed by the 2,128 larger employers in the major industrial divisions whose statistics were compiled monthly in 1947 showed an impressive gain from 1946, amounting to 27.3 p.c. This brought the 1947 index number to the maximum in the record. The average earnings per person employed by the leading establishments also reached a new all-time high, standing at $\$ 38.74$, as compared with $\$ 35.30$ in 1946, \$34.82 in 1945, \$34.63 in 1944, \$34.52 in 1943 and $\$ 31.28$ in 1942. The general per capita figure in British Columbia in 1947, which was higher than in any other province, exceeded the Dominion average by 7.2 p.c.

There was a rise of 10.9 poc. in the index number of employment in manufacturing in British Columbia in 1947 as compared with 1946, accompanied by that of 21.4 p.c. in the annual index of payrolls. In part, the higher figures were due to the fact that losses resulting from industrial disputes were on a much smaller soale than in the preceding 12 months. The most recent index number of factory employment was lower than those indicated in the years, 1942-1945, but was otherwise the maximum in the record. Iron and steel plants showed lessened activity as compared with 1946, but the trend was upward in that comparison in the lumber, pulp and paper product, textile, vegetable food, non ferrous metal and other divisions. The levels of employment in the major non-manufacturing industries were generally higher in 1947, when improvement over 1946 was shown in mining, communications, transportation, hotels and restaurants, launderies and dry-cleaning plants, construction, and trade. The increases in these groups ranged from 11.7 p.c. in communications and 13.5 p.c. in trade, to $28.7 \mathrm{p} . \mathrm{c}$. in construction and $39.2 \mathrm{p} . \mathrm{c}$. in logging. In regard to the advance in the latter industry, it will be recalled that activity in 1946 had been greatly affected by prolonged labour-management disputes in the lumbering industries

## EMPLOYMENT AND PAYROLLS

IN EIGHT LEADING INDUSTRIES EXCLUDING AGRICULTURE MONTREAL, QUEBEC

```
JUNE 1941=100
```

in the province.
During 1947, the average hourly oarnings of the hourly-rated personnel reported by leading manufacturers stood at 96.3 cents, as compared with 84.1 cents in 1946, and 83 cents in 1945. At the 1947 maximum at Dec. 1, the figure was 103.3 conts, as compared with 91.4 cents at Jan. 1. The month-to-month movement during, the year was almost uninterruptedly upward.

## IV.- EMPLOMIENT AS REPORTED BY LFADING FIRMS ${ }^{1 /}$ IN THE MAJOR INDUSTRIAL GROIPS in the larger cities.

1. General.

Since the early nineteen twenties, monthly statistics of employment have been segregated for the eight centres in which the populations exceed 100,000 , vizo, Montreal, Queboc, Toronto, Ottawa, Mamilton, Windsor, Winnipeg and Vancouver. Commencing in the spring of 1941, comparable data on weokly salaries and wages and average earnings have also been available for these metropolitan areas. From the summer of 1944, the record for the leading cities was extended to include the 12 centres in which the populations range from 35,000 to 100,000 .

During 1947, the firms co-operating in the eight larger industrial centres employed $43.2 \mathrm{p} . \mathrm{c}$. of the total personnel of the reporting establishments throughout Canada, while the eamings of such persons formed 42.8 p.c. of the Dominion total of salaries and wages disbursed by leading employers in the major industrial divisions. The proportions do not greatly differ from the 1946 ratios of 43.4 p.c. in the case of the employees and 43.2 p.c. in the case of the payrolls. They show a decline as compared with 1944, when the proportions, then at the poak, had stood at 46.1 p.c. in the case of employment, and 46.7 p.c. in the case of the payrolls. In 1939, 42.2 p.c. of the employees included in the monthly surveys had been reported by firms in the eight larger metropolitan areas.

As already indicated, there was an increase of $8.5 \mathrm{p} . \mathrm{c}$. in the general index number of employment in Canada in 1947 as compared with 1946. A composite index for the eight cities with populations exceeding 100,000 shows an advance of 7.7 p.c. in the same comparison, while the rise in industrial employment in the smaller centres and the rural areas amounted almost to nine p.c. From the wartime peak, recorded in 1943, the Canada figure in 1947 had risen by 2.1 p.c., but the index for the larger cities taken as a unit had fallen by 4.6 p.c.

The trends of employment in the last 19 years in the major industrial divisions in Canada as a whole, in the larger centres and in the remaining sections of the country are indicated in Table VI. A feature of the table is the comparatively high degree of similarity in 1946 and 1947 in the general index numbers in the Dominion, the more populous cities and the other parts of Canada, as compared with the situation revealed in the figures during the war and in prewar years.

The concentration of recorded employment for women in the larger centres of population at Oct. 1, 1946, was slightly more marked than at the same date in 1947, the proportion then being 57.6 p.c., as compared with 58.5 p.c. in the former yoar. When employment for fomale workers was at the wartime poak, at Oct. 1, 1944, the ratio in the eight leading cities was 59 p.c. At Oct. 1, 1947, 38.9 p.c. of the total number of men reported by the co-operating firms were employed in these centres. This proportion was the same as that indicated a year earlier.

Annual index numbers of employment in the last four yoars are given
in Table VII for specified industries in the eight largest centres taken as a unit, as compared with those for Canada as a wholo. (1926=100)

The increase in the $1: 47$ annual index in manufacturing, over the 1946 figure amounted in the case of the larger cities to 5.7 arc. a proportion which was rather smaller than that indicated in other parts of the country; the general advance in the Dominion was 6.3 p.c. In the buldine, industry the prowth in the cities from 1040 was also loss than that in other parts of the country. The improvement in communicntions, however, was rather reater in the larger metropolitan areas, while the percentare increases in the remaining industries for which data appear in the table were quite similar.

During 194\%, the index number of aiscreante meokly payrolls in the leryor centres averared 170.1 , as compared with 142.0 in 1945 ; these index numbers are based on the dishursements of the co-oparating employsers at June 1, 1941, as 100 p.c. The incrase in the 12 months amounted to $19,5 \mathrm{p} . \mathrm{c}$. as compared with the gain of 21.2 p.e. recorded in the same comparison in Canada as a whole.

The weokly earnings of persons emploved by leadine fims in the larger municipalities averaged $\$ 35.35$ in the year under review, as compared with $\$ 32.26$ in 2966, 832.22 in 1945, and $\$ 32.20$ in 1544. The increase in the year was 11.1 p.c., as compared with a rise of 11.5 p.e. in the peneral figure for Canada. The latest per capita figure was lower by 30 cents than the general averago of $\$ 36.15$ in the Domirion. This was due to severai factors, among which may be mentioned the concentration of women workers and of part-time workers in the motropolitan areas, differences in the industrial distributions, and a tendency towards shorter workine, hours than in other parts of the country.

Tho following parapraphs deal briefly with the situation reported in 1547 in the eirgt largest cities. The trends of employment and payrolls in the 12 cities of medium size are then dealt with in succeeding pares. Table I on Parge 2 of this Annual Review shows the annual averares of the employoes and the weokly salaries and wages reported monthly by leading establishments in the larger cities in 1047, torether with indox numbers of employment and payrolls, and annual average per capita fizures in the last four years.

## 1. MOTTYRAT.

Inprovement in the situation as compared with 1946 was indicated by 2,698 leading firms in the major ind strial divisions in this city durinf 1047 , when industrial activity also reached a higher level than in 1345. The increase in employment in the 12 months' comparison anounted to $6.3 \mathrm{p} . \mathrm{co}$, and was accompaniod by a rise of $16.1 \mathrm{p.c}$. in the index number of payrolls. The latter indox was the maximum in the period for which data are available, exceeding by 4.4 p.c. the previous peak figure recorded in 1944.

With only two exceptions, the month-to-month trend of employment was favourable throxphout 1947. At the beginning of December, the index was 6.7 p.c. higher than at Jan. 1.

Loadinf firms in the manufacturing division reported a hicher level of activity throughout the year under review than in 1946, there being a pain of 3.7 p.c. in the annual index for 194?, which stood at 191.0 , as compared with 184.2 in the preceding 12 morths. The latest figure, however, was lower than in the period of intensified production of munitions, in the poriod, 1942-1945. During, 194\%, moderate increases in the personnel were reported in many branches of manufacturing, notably in food, printing and publishing, textiles, tobacco, beveraces, etc. The exception was the iron and steel group, in which employment declined by $2.3 \mathrm{p} . \mathrm{c}$. , on the avorape, as compared with 1946.

Among the non-manufacturing classes, commications, transportation, construction and trade reported expansion ir the year under review. The gains in

these groups were as follows commuications, 17.9 p.c.; transportation, 8.7 p.c.; construction, 26.6 p.c., and trade, 8.8 p.c.

