

#### Abstract

ADVANCE STATEMENT OF HOURS OF PORK AND HOURLY AND WEEKLY EARNINGS OF MALE AND FEMALE WAGE-EARNERS AND SALARIED EMPLOYEES REPORTED BY LEADING MANUFACTURERS FOR THE LAST WEEK OF OCTOBER, 1948.

## 1. Summary.

The present report contains the preliminary results of the third annual survey of hours and earnings of male and female wage-earners and salaried employees in leading manufacturing establishments in the last week of October, 1948. The data are comparable with those published in the 1946 and 1947 reports, except that they relate to the latter part of October rather than of November, as in the two preceding enquiries. As a result, they include differing proportions of workers in certain seasonal industries; for example, sawmills, food processing and apparel manufacturing which, are more active in October than in Novenher. The questionnaire asked for information for all employees in manufacturing establishments usually employing 15 or more persons, with the exception of travelling salesmen, honeworkers, charwomen and workers engaged on new construction.

The gross weekly payroll figures from which the averages of hourly and weekly earnings of salaried employee and wage-earners were computed were made up of part-time, full-time and overtime earnings of the reported personnel, whether they were paid on an hourly, weekly, monthly, piecework or commission basis. Incentive, production, cost-of-living and other bonuses earned in the week were included, as were payments made to workers absent with pay during any part of the period covered by the survey.

In the eleven months elapsing between the 1947 and 1948 surveys, the average hourly and weekly wages of both men and women increased substantially. The average earnings of salaried workers showed a moderate increase. The proportions of women employed as wage-earners and as salaried personnel decreased to some extent in October, 1948. The average working time of wage-earners and salaried personnel fell insignificantly in the eleven months. The proportions of wage-earners working more then 48 hours in the week declined slightly, while the percentages working below 48 hours correspondingly increased.
2. - WAGE-EARNERS.

Wage-earners, defined as production workers, route drivers and delivery men, maintenance and related employees, comprise $83.3 \mathrm{p} . \mathrm{c}$. of all persons reported by the manufacturers cooperating in the survey for the week ending Oct. 31, 1948. Homeworkers, charwomen and workers engaped on new construction were excluded from the survey. The proportions of women reported as wage-earners in Canada in the surveys for 1946, 1947 and 1948 are shown in Table A.

As in other years, the lowest proportion of female wage-earners, 11.3 p.c.e was reported in British Columbia, where the heavy manufactured goods industries are

of major importance．The hichest proportion of women， $28 \mathrm{p} . \mathrm{co}$ ，was reported in Quebe，where large numbers are emploved in the textile ard apparel and other light industries．

TABLE $A_{0}$－PROPORT IONS OF WODEL WPORTBD AS MAGE－EARNERS I？MANUFACTURING．
Last Week Uf

| Division | Octioner， 1948 | Novembur， 1947 | November， 1946 |
| :---: | :---: | :---: | :---: |
|  | poc． | p 0 C 。 | poco |
| All Manufacturing | 22.4 | 22.7 | 23.7 |
| Durable Goods Ufg． | 7.9 | 8.8 | 9.5 |
| Non－İurable Goods Mfg． | 35.6 | 35.1 | 35.9 |

Hourly Barnings．－Substantial increases in average hourly earnings were general in the eleven months between the second and third surveys，\＆lthough they were not so great as those reported between November，1946，and November，1947．Table 3 shows the averafes of earnings in the three periods exanined，anci the percentage increase in 1948 as compared with 1947．The proportion of wonen＇s average hourly earnings to those of men apain increased slightly，standing at 63.6 poce in the last week in October，1948．In 1947，women＇s averape hourly aarnings ware 63.2 poc．of men＇s average hourly earnings，and in 1946，62．？p．c．The payment of increased ware rates on an＂across the board＂basis in many establishmerits durine the period for which data are availakia no doubli contributed to this situation，which was also influenced by the varying levels of activity in industries employing larger or smallar numbers of wonen．