The per capita weekly earnings of persons employed by the larger industrialists in Montreal stood at $\$ 34.92$ in 1947, when the fipure was $9 . \rightarrow$ p.c. higher than in 1946. In the period in which monthly statistics of averne weokly earnings have been collected, (i.e., since June 1, i941), the figure has risen by 41.8 p.c. In earlier years of the record, the per capita figures were:- 1946, \$31. S 2 ; 1945, \$31.95; 1944, \$31.64; 1943, \$30.50, and 1942, \$27.97. The movement in the average earnines in 1947 was staadily upwarc from Jan. 1 to June 1. Following a slipht recession at July 1, the upward trend was resumed at Aug. 1, continuing without interruption to Dec. 1. The fipure was then 10.7 p.c. hipher than at Dec. $1,1946$. The average hourly earnings reported in manufacturing, in this city in 1947 were $7 \% .1$ cents. During the yoar, the figure rose from 74.2 cents at Jan. 1, to 81.4 cents at Dec. 1. The 1946 average was 69 cents, and that in $1945,69.5$ cents.

## 2. QUEBEC CTTY.

The index number of employment in Quebec in 1947 was higher by 9.4 p.c. than in 1946 , rising from 167.5 in that year to 183.2 in the 12 months under review. The latter figure was computed from material furnished by 316 of the larger industrial concems in the city. There were month-to-month advances on nine occasions in 1947, and by Dec. 1, the level of employment in the major industrial divisions was higher by 17.8 p.c. than at Jan. 1.

Manufacturing in the year under review showed an increase of 9.1 p.c. from 1946, but the index continued much lower than durinf the years, 1941-45. The annual index stood at 184.9 , as compared with 169.4 . At the peak in 1943, the figure was 368.0. There was a decline in the leather division in 1947 as compared with 1946, but improvement was shom in the iron and steel products proup, and in other classes of manufacturing. On the whels, activity also increased in 1947 as compared with the preceding year in transportation, construction, hotels and restaurants and other services, and trade.

The salaries and wages reported by the co-operating establishments in suebec during 1947, exceeded by 21.6 p.c. the payrolls distributed by the same firms in 1946. The latest figure of payrolls, at 164.1 p.c. of the June 1, 1941, disburse. ments, was nevertheless considerably lower than in the period, 1942-45. On the other hand, the per capita figure rose from \$27.68 in 1946, to $\$ 30.77$ in the vear under review, as compred with $\$ 28.70, \$ 29.37, \$ 26.58$ and $\$ 23.41$ in 1945, 1944, 1943 and 1942, respectively.

## 3. TCRONTO

The improvement indicated in industrial employment in Toronto in 1947 brought the annual index to a level higher than in any other year, with the exception of 1944 and 1943. At 190.5, the latest figure (1926-100) was 7.4 p.c. above the averape in 1946, when the situation had beon seriously affected by industrial disputes as well in by curtailment in wartime production and other factors of the post-war period. We accompanying rise in the weekly salaries and wages reported by 2,566 loading omployess in the major industries amounted to $20.8 \mathrm{p} . \mathrm{c}$. The index number of payrolls in 1947 yas the highest in the record, standing at 170.6 p.c. of the June 1 , 1941, figure as 100. Previously, the maximum was that of 156.0 indicated in 1944. employees
The average weekly earnings of the salaried/and wage-earners employed by the larger establishments in Toronto in 1947 were $\$ 36.76$, as compared with $\$ 32.80$ in 1946, \$32.41 in $1945, \$ 32.51$ in $1944, \$ 31,62$ in 1943 , and $\$ 29.54$ in 1942 . The annual figure of per capita earnings in the year under review showed a gain of 38.8 p.c. from June 1, 1941 , when the monthly record of payrolis was instituted.

Chart No

As in preceding years for which data are available, the average earnings of persons on the pay lists of the larger employers in Toronto in 1947 were rather higher than the Dominion per capita figure. This fact is especially worthy of note since the proportion of women in recorded employment in the city is above the general average. In 1947, such workers made up 317 per 1,000 employees reported by the co-operating establishments, as compared with the Dominion proportion of 213 per 1,000 workers indicated in the same period.

During 1947, the average hourly earnings of hourly-rated wage-earners employed in leading manufacturing plants averaged 83.9 cents, the monthly figure rising from 79 cents at Jan. 1, to 89.9 at Dec. 1. The annual average in both 1945 and 1946 was 72.5 cents.

Industrially, there were wide-distributed increases in employment in Toronto in 1947 over 1946. In manufacturing, the index of employment rose by 5.7 p.c. to 192.2 in the year under review. This figure, however was considerably lower than in any preceding year since 1941. Food, printing and publishing, paper product, textile, iron and steel, electrical apparatus, chemical, and other branches of manufacturing reported accelerated activity as compared with 12 months earlier. The trend in the non-manufacturing industries was generally upward, there being increases in employment from 1946 in communications, transportation, construction and maintenance, trade and in hotels and restaurants and laundries and dry-cleaning plants. The advances in the index numbers ranged from 8.1 p.c. in trade to 27.8 poce in construction. In many cases, new all-time high figures were established during the yoar under review.

## 4. OTTANA.

Business activity in Ottawa was rather grater than in preceding years, according to information furnished by 305 of the larger firms in the major industrial divisions. Their employees in 1947 exceeded by 4.4 p.c. the number reported in the preceding year. The salaries and wages which chey disbursed rose by 16.5 p.c. The latest annual index of employment was 181.4 , as compared with 173.7 in 1946 and 162.6 in 1945. The trend from month to month was downerd during the first quarter of 1947, and again at May l, Sept. 1 and Oct. 1. These declines, like the advances indicated in the remaining months, were moderate. At Dec. 1 the index number was only slightly higher than at Jan. 1 .

The average earnings per person on the pay lists of the larger industrialists stood at $\$ 31.69$, as compared with annual figures of $\$ 28.45$ in $1946, \$ 28.30$. in 1945, $\$ 27.70$ in 1944, $\$ 26.65$ in 1943, and $\$ 25.29$ in 1942. The average in Ottawa in recent years has been lower than in other centres with populations exceeding 100,000 , with the exception of Quebec, where the industrial distribution of the workers, as in Ottawa, is a factor contributing to this situation.

Employment in manufacturing in the year under review showed/small advance, the index rising by 1.8 p.c. from 1946. Lumber and pulp and paper mills provided work for rather larger numbers of employees, while the iron and steel division showed little change on the whole. Among the non-manuracturing groups, construction and trade showed improvement, the index numbers rising by 12.9 p.c. and 2.3 p.c., respectively. The hotel-and-restaurant and laundry-and dry-cleaning industries reported litt le general change.

The index numbers quoted above do not include statistics for persons amployment in the Dominion Civil Service, for whom data are collected by the Public Finance Statistics Branch of the Dominion Bureau of Statistics.

In September, 1947, the civil servants reported in Ottawe received weekly
earnings of $\$ 37.31$. A year earlier, the per capita weekly figure was $\$ 34.61$, and that in September, 1945, \$31.10. The most recent data are subject to revision. Following are the numbers of govermmental employees reported in Ottawa for September in 1947 and preceding years:-

| Year | Employees in September | Year |
| :---: | :---: | :---: |
| 1947 | 26,909 | 1942 |
| 1946 | 32,046 | 1941 |
| 1945 | 34,208 | 1940 |
| 1944 | 33,890 | 1939 |
| 1943 | 32,291 |  |

Employees in September

$$
\begin{aligned}
& 29,210 \\
& 22,293 \\
& 17,514 \\
& 11,934
\end{aligned}
$$

## 5. HAMILTON.

Employment in leading industrial establishments in Hamilton in 1947 was in substantially greater volume than in 1946, when the situation had been affected to an important extent by prolonged industrial disputes, as well as by cut-backs in production for the war, and slackness associated with reconversion operations. The latest index number of employment, at 184.1, was 11.6 p.c. abcve the figure for the preceding 12 months; lower than in 1943 and 1942, it was otharwise the highest in the record. With only two exceptions, the general movement from month to month in the year under review was favourable. At Dec. 1 , the index was $9.7 \mathrm{p} . \mathrm{c}$. above its level at Jan. 1, 1947, and 8.9 p.c. higher than at Dec. 1, 1946.

The weekly salaries and wages distributed by the 431 employers cooperating in the monthly surveys in the year under review exceeded their 1946 figure by $28.4 \mathrm{p} . \mathrm{c}_{\mathrm{o}}$, a proportion which was larger than that of $21.2 \mathrm{p} . \mathrm{c}$. shown in the same comparison in Canada as a whole. The latest index number of payrolls was 154.7, based on the June 1, 1941, disbursements of the reporting firms as 100 p.c. This was the maximum in the record of $6 \frac{1}{2}$ years. The previous peak figure was 136.1 in 1943.

The per capita eamings also reached a new all-time high, standing at $\$ 37.32$, as compared with $\$ 32.46$ in the preceding 12 months, $\$ 32.82$ in $1945, \$ 33.10^{\circ}$ in 1944, \$32.45 in 1943, and \$31.32 in 1942. The average hourly earnings reported by leading manufacturers in Hamilton on behalf of the wage-earners for whom they kept record of the hours worked were 87.1 cents in 194\%. During the year, the rate advanced from 83.1 cents at Jan. 1 to 93.6 cents at Dec . I. In 1946 , the average was 73.7 cents, and that in 1945, 73.4 cents.

Manufacturing in 1947 showed an increase of 12.3 p.c. over 1946 , and the annual index, at 182.7, was slightly above the 1945 fjgure, but was lower than in the period, 1942-1944. The trend in the year under review was upward from the preceding 12 months in the electrical apparatus and iron and steel divisions, in both of which labour-management disputes had been an important factor in 1946. T'here was a small decline in textiles, but the food and other branches of manufacturing showed improvement in the year. The annual index number in construction rose by 9.8 p.c. during 1947, when trade and other non-manufacturing classes were also brisker.

## 6. WINDSOR.

Industrial activity in Windsor was at a higher level in 1947 than in 1946 or 1945; in both these years, the situation had been seriously affected, directly and indirectly, by prolonged industrial disputes, either in the city or elsewhere. The 264 larger establishments from which statistics were received during the 12 months under review reported an 11.7 p.c. increase in their staffs. At 265.0 , the inder was lower than in the period, $1942-1944$, but was otherwise the highest in the record. The index number of weekly salaries and wages rose by 28.4 p.c. in the year, and also exceeded the 1945 figure, but was lower than in 1944 or 1943.

The annual per capita weekly earnings of the persons in recorded employment in Windsor in 1947 stood at $\$ 43.54$, as compared with $\$ 38.05$ in $1946, \$ 40.37$ in 1945, $\$ 42.68$ in 1944, $\$ 41.61$ in 1943, and $\$ 32.22$ in 1942.

In manufacturing, the weekly salaries and wages reported in Windsor averaged $\$ 45.19$, as compared with $\$ 38.99$ in 1946 and $\$ 41.87$ in 1945 . The average hourly earnings of the wage-earners for whom records of hours worked were available in 1947 stood at 106.7 cents, considerably higher than the average of 94.3 cents in 1946, and 92.4 cents in 1945. The hours worked per week, on the average, were higher in 1947, standing at 40 , as compared with 37.8 hours in 1946. In 1945, the mean was 42.5.

As in earlier years, the general average of weokly earnings in Windsor in 1947 was higher than in any other city, exceeding the Dominion average of $\$ 36.15$ by over 20 p.c. During the year, the next highest per capita figure was that of $\$ 37.32$ in Hamilton. As has previous ly been stated, the concentration of workers in the manufacture of durable goods largely accounts for the relatively high aarnings in these two cities. Another and associated factor in the case of Windsor is the employment of unusually high proportions of male workers.

Manufacturing in Windsor was brisker during 1947, there being an increase of 11.7 p.c. in the annual index number of employment. The gain in the iron and steel division amounted to 14.1 p.c. Other branches of manufacturing showed moderate improvement as compared with 1946. The trend was also favourable in construction, (in which a rise of 17.5 p.c. was recorded), and in other non-manufacturing divisions.

## 7. WINNIPFG.

The volume of employment indicated in Winntpeg in 1947 was rather greater than in any other year for which data are availablo. At 155.6 , the annual index exceeded the 1946 figure by 3.9 p.c. The index number of payrolls showed a gain of 13.5 p.c. in the year. The average weekly earnings rose by 9.2 p.c. These figures are based on information supplied by 702 of the larger establishments in the mafor industrial divisions.

The per capita weokly earnings of their employees in the year under review amounted to $\$ 33.19$, as compared with $\$ 30.40$ in $1946, \$ 29.38$ in $1945, \$ 28.73$ in 1944, $\$ 28.00$ in 1943 and $\$ 27.06$ in 1942. From the beginning of the monthly record of payrolls, the average weekly earnings in Winnipeg have risen by 31.7 p.c.

The lovel of omployment in manufacturing generally in Winnipeg, was slightly higher than in 1946, the index showing a rise of 1.3 p.c. in 1947. Largely as a result of the extended labour-management disputes during the latter year, there was a reduction of $18.2 \mathrm{p} . \mathrm{c}$. in employment in the animal food industries. Textile, iron and steel, printing and publishing and other factories, however, showed improvement over 1946. Expansion was also indicated in transportation, construction and maintenance, hotels and restaurants and laundries and drymcleaning plants, and in trade. The advance in construction amounted to nine p.c., and that in trade to 6.9 p.c.

## 8. VANCOIVISR.

The level of industrial activity in Vancouver in 1947 was a good deal higher than in 1946, returning practically to the 1945 position. The annual index stood at 221.6 , as compared with 196.3 in 1946 and 221.7 in 1945. Lower than in 1944 or 1943, the latest figure, with that in 1945, was higher than in any other year in the record.
－ 56 ．
From Jan．I to Aug．1，successive advances in employment were indicated， but the trend was unfavourable during the next three months．There was a considerable increase in employment at Dec．1，when the index was higher by 9.1 p．c．than at Jan．1，exceeding the Dec．1，1946，figure by 7．3 poc．

Although employment in manufacturing in Vancouver was more active than in 1946，it was generally quieter than in 1945 and preceding years since 1941．The monthly index numbers of employment averaged 251．5，exceeding the 1946 figure by 5.5 p．c．Partly as a result of industrial disputes，there was a further decline in iron and steel plants in the year under review．Lumber products showed an increase of 26.9 p．c．in the index number of employment，while improvement was indicated in other branches of manufacturing．Expansion was also shown in the non－manufacturing classes，as follows：－commications， 12.3 p．c．；transportation， 22.3 p．c．； construction and maintenance， 37.4 p．c．：services（consisting mainly of hotels and restaurants and laundries and drymcleaning establishments）， 16.4 p．c．，and trade， 12.2 poc．

During 1947，monthly returns were compiled from an average of 941 leading concerns in the major industrial divisions．The increase of 12.9 poc ．which they reported 25 compared with 1946 was accompanied by a rise of 23.3 p．c．in their aggregate weekly salaries and wages．In the 12 months，the index of payrolls rose by 23.3 p．c．，a proportion which was slightly greater than the general gain of 21.2 p．c．in the Dominion in the same comparison．

The annual per capita weekly earnings advanced to $\$ 36.32$ in 1947，the highest figure in the record．The averages in earlier years were as follows：－ 1946，\＄33．12；1945，$\$ 33.60 ; 1944, \$ 33.52 ; 1943, \$ 33.43$ ，and $1942, \$ 30.39$ 。

The average hourly earnings reported by the larger manufacturers in Vancouver on behalf of the wage－eamers for whom they kept record of hours worked during 1947，stood at 95.3 cents，as compared with 83.9 cents in 1946 and 84.7 cents in 1945，when overtime work had been a factor of greater weight．In the year under review，the average rate rose from 91.4 cents per hour at Jan． 1 ，to 101.9 cents at Dec． 1.

## Index Numbers of Employment in the Eight Largest Cities．

Statistics for the eight largest cities are given in $T_{a} b l e s ~ 2 a n d ~ 7, ~$ while Charts 20， 21 and 22，illustrate the fluctuations of employment in these centres during the last few years．The curves are based upon the figures given in Table 7 。

> Employment in the Cities of Medium Size.

Monthly statistics of employment and payrolls for the 12 centres having populations ranging from 35,000 to 100,000 have been segregated since 1944. The following notes deal briefly with the situation indicated in the year under review in these cities．In the following paragraphs，the index numbers quoted in all cases are based on the June 1，1941，figure as 100 p．c．

## 9．HALIFAX．

Further curtailment in industrial employment was indicated in Halifax in 1947，when the index number，computed from data furnished by 250 leading employers， was lower by 7.1 p．c．than in 1946．The weekly salaries and wages reported，however， showed an increase of 3.4 p．c．The average weekly earnings of persons in recorded employment in the major industrial groups stood at \＄32．23，as compared with \＄29．17 in 1946，and $\$ 30.42$ in 1945 。

There was a considerable recession in employment in manufacturing
in 1947，the annual index being lower by 16.4 poc．than in 1946，when ir on
and steel plants had been much more active. Vegetable fund factories, however, showed improvement in the vear under reviow. Transportation afforded less employment, but the trend in construction was favourable, there being an incrase of $10 \mathrm{p} . \mathrm{c}$ in the 1947 index. Little general change was shown in the other nom-manufacturine, industrios for which data are available.
10. - SAINT Join:

Employnent in the larger industrial establishments in Saint John was in rather preater volume in 194 , than in the preceding year, the general index number advancing by $5.5 \mathrm{p}=$. The accompanyint rise in the $s a l u r i e s$ and wates was $13,1 \mathrm{p}, \mathrm{c}$. There we ma moderate increases in the personnel reported in manalacturing, notably in the iron and steel group. Trade and other non-manu acturing classes also showed rather greater activity, according to material furnished by 172 representative firris in tho city. The weekly eamings of their employees averaped 83134 , a fipure $7.4 \mathrm{p}, \mathrm{c}$, above the 1946 per capita figure of $\$ 2 \rho 18$. In 1045 , the avorago was $\$ 2529$,
11. - Spararnoke

Improvement was noted in Shorbrooke in 1947, when the general index number of employment was higher by five p.c. . while that of apgregate weekly payrolls advanced by 18,2 p.c. from 1946. The situation had then been affected to a considerable extent by labour-manegement disputes, a factor of greatly lossened importance in the year under review During $194^{7}$, statements wero compiled from 100 of the larerer industrial establishments in Sherbrooke. The salaries and wages disbursed woekly by these firms averaged $\$ 29.96$ per employee, as compared with $\$ 26.69$ in 1946 , and 826.17 in 1945.

As was pointed out in preceding Annual Reviews of Employment, the ratio of womon workers in Sharbrooke is unusually hirh, lareely due to the presence of important textile plants in the city The proportion of women per 1,000 persons on the staffs of leading industrialists at 0ct. $1,194 \%$, was 343 , as compared with 375 per 1,000 at Oct. 1, 1946, 401 at Oct 1, 1945, and 403 at Oct 1, 1944

## 12.- THREP RIVERS

Industrial activity in Three Rivers in 194: was considerably freater then in 1946, according to statistics tabulated from $9^{7}$ representative firms- Their morking forces rose by 15.5 p.c. from the preceding year. The weekly salaries and wages they distributed increased by $307 \mathrm{p}, \mathrm{c}$., while the averace earninfs of the r omployees advanced by 13 p.o. in the vear. The latest per capita firure was $\$ 34.94$, as compared with $\$ 30.92$ in 1546 , and $\$ 252 \%$ in 1545 . Manufacturing operations showed oxpansion during the year under review, when considerable improvement was noted in pulp and paper, textile and iron and steel plants. The non-manufacturing classes also roported greater omoloyment in 184\%.
13. - KITCHEMSR - MATPRLOO

The volume of employment afforded by leadinp, establishments in the Kitchener - Waterloo area in 1947 was greater than in 1946 . Standing at 131.8 , the latest index number was 13.6 p.c. higher than in the preceding 12 months The increase in the index of payrolls amountod to 33.3 p.c. The weekly salaries and wafes of the persons in recorded employment averaged $\$ 35.25$, as compared with $\$ 30.02$ in 1546 , and $\$ 29.78$ in 1945.

The trend of employment in the yoar under review was generally upward in manufacturinp. There were considerable gains in the animal food, leather, lumber, rubber and textile divisions, while iron and ste日l plants showed a decline In some
of these classes, industrial disputes had seriously affected the situation in 1946. Improvement in the year was also indicated in construction, trade and other nonmanufacturing industries.

## 14. LONDON.

There was a further upward movement in industrial activity in London during 1947, when the annual index number of employment rose by 10.6 p.c. from 1946 , and the payroll figure, by 21.7 poc. The average weekly earnings of the salaried employees and wage-earners on the staffs of the 283 larger firms co-operating in the monthly surveys advanced by 10.7 p.c. The latest per capita figure was $\$ 33.36$, as compared with $\$ 30.60$ in the preceding year, and $\$ 29.74$ in 1945.

General but moderate improvement was noted on nine monthly occasions in 1947. in which the index number increased by 8.3 p.c. between Jan. 1 and Dec. 1. In manufacturing, the annual index in the year under review exceeded that in 1946 by 8.1 poc. Little change on the whole was indicated in iron and steel plants, but vegetable food, paper product, textile and other factories afforded more employment. Trade, construction and other non-manufacturing industries were also brisker.

The number of women per 1,000 employees on the staffs of leading establishnents in London was very slightly lower than in 1946, standing at 311 at Oct. 1, as compared with 315 per 1,000 a year earlier. In comparison with the $r$ atios of 358 indicated at Oct. 1, 1945, and $373^{\circ}$ at Oct. 1, 1944, there were considerable declines in the figures more recently reported.

## 15. FORT WILLIAM - PORT ARTHUR.

Although employment in Fort William and Port Arthur was more active in 1947 than in 1946 , it continued at a lower level than in 1945. The index advanced by 10.7 p.c. in the year. The accompanying increase in the weekly salaries and wages in 1947 was 24.4 p.c. Pulp and paper mills reported expanded employment, and there was a minor gain in the iron and steel division. Improvement was also shown in trade, but the index number in transportation was lower than in 1946.

The weekly earnings of the persons employed by the 130 co-operating establishments in these cities in 1947 averaged $\$ 39.09$. In 1946, the per capita figure was $\$ 35.01$, while the 1945 mean was $\$ 35.53$.
16. REGINA.

The trend of industrial employment in Regina in 1947 was upward, there being an increase of $7.3 \mathrm{p} . \mathrm{c}$. from 1946 in the annual index number, computed from material furnished by 173 of the larger employers. The index number of weekly salaries and wages advanced by $17.6 \mathrm{p} \cdot \mathrm{co}$, and the average earnings rase by $9.3 \mathrm{p} . \mathrm{c}$. Manufacturing as a whole showed rather lowered activity, resulting in part from industrial disputes in animal food processing; construction, trade, and other nonmanufacturing industries, however, afforded more employment than in 1946. The persons in recorded employment during 1947 received a weekly average of $\$ 32.00$ in salaries and wages, as compared with $\$ 29.27$ in 1946 , and $\$ 28.05$ in 1945 .

As previously indicated, the ratio of women per 1,000 employees reported in Regina is unusually large, exceeding that recorded in any other of the 20 cities for which monthly statistics are segregated. The high proportion is associated with the industrial distribution of the persons employed by the co-operating firms, there being a greater-than-average concentration of employment in merchandising establishments. Although the ratio of women continued decidediy above the general average, it nevertheless was lower in 1947 than in earlier years of the record. At Oct.

1. 1947, the proportion reported in Regina wes 377 per 1,000 workers of both sexes, as compared with 389 at Oct. 1, 1946, and 420 per 1,000 at Oct. 1, 1945.

## 17.- SASKATOON.

Further moderate improvement was indicated in industrial employment in Saskatoon in 1947. Manufacturing as a whole was rather more active, in spite of the losses resulting from labour-management disputes in the animal food processing division. Construction and trade also afforded more employment than in 1946. Computed from information supplied by 143 of the larger employers in the city, the index number of employment rose by $5.3 \mathrm{p} . \mathrm{c}$. in the year, while the index of weekly payrolls advanced by $17 . \epsilon \mathrm{p} . \mathrm{c}_{0}$, and the average weekly earnings by 12.1 p.c. The per capita figure stood at $\$ 32.25$ in 1947 , as compared with $\$ 28.76$ in 1946 , and $\$ 26.76$ in 1945.
18. - CALGARY.

Continued expansion in employment was reported in Calpary in 1547, when the index number showed a gain of 7.2 p.c. over 1946. The index number of payrolls mounted by 19.3 p.c. in the same comparison. Trade, construction and other non-manufacturinf, industries reported heightened activity in the year under review. The situation in manufacturing was affected during several months by disputes in the meat-packing industrv. The general index number of factory employment nevertheless showed a minor increase from 1946, there being improvement in the processing of other foods, in iron and steel, and other plants.

The salaries and wages disbursed by 296 leading industrial establishment in the city represented a weekly average of $\$ 34.48$ for the men and women whom they employed in 1947. In the preceding 12 months, the per capita figure was $\$ 32.06$, and that in $1945, \$ 31.5$ ?
19.- EDMONTON.

Industrial employment in Edmonton was at a rather higher level in 1947 than in 1946. The increase in the annual index, which amounted to 5.5 p.c., took place mainly in the non-manufacturing industries. Construction and trade afforded considerably more employment, and improvement was shown in other classes. Fartly as a result of the industrial disputes in meat packing plants, the index number of manufacturing showed a decline of $1 . S$ p.c. in 194\%, when iron and steel factories were also quieter.

The reported total of aggregate weokly salaries and wages mas higher by $14.8 \mathrm{p} . \mathrm{C}$. in 1947 than in the preceding year. The average earnings of the persons on the staffs of the 243 larfer employers co-operating in the monthly surveys stood at $\$ 32.57$, showing an increase of $8.5 \mathrm{p} . \mathrm{c}$. over the 1946 per capita figure of $\$ 30.38$. The 1945 average was $\$ 29.31$.

$$
20 \text { - VICTORIA. }
$$

Activity in Victoria showed a moderate advance in 1947. The index number was then higher by $4.3 \mathrm{p} . \mathrm{c}$. than in 1946 , while the index number of aggregate weekly payrolls rose by 17.3 p.c. in the vear. Statistics recelved from 205 leadinp. industrial establishments indicated expansion in the non-manufacturinc clnsses. notably in construction, transportation and trade, with a reduction of $1.6 \mathrm{p}, \mathrm{c}$. in the annual index of employment in manufacturing. The loss was largely due to lowered activity in iron and steel plants. An upward movement was in evidence in other divisions, notably in the lumber industries, in which prolonged strikes had seriously affected the situation in 1946.

TABLE VIII. - The Sex Distribution of the Forkers in Rooorded Boployment in the Provinces, the Ieading Industrial Cities, and the Major Industrial Oroups as at Oct. 1, 1942-1947.

[^1]The earnings of the persons in recorded employment in 1947 averaged $\$ 35.29$ per week, as compared with $\$ 31.38$ in 1946 , and $\$ 32.70$ in 1945.

## V.- SEX DISTRIBUTION OF TIE PTRSONS EMPLOYED BY LEADING FIRMS IN THE MAJOR INDUSTRIAL GROUPS.

In 1942 and 1943, information relating to the sex distribution of the persons in recorded employment was obtained annually as at Oct. l. In 1945 and 1944. the surveys were made semi-annually, at Apr. 1 and Oct. 1 , while since 1946, the statistics have been collected on a monthly basis.

The material available in regard to sex distribution of the employees in the leading industries has not yet covered a period long enought to permit the delination of seasonal trends in employment for men and women, which undoubtedly are responsible in greater or lesser degree for the month-to-month movements roported during 1947, as indicated in the following, table:-

Table IX.- Parcentage Changes in Employment for the Men and Women on the Payrolls of the Reporting Establishments in the neriod, Jan. I to Dec. . 1947, together with Monthly Ratios of Tomen Per 1,0no Persons in Recorded Enployment.

On the whole, employment for wom in the year under review rose by nearly $3 \frac{1}{2} \mathrm{p} . \mathrm{c}$. , while among men the gain from 1946 amounted to not quite ten p.c. The disparity in the rates of incresse is associated with the variation in the levels of employment in the different industries for which data are available, although this was not the only factor. It will be recelled that particularly marked expansion was indicated in the year under review in logging and construction, in both of which the staffs are very largely male. In most of the industrial groups covered in the monthly surveys, however, the ratio of women was rather lower than during 1946. As compared with the war years, declines in the proportions of women were indicated in practically all cases. Following are the proportions in the nine leading industries recorded at Oct. I in the period for which information is available: 1942, 235; 1943, 262; 1944, 271; 1945, 253; 1946, 232, and 1947, 220. Thus the latest general ratio was decidedly lower than in any other year of the record.

The geographical and industrial distributions of the men and women in recorded employment at Oct. 1, 1947, are summarized in Table VIII, which also shows the proportions indicated at the same date in earlier years of the record.

Excluding statistics of contral eleotric power otations.

In inamucecturing, inclusing olectric light and power, as shown in Sable VIII and Table IX, employment for women rose in 1947 by 2.7 p.c., as compared with an advance of $8.7 \mathrm{p} . \mathrm{c}$. among men. The ratio of females per 1,000 workers of zoth sexes employed by the co-operating firms, however, fell from 239 in 1946, to 228 in the year under review.

The following table shows the changes in the proportions of women salaried employees and wage-armers as reported to the Annual Census of Manufactures in the poriod, 1938 to 1943 , together with the ratios indicated in the monthly surveys of employment and payrolls at Oct. I in the years, 1942-1947.

Table XI showed the ratios of wanen roportod in numerous manufacturing Andustices in 1939, based on annual information collected by the Census of Manufactures, and at Oct. 1 in the period, 1942-47, as reported in the current surveys of employment and payrolls. The Census returns relate to all manufacturing establishments irrespective of the number of their employees, whereas the monthly surveys are limited to establishments ordinarily employing 15 persons and over. The variations i.: coverage, and the difference in the periods to which the statistics relate may have introduced some elements of incomparability in the data of the two series. It is nevertheless likely that sufficient comparability in the two series exists to aflect generally the trends of female employment in the important group of manuracturing industries in the last nine years.

In spite of the pronounced declines in the proportion of women reported Le: manatucturing since the end of the war, their ratios per 1,000 employees of both soxes show significant increases over the levels indicated in pre-war days, when the volume of employment was substaritially smaller.

1. BRATZSEICS OF PAYROLLS IN THE DOMINION.
2. Summary

Combendiag in the spriag of 1941, statistics of weekly salaries and wages have been collected monthly to complement the current record of employment as $\sqrt{\text { Exclusive of central electric power stations. }}$

# PROPORTION OF WOMEN IN RECORDED EMPLOYMENT IN THE NINE LEADING INDUSTRIES, IN THE ECONOMIC AREAS AND IN CANADA AT OCT, 1, 1942-47 

MARITIMES

QUEEEC

○ NTARIO

BRITISHCOLUMEIA

roported by establishments, normally eaploying 15 persons and over, avallable from 1300. The first datia on payrolls were obsined with the employment returns for Aprol, 1541; the material obtained in the first and second monthly enquiries was incomplete in the case of several important industries, so that the record is considered as commencing at June 1, 1941. Soon after the institution of the payroll statistics, it became evident that the figures would have to be expressed in the form of index numbers to permit comparisons over periods of some duration, and to provide a measurement of the movements of salaries and wages with those of employment. In order to carry the record back as far as possible, the payrolls reported at June 1, 1941, for services Fenderod in the woek preceding, were taken as the bese of this index number of payrolls, and the statistics originally furnished at that date have beon revised and extended for the purpose. For comparative purposes, the monthly index numbers of amployment, on their original base, $1926=100$, are currently converted to the base, Lune $1,1941=100$, and are published on this base, as well as the 1926 base. For all parposes except that of comparison with the payroll data, however, it is recommended that the index numbers of employment on the original base should be used.

The use of so short a basic period for the payroll statistics, and follariag sual brief experience with the data, is obviously unsatisfactory, despite the uncoasing care taken to ensure the maximum sccuracy possible under the circumstances. Then time pernits a more satisfactory common basic period will be bstablished for the index numiers of amployment and psyrails.
 corver of this Anmal heg!ew, the tabulated material on gamings shoms the amounts disbursed by representative employers ${ }^{2}$ on or about the first of the month, for services rendered in the week preceding. The annual qverages of the statistics of employment and payrolls reported monthly in 1947 are summarized for the provinces, the leading cities and the major industrial groups, in Table I on page 2. Table II on page 4 shows the industrial distribution of the employees and payrolls reported in the Dominion as a whole in the year under review, while both tables contain per capita figures and annual index numbers for several years. In Table XII are given monthly and annual index numbers of employment, payrolls and average weekly earnings, together with per capita figures, from 1944

The aggregate salaries and wages reported by 17,882 leading employers in the ight najor industrial divisions in 1947 averaged higher by 21.2 p.c. than in 1048, the indox number of payrolls rising from 142.4 in that year to 172.6 in the jeriod under review. Previously, the maximum in the record was the 1944 figure of 143.2. The generel trend of payrolls was almost uninterruptedly fevourable during 1047, there being only one minor recession, at May 1。 From the Jan. 1 low point the the Dec. 1 peak, the disbursements increased by 29.4 p.c., to 193.9 at the latter sate. The increases reflected numerous and extensive upward revisions in wage and sslary rates and higher commissions consequent upon better supplies of commodities, 25 well as a generally greater volume of employment; it will be recalled that the adrance in the year in the annual index number of employment amounted to $8.5 \mathrm{p} . \mathrm{c}$. in. regard to the comparison with 1946, it may also be pointed out that the situation wis then seriously affected for lengthy periods by industrisl disputes, which were a factar of deasems importance in the year under review.

During 1947, the per capita earmings of persons on the payrolls of the larger establishrients in the eight leading industries were $\$ 36.15$ per week, as eompared with $\$ 32.38$ in $1946, \$ 31.99$ in $1945, \$ 31.84$ in $1944, \$ 30.78$ in 1943 and $\$ 28.56$ in 1942. The index number of average weekly earnings in this group of industries atood at 143.2 p.c. of the June 1, 1941, average; the 1946 figure was 128.2 , and that tr 1945, 126.7.
IFProm Nov. 1, 1944, the Bureau has maintained a monthly record of man-hours and average hourly onmings of wage-eamers; these data are dealt with in a subsequent section.
2/For estimates of the total labour inonme in Canada see the monthly bulletin ontiklad "ligegs, Sazurtes end Supplomentary Labour Inoome in Canada".

In the case of the nine loading industries, there were increases of 3.4 p.c. and 20.9 p.c. in the index numbers of employment and payrolis, respectively, in 1947 over 1946, while the annual averape weekly earnings mounted by 11.4 p.c. in the same comparison. The latest per capita figure was $\$ 36.19$, as compared with $\$ 32.48$ in the proceding 12 months.

As has previously been pointed out, the current surveys of employment and payrolls relate to large proportions of the wace-earning population $1 /$ in Canada. The representation in the various industries is not uniform, being affected by the organization of given industries in large or small units of prodiction or operation. In all cases, however, the coverage in the indicated indistrios is relatively large. The payrolls reported do not include those whose oarnings normally are unusially high, (such as cortain professional classes, etc.), nor those in the lower-paid brackets, such as apricultural and domestic workers. Also excluded are those employed in small businesses, where earnings are frequently low, partly because the omployment in many cases is on part-time basis. As a result of the wartime and post-war conditions, it is possible that the current statistics of emplovment and payrolls have recently covered larger proportions of the total wage-earners than would have been the case had pre-war circumstances continued.

In the great proup of manufacturing industries, the annual index of payrolls advanced from 138.5 in 1946, the lowest annual figure in the record, to 166.9 in 1947, the gain amounting to $20.5 \mathrm{p} . \mathrm{c}$. The latter figure was slightly below the 1944 maximum of 167.3 , but was otherwise the highest in the period of $6 \frac{1}{2}$ years for which data were avallable. The index number of employment showed a falling-off of 11.4 p.c. from 1944, and was also lower than in 1945,1943 or 1942. Activity in the non-manufacturing, classes reached new all-time peaks in 194\%, when the index numbers of employment and payrolls exceeded any previously reported. In all classes, the paym ment of higher wage-rates was a factor of marked importance in the greater totals of salaries and wages disbursed by leading establishments, as well as in the higher per capita figures.

A brief review of the provicial statistics of payrolls in the vear under review shows general increases from 1946, ranging from 2,3 p.c. in Nova Scotia (where the situation in 1947 was seriously affected by strikes in the coal fields), and 14.5 p.c. in Manitoba, to 24.3 p.c. in Ontario and 27.3 poco in British Columbia; in the last two provinces, industrial disputes had occasioned important losses in 1946. In all provinces except Nova Scotia, the 194 ? annual averape index numbers of payrolls exceeded those indicated in any earlior yoar. The Nova Scotiar. figure was lower than in the period, 1945-1942.

The indicated salaries and wares naid by the larfer emplovers in the main industrial divisions in each of the 20 cities for which monthly statistics are segregated were hitcher in the year under review than in 1946. The advances varied from 3.4 p.c. in Ilalifax (where the index number of employment declined by 7.1 p.c.), and 13.1 p.c. in Saint John, to $30.7 \mathrm{p} . \mathrm{c}$. In Three Rivers and 33.3 p.c. in KitchenerWaterloo. Also without exception, the 1947 peneral figures of per capita weekly earnines in all the cities for which data are published wore h:rher than in any preceding vear.

## IT. - Annual Averafo leekly Earnincs Reporton by Leadinf, Employers in Canada in 194?-47, "th Semi Annual pimures in 134"

Table VIII shows for the last six rears, the annual per capita figures of weekly earmines of salarind employees and ware-eamers on the stafis of the larger emplovers in a cons cerable list of incustries, givine also monthly fimmes I) For a discussion of the monthly surveys coverage of the total wace-earners enumerated in the 1941 Census, see the 1944 Annual Review of Employment and Payrolls. See also the explanatory rintas on papes I and II.

as at June 1 and Dec. 1, 1947. The movements of average weekly salaries and wages in the eight leading industrial groups from the early summer of 1941 are depicted in Chart 26. Monthly figures since 1944 for the major groups of industries are contained in Table 9, which appears for the first time.

The trend of weekly earnings in 1947 continued upward, in sympathy with continued advances in the cost of living. The per capita figure in the eight leading industries was $\$ 36.15$, showing a gain of 11.5 p.c. from the 1946 figure of $\$ 32.38$, previously the record high. The general increase from June 1, 1941, when the monthly record was instituted, amounted to 43.2 p.c. In the nine major industries taken as a whole, there was a rise of 42 p.c. in that comparison. Since June 1, 1941, the cost-of-living index in 1947 had advanced by 22.6 p.c.

In all main industrial divisions, the average weekly earnings in 1947 exceeded those earlier reported. The increases over 1946 were as follows:- manufacturing, $12.5 \mathrm{p} . \mathrm{c} . ; \mathrm{logging}, 22 \mathrm{p} . \mathrm{c} . ; \mathrm{mining}, 9.7 \mathrm{p} . \mathrm{c}$, ; commuications, $5.1 \mathrm{p} . \mathrm{c}$. ; transportation, 10.2 p.c.; construction and maintenance, 10.6 p.c.; services (consisting mainly of hotels and restaurants and laundries and dry-cleaning establishments), 11.5 p.c.; trade, $10 \mathrm{p} . \mathrm{c}$. , and finance, $6.4 \mathrm{p} . \mathrm{c}$.

Without exception, the annual averages reported in the various industries shown in Tables 8 and 9 were decidedly higher than in 1946, also exceeding the per capita figures in earlier years of the record. The month-to-month movement was upward on many occasions in most groups during 1947, and by the end of the year, the figures therein were substantially above the annual averages for the 12 months under review.

The highest earnings reported in the industries listed in Table 8 were in steam railway operation, ( $\$ 49.79$ ), pulp and paper mills, ( $\$ 48.30$ ), and metallic ore mining, $(\$ 46,25)$. The average in automobile manufacturing was also high; the figures for that industry as shown in Table 8 include data for factories manufacturing parts and accessories, in which the earnings cenerally are rather less than those in the automobile plants. At the lower end of the scale of average earnings as reported by representative firms, come the sums paid employees of hotels and restaurants, hosiery and knitting mills, laundries and dry-cleaning establishments, boot and shoe, and garment and personal furnishing factories, in which the 1947 per capita figures ranged from $\$ 22.45$ in hotels and restaurants, to $\$ 27.39$ in clothing plants. In these industries, the proportions of women employees are high, while the hours worked are frequently below-average. In the case of the hotels and restaurants group, board and lodging are often provided the workers; no allowance is made in the current data for the value of such perquisites. This is also the case in the $\log g i n g$ industry, in which the collection of material on omployment and payrolls is unusually difficult, largely due to the methods of payment used in many camps; in these instances, the earnings are credited throughout the season to the account of the employees. They are then drawn against for current needs, but in many cases, final settlement is made only when the bushmen have completed their periods of service with the company. This practice is commonly reported in Eastern and Central Canada. The high rate of labour turnover is another factor complicating the preparation of satisfactory statistics for logging; such turnover obviously tends not onlv to lower the aggregate eamings reported, but also has an important effect upon the earmings of the individual.

There is considerable disparity in the earnings of loggers in the various parts of the country, partly due to differences in the type of operations carried on in the various areas. At Dec. 1, 1947, the indicated per capita figures ranged from $\$ 35.69$ in Quebec to $\$ 53.22$ in British Columbia, the average in Canada as a whole being \$39.20. As has been indicated, the nccumulation of wages for distribution at the end of the season is very frequently found in New Brunswick and Quebec, so that the monthly averages probably tend to under-estimate the earnings of bushmen.

## AVERAGE PER CAPITA WEEKLY EARNINGS EIGHT INDUSTRIES

5able Mal Por Capita Weokly Earaing of Porsons Employed in Leading Establiohmonte in Spooifled Induntries in Canada, Annual Avorages, 1939 and 1942-1947.

III. - The Levels of Earnings of Persons Employed by the Larger Establishments in 1939, and in 1942-47.

From the institution of the current record of payrolls and average eamings, there has been a demand for information to show the pre-war levels of oamings for comparison with the figures reported monthly by leading employers in the main industrial divisions. Table XIII taken from the bulletin ${ }^{\prime}$, "Average Weekly Salaries and Wages of Persons Employed in Manufacturing, Mining and Logging in 1939, and in 1942-47 contains preliminary figures for the Dominion, obtained in a continuing study which will eventually permit publication of statistics of wookly earnings on an annual basis for 1939, 1940 and 1941 for all the industries included in the monthly surveys of employment and payrolls. The movements in the average earnings in practically all of the industries for which statistics are given in Table XIII have been almost continuously upward since 1939. The advances result in part from the generally high levels of employment characterizing the situation during the war and since hostilities were terminated, partly from widely-distributed upward revisions in the wage and salary rates associated with rising living costs, and partly, in the case of manufacturing, from changes in the industrial distribution of employees. Betweon 1939 and 1947, there were increases varying from 34 p.c. to 49 p.c. in the annual average earnings reported in the eight of the 17 main divisions of manufacturing listed in Table XIII, while in the remaining groups, the gains ranged from $50 \mathrm{p} \cdot 0$. to $80 \mathrm{p} \cdot 0$.

In logging, the average weokly earnings mounted from 1939 to 1947 by 104.5 p.c. The increases resulted from heightened activity in bush work, growing mechanization of the industry, and important advances in the prevailing wage rates. Persons employed by the larger mining companies received average earnings in the year under review which exceeded their 1939 per capita figures by 50 p.c. In this industry, the gain is mainly due to the payment of higher wage rates, the general lovel of employment in 1947 being somewhat lower than in 1939. In connection with these figures, it may be noted that since 1939, the cost-of-living index had risen in 1947 by 50 p.c. while the rates of income tax have increased and the incidence - of the tax is broader than in prewar days.
IV. - Average Woekly Salaries and Wages Reported by Leading Employers in the Provinces

In Table 10 are given monthly statistics of average weekly earnings of the persons on the pay lists of representative establishments in the provinces since 1943, with ennual average figures in the period, 1942-1947. The trend in all provinces was upward in 1947, when the increases in the per capita weekly salaries and waces as compared with 1946 varied from 5.8 p.c. in Nova Scotia and 7.7 p.c. in Prince Edward Island, to 10.9 p.c. in New Brunswick and Quebec, and 13.6 p.c. in Ontario. In the four westem provinces, the rates of increase were relatively similar, being 9.4 p.c. in Alberta, 9.6 p.c. in Manitoba, 9.7 p.c. in British Columbia and 9.8 p.c. in Saskatchewan. Although the changes in the year varied within rather narrow limits, the provincial index numbers of average weekly earnings, (measuring the changes since June 1941, when the payroll record commenced), showed more pronounced variations. Thus the 1947 figures, as contained in Table I on page 2, ranged from 136.6 in Manitoba and 136.8 in Prince Edward Island, to 149.0 in Nova Scotia and 162.8 in New Brunswick.

## V.- Average Weokly Salaries and Wages Reported by Employers in the Leading Cities.

The per capita figures of annual weokly salarios and wages in the larger cities in recent years are given in Tables 11 and 12 . In Table $I$ on page 2 appear summary statistics for the larger municipalities, together with index numbers of employment, payrolls and average wookly earmings.

[^2]Table XIV - Monthly Statiatios of Average Houra Worked por Took, and Averago Bourly and Woekly Rarninge of Hourly-Rated Wage-Earnors in Ksufeoturing ${ }^{1 / 2 n}$ Cmadn in 1945, 1946 and 1947 .

* The mersges at those dates wer alsoted by lose of workiny time at the yoar-and holidky in the case of Jan. 1, and by the gaster Holiday in the oase of Apr. 1, 1945, and May 1, 1946.
1/ Ae reported by leading manufacturers, exotusive of contral electric power statione.

In the centres with populations exceeding 100,000, the incroases in average earnings in the leading industries in 1947 over 1946 were as follows:- Montreal, 9.1 p.c; quebec, 11.2 p.c.3 Toronto, 12.1 p.c.; Ottawa, 11.1 p.c.; Hamilton, 15 p.c.; Vindsor, 14.4 p.c.; Tinnipeg. 9.2 p.c., and Vancouver, 9.7 p.c. In the 12 cities with populations ranging from 35,000 to 100,000 , the advances varied from 7.1 p.c. In Saint John and 7.5 p.c. in Calgary, to 13 p. ©. in Throe Mivors and 17.4 p.c. in Kitchener-Waterloo. It will be recalled that the rise in the Dominion average in the 12 months amounted to 11.6 p.c.

As in earlier yoars, the general figure of average weekly eamings in Windsor in the vear under review exceeded that in other cities for which data are segrepated, due to the large proportion of workers employed in the relatively highly-paid automobile and accessory industries. The per capita earnings in Nindsor, however, have not show increases during the period for which monthly statistios are available which are commensurate with the rises reported in many other areas. Thus, the index number of week ly earnings in ifindsor, based on the June 1, 1941, average as 100, was 115.9 in 1947 , as compared with the Canada figure of 143.2 . A decline in working tine, partly at premium overtime rates, during the post-war period was an important factor in this disparity, which is also associated to some extent with postwar changes in the industrial distribution of the persons on the payrolls of leadinf, establishments in Windsor.

The avarape earnings indicated in Hamilton, Poronto, Fort William-Port Arthur and Vancouver also exceed the general fifure of earnings in the other cities, and in the Dominion as a whole. The indistrial distribution of the emplovees for whom current statistics are available is larely responsible for the hicher per capita figures in those contres, in which large proportions of workers are encaged in the heavy manufactured goods industries. On the other hand, the average earnings in diabec City, Sherbrooke, Ottawa and Saint John are generally loss than those recorded in other centres for which monthly returns are segregated, also mainly as a result of the industrial distributions, associated in some cases with the employment of above-average ratios of women workers.

## VI.- STATISTICS OF AVGRAGE FOUTRS OF WORK PER WEFK AND AVFRAGE HOURLY AND TEERLY BARNINGS.

1. Ceneral.

The collection of monthly statistics of man hours and hourly earnings in connection with the current surveys of employment and payrolls was instituted in the latter part of 1944. As is explained in the brief description of tho material which appears on page 82 of this report, data on average hours of work and average hourly earnines are currently obtained for wafe-eamers for whom the leading employers kaep an accurate record of hours worked, thus largely relating to persons paid by the hour. As a result of this restriction, the number of emplovees for whom statistics on man-hours, hourly earnings and weekly wages are available is smaller than the number for whom information on weekly earnines is obtained in the monthly roports on employment and payrolls; the latter include data for the salaried personnel and wage-earners paid at other than hourly rates, as woll as for the hourly rated wage-aarners. The wageenrners in manufactiring for whon statistics of hours worked and nverage hourly earnings were reported during, 104 ? constituted 75.5 poco of the total workers reported by the co-operating manufacturers ${ }^{1 / \text { in that year; in the heavy manufactured goods }}$ industries, such materini was available for 79.1 poce of tho total staffs included in the monthly surveys. In the light manufnctured goods industries, the proportion was 72.2 p.c.

1/ The latest report of the Annual Census of lianufactures, that for 1046 , shows a total af 877,150 wage-eamers employed in all manufacturing estriblishments. In the same year, the wage-earners employed by the factories furnishing monthiy returns on man-hours, hourly earnings and weekly wages constituted some 81 p.c. of the Census aggregate of wage-earners paid by the hour and employed on other terms.

I) Exclusive of electric light and power.

* The avarages at these dates were affected by loss of working time at the year-end holidays in the case of Jan. 1, and by the Baster holiciays in the case of Apr。1, 1945, and Kay 1. 1946 。

Man-houq data are available for smaller proportions of workers in most of the non-manufacturing industries than is the case in the factory group, since payment on an hourly basis is less frequently found in the former group. The material on manhours and hourly earnings in this section accordingly largely relates to the manufacturing, classes.

The industrial distribution of the wape-earners for whom data were available in 1947 is shown in the final column in Table 13, which pives statistics of average hours per week in 1945, 1946 and 1947, together with average hourly eamings and weekly waces in the same period. Table 15 recapitulates the monthly recorc tor all manufactures ${ }^{1}$ and for the heavy and the lipht manufactured goods industries from Nov. 1, 1944, to Dec. 1, 1947, with annual averages. Tables XIV, XV and XVI on page 74, summarizes the monthly statistics of average hourly and weekly earnings of hourly-rated wage-earners reported in leadinp manufacturing establishments in Canada as a whole, in the provinces and in certain cities in 1945, 1946 and 1947.

The hours worked in manufacturing averaged slightly lower in 1947 than in 1946, large ly due to a reduction in the standard hours of work in many plants, in accordance with newly-negotiated management-labour agreements. The more pronounced decrease in the latest fifure as compared with 1545 resulted in pert from that factor, but to a considerable extent was also due to lessened overtime work, and to chanpes in the industrial distribution of the wage-earners reported in manufacturing. In regard to the latter factor, attention is called th the figures given in Table IV, showing over a lenethy period the proportions of emplovees reported in the heavy and the light manufacturing industries. The hours worked in the former category usually exceed those worked in the non-durable manufactured goods division in which higher proportions of women are employed.

The trend in average hourly earnings in manufacturing as a whole has been steadily upward since Mar. 1, 1046, following the moderate declines that occurred in the early post-war months as a result of reduced overtime work, changes in the industrial distribution of the wage-earners and other factors of the early stages of the reconversion period. From the late winter of 1546 until Dec. 1, 1947, a period of 23 manths, the indiceted rete rose by $25.7 \mathrm{p} . \mathrm{c}$. , to the highest point recorded up to then. Betwoen inn, 1 and vec, 1 in the year under roview, the general increase amounted to 9.3 cents, or 12.2 p.c.

## 2. Average Hours of Work.

The weokly averages of hours worked in a lenpthy list of industries in 1945, 1946 and 1947 are shown in Table 13, with the avorage hourly and weekly enmines, and the reported numbers of wage-earners in 1947 Table 14 gives the weekly hours and hourly earnings reported by leading establishments at June 1 and Dec. I in the three vears.

The fipures in these tables reveal in the period of observation a very peneral tendency towards shorter working week. In the relatively few industries where the average working time in 1947 exceeded that indicated in the preceding yoar, special circumstances accounted for the increases. Among these may be mentioned labourmanagement disputes which had had a particularly marked affect upon the situation in 1946, calusing important losses in the working, time then reported. Strikes also affected the figures in certain industries in the year under reviaw, but, on the wholo, they were a factor of greatly lessened importance than in the preceding 12 months.

During 1947, the average hours indicated in pulp and paper, dairy products and the crude, rolled and forged division of the iron and steel proup exceeded the general figure. This was due ir. part to the employment of above-average proportions of male workers in those industries. On the othor hand, relatively low average hours were indicated in garment and personal furnishinps and fruit and vegetable preserving.

AVERAGE HOURLY EARNINGS (encents)

factories, where large proportions of women are emploved.
The provincial averages of hours and hourly earnings in the perioci, 1945-47, are summarized in Table XV, and are given by months since 1944 in Table 17. The slightly higher figures of hours worked reported in Nova Scotia and Ontario in 1547 were largely due to the fact that prolonged strikes in those provinces in 1946 had reduced the general averages then indicated.

Statistics for five of the largor industrial cities, in which data are available for considerable numbers of hourly-rated wage-earners in a representative list of manufacturing industries, are given in Table XVI for the three years of the record. In Hamilton, the average hours worked during 1947 coincided with the general mean for Ontario, but in Kontreal, Toronto, Finnipeg and Vancouver, the fipures were lower than those for the provinces to which those citios belone. Tn some extent, this latter situation results from the greater-than-averome proportion of wom workers found in the lending municipalities, associated also with variations in the provincial and city industrial distributions of the employees reported in manufacturing.

## 3. Average Hourly Earnings.

As already stated, there were winesmeend increases in the average hourly rates
in 1947, as shown in Tables XIV-XVI on page 74, and in Tables 13-15. In the Dominion as a whole, the ceneral advance in manufacturing as compared with 1946 was 10.3 cents, or $14.7 \mathrm{p} . \mathrm{c}$. In the heave manufactured goods division, the rise amounted to 10.8 cents, or $14.1 \mathrm{p.c}$, and that in the light manufacturing industries to 9.6 cents, or $15 \mathrm{p} . \mathrm{c}$. The following branches of manufacturing showed increases of 10 cents or more in the year under review:- meat products, rough and dressed lumber, flour and other milled products, pulp and paper, naper products, rubber, beverages, chemicals, glass, electrical apparatus, crude, rolled and forged products of the iron and steel group, machinery, agricultural implements, land vehicles, automobiles and parts, foundries and machine shop products, sheet metal, non-ferrous metal smelting and refining, and other non-ferrous metal products. In the non-manufacturing classes, advances of similar magnitude were reporten in the mining of metallic ores, coal and other nonametallic mineral products, notably asbestos and in local transportation.

An examination of the industrial figures of average hourly earnings in Canada in 1946 and 1947 , as published in Table 13 , shows that the increases were concentrated to a marked degree within a range of nine percentage points, in the $10 \mathrm{p} . \mathrm{c}$, to $19 \mathrm{p} . \mathrm{c}$. class. Thus, in 29 industries or industrial groups, there were advances varying from $10 \mathrm{p}, \mathrm{c}$, to $15 \mathrm{p}, \mathrm{c}$. in 1 C 47 . In 21 classos, they exceeded 15 p.e., varying up to 19 p.c. In two classes, the rise over 1946 was greater than $20 \mathrm{p} . \mathrm{c}$. at the other end of the scale, were gains ranging from five p.c. to $10 \mathrm{p} \cdot \mathrm{c}$ in only three classes of manufacturing of the non-manufacturing divisions for which statistics are available, two showed increases of under 10 p.c. in 1947; in five, the advances varied from over 10 p.c. to $15 \mathrm{p} . \mathrm{c}$. , or just under, while in three they ranged from slightly more than 15 p.c. to not quite 17 p.c.

The hourly earnings of hourly-rated wage-eamors reported by leading manufacturers in the various provinces, as shown in Table XV, rose in 1947 over 1946 by 9.3 p.c. in Nova Scotia, 13.8 p,c. in New Brunswick, 12.9 p.c. in wuebec, 16.6 p.c. in Ontario, 12 p.c. in Manitoba, 15 p.c. in Saskatchewan, 10.2 p.c. in Alberta, and 14.5 p.c. in British Columbia. The advance in Canada as a whole was 14.7 p.c. Thus in most areas, the general percentage increases did not greatly differ from the Dominion rate of gain. The variations in the provincial figures largely result from the differences in the industrial distributions of the reported factory workers.

## 4. Average Weekly Wages.

- 81 -
hours is available since 1944 are given in Tables 13,16 and 19, for Canada as a whole, the provinces and for several of the leading industrial cities. In Table

XVII appoars a comparison of the movements of average weokly wages reported in manufacturing $1 /$, and those of the more general figures of average weekly salaries and wages. The latter figures depict the earnings of the salaried personnel, workers on commission, and ware-arners, whether paid at hourly rates or employed on other terms, while the weekly wages are those of wage-carners for whom leading factories keep record of hours worked, being mainly procuction workers. In the all-manufactures' catepory, the increase in the weekly wages of the hourly-rated wage-earners in 1947 as compared with 1946 amounted to $14.4 \mathrm{p}, \mathrm{c}$. , while that among the salaried employees and the wage-earners together was 12.6 p.c. The advances in the average weekly earnings in the heavy manufactured goods industries were stated as 14 p.c. in the case of the hourly-rated wage-earners, and $12.4 \mathrm{p} . \mathrm{c}$. in the case of the combined rigure for salaried employees and wage-camers. In the light manufactured poods industries, the earnings rose in the year by $14.3 \mathrm{p} . \mathrm{c}$. and $12.6 \mathrm{p} . \mathrm{c}$. in the case of the hourly-rated personnel, and the more general class of persons paid salaries and wages, respectively.

Table 16 and 19 , towards the end of this Annual Review, show the averago weekly wapes received by the wage-earners for whom leading manufacturers in the provinces and the larger industrial cities furnished monthly statistics of man-hours and hourly earnings from Nov. 1, 1944, to Dec. 1, 1947, together with annual averages in 1945. 1946 and 1947. In all cases, the 1947 figures show significant increases over those indicated in 1946 or 1945 . In Nova Scotia, the more recent average weekly earnings were rather lower than those reported in the two months of 1944 for which statistics are available, when war work had been a factor of very marked importance in that province. In all other areas, however, the 1947 averages greatly exceeded those in any earlier period in the comparatively brief record. In regard to the comparison of the later figures in Nova Scotia with the 1944 data, it may be pointed out that the averape hourly rate in manufacturing on a whole in that province has slightly risen since 1944, but the average hours worked have considerably doclined, with the result that the peneral fighre of average weekly earnings of hourly-rated wafe-earners in Table 16 showed a reduction of $\$ 1.17$ from Nov. 1, 1944 , to Nov. 1, 1947, and of $\$ 1.24$ from Doc. 1, 1944, to Dec. 1, 1947. The figures for the various industries making up the provincial total for manufacturing, however, showed significant increases in the yoar under review as compared with the two months in 1944 for which data are available.

## EXPLANATION OF THE MATRRIAL COLLECTED IN THE MONTHLY SURVEYS OF HOURS OF WORK AND HOURLY EARNINGS.

Wage-Earners. - Leading employers in the main industrial groups are asked to furnish monthly statistics on man-hours on behalf of those wage-eamers for whom they keep a "ecord of agpregate hours worked, so that the data largely relate to persons employod at hourly rates. Information for salaried employees is purposely excluded, while in many cases, statistics of man-hours are not available for certain classes of wage-earners, whose earnings, like those of most salaried employees, are not directly dependent upon the number of hours worked; examples of wage-eamers frequently excluded are route drivers, piece-workers in many but not all establishments, truck men, etc. In addition, some establishments do not keop a record of man-hours for any classes of employees. Accordingly the number of workers for whom statistics are obtained in the monthly enquiries into hours and eamings is smaller than the total number of employees, (salaried personnel and wage-earners) for whom statistics of employment and payrolls are furnished in the monthly enquiries into those subjects; the surveys on employment and payrolls also obtain data relating to the sex distribution of the workers in recorded employment, an important factor contributing to differences shown in the average earnings in various industries.

The monthly statistics of average hours and average hourly earnings, like those of employment and average weokly earnings relate, in the main, to establishments usually employing 15 persons and over, the smaller firms being excluded for reasons of economy in terms of cost and time. In the case of the manufacturing industries, (largely represented in the material on hours and earnings given in the present report, the statistics relate to over $75 \mathrm{p}, \mathrm{c}$ o of all salaried employees and wage-earners reported by the establishments co-oparating in the monthly survevs of employment and payrolls. The factories furnishing monthly data on man-hours and hourly earnings in 1946 employed over 81 p.c. of the total wage-earners reported by all manufacturing establishments in the same year. including wage-earners paid by the hour and those employed on other terms.

In mining and construction, data on hours and oarnings are currently available for some 85 p.c. and 83 poc. of the total emplovees reported to the monthly surveys of employment and payrolls in those industries, respectively; at June 1," 1941, the co-operating mine operators had employed over $96 \mathrm{p} . \mathrm{c}$. of all wage-earners at work as enumerated in the Census, while the employers in construction whose statistics were then received had reported over 79 p.c. of the Census total of employees at work in that group. It should be noted that the comparisons with the Census figures aro complicated by differences in the classifications ised in compiling the two series, so that the percentages of coverage are only approximate.

Man-Hours:- The statistios of man-hours include overtime as well as the hours worked by part-time and casual workers. Hours credited to persons absent on leave with pay in the recorded pay period are included in the statistics as though the hours for which payment was made had been worked.

Tages - The wages reported represent gross earnings before deductions are made for taxes. unemplovment insurance, etc.; they do not, however, include the value of board and lodging which in some cases is part of the romuneration of workers. Incentive and production bonuses and overtime paynents are included, as are sums paid employees absent on leave $\begin{gathered}\text { fith pay during the pay period for which statistics are given. The }\end{gathered}$ figures of average weekly wages result from the multiplication of the average hours worked during the period of observation, by the average hourly earnings reported in the same period.

Pay Periods.- Statistics of man-hours and hourly wages reported for periods exceeding one week in duration are reduced by the appropriate proportions to obtain for tabulation purposes the number of hours worked and the hourly earnings in one week in the indicated pay period; such information is then added to the data furnished by employers who pay on a weekly basis. so that, in all cases, the tabulated data represent the situation in one weak in each month.

TABLS 1.- IMDEX NUMBERS OF EMPLOMMNT BY ECONOMTC AREAS. (1928.100).

Sote: The relative woight shows the proportion of omployeos reported in the indicated provinoe or erea, to the total number of employees reported in Canada by the firms maing returns at Deo. 1. 1947.

[^0]:    1/See explanatory notes on pages I and II.
    2/The 1944 Annual Review of hmployment and Payrolls contained a comparison of the figures of employment reported by leading firms at June 1, 1941, with the total wape-eamers enumerated in the 1941 Census. It mav be noted that adjustment is currently made in the index numbers of employment and payrolls for the monthly surveys" constantly increasing coverage of industrial employment.