The averape hourly earninfs variad widely amonf the provinces，the highost代pures being reported for both nen and women in Britich Columbia．Men＇s eurnirgs increasod in the eleven months by more than 10 oonts an hour in Alberta，British Columbia and Ontario，while women＇s oarnines increased by 7.3 cents an hour in Quebec and by 7.0 cents in Untarin and British Columbia．The greatest percentage increase for men in 1948 over $i 947$ was recorded in Alberta，and for women，in Quabec．Variations in the general levels of earnings in different provinces are closely related to the industrial distributions of their working forces，with consequent occupational，sex and ape differences，involving disparitios in pro－ portions of skilled，seni－skilled and unskilled workers．

Weokly Fiages．－Table 3 shows important increases in average weekly wages in all areas as compared with November，1947；the gains over 1946 amounted to 27.4 p．c．， 26.2 p．c．and 29.0 p．c．e for buth sexes，men and women，respectively．The advances in 1948，in the per capita weekly wages over the precoding year＇s levels were fenerally lower than those of 1947 over 1946，the exceptions being the figures for wage－earners of both sexes in Nova dicotia and Naw Brusswick，and for women in Quabec．Momen recelved 16.4 poc．of the gross amounts paid to the wage－aarnars reportad for the weok ending not．30，1948．Their average weokly wagee were $56.7 \mathrm{p} . \mathrm{c}$ ．of the average weekly wages paic men，as compared with 55.9 p．c．in 1547，and 55.4 poc．in 1946。

Hours of Work．－The average hours worked by wage－earners，acoording to the 1948 survey，variea insignificantly from those reported in 1946 and 1947. The percentage distributions of wage－earners in accordance with their working time were reasonably similar on the whole，in the three periods．The proportions of wage－earners working hetween 40 and 44 hours were higher in 1948 than in any earliar year．while the numbers and percentages working over 45 hours decroased slightiy．Tne comparative dawe are given in Table B。

Tabie 4. - Percentage Distribution of Wage-Earnare Repnrted by Leading Manufacturera in thu Lact Flook uf (hotober, 1948 , in Spooified Groups of Hours Horked in Canada und Provincer.

The number of wage-earners reported in the last woek of Octobor, 1948 are piven in Table l. See footnote on lable 1.

The averages are based on short-time, full-time and overtime hours actually worked, plus any hours of paid absence in the week to which the survey relates. Important causes of differences in working time include the employment of varying numbers of purt-time and casual workers, short-time or overtime work due to seasonal and other circumstances, variations in workinf tine on different jobs, absenteeism, and labour turn-over during the week under review, as well as variations in the standard number of hours in the working week in different areas and industries.

## 3.- SALARIED EMPLOYEES

Salaried employees, such as executive, managerial, office and factory clerical staffs, made up $16.7 \mathrm{p} . \mathrm{c}$. of the employees reported by leading manufacturers in the last week of October. 1948. In this group were included 14.8 p.c. of the men and $22.7 \mathrm{p} . \mathrm{c}$. of the women reported in the survey. Women made up 32.8 p.c. of the salaried personnel in $1948.33 .1 \mathrm{p.c}$. in 1947 , and 34.1 pec . in 1946. The proportions of women among the salaried workers reported in different provinces varied considerably, ranging from $27.6 \mathrm{p} . \mathrm{c}$. in Nova Scotia and British Columbia, to $36.6 \mathrm{p} . \mathrm{c}$. of the comparatively small number of salaried persons reported in Saskatchewan. Women comprised 28.9 p.o. of the salaried personnel in the durable goods manufacturing and $35.9 \mathrm{p} . \mathrm{c}$. in the non-durable goods category. These percentages were slightly below the proportions of 29.4 p.c. and 36.1 p.c. reported for heavy and lipht industries, respectively, in 1947.

The ratios of the salaried personnel to the total staffs vary considerably in different industries; to some extent, this is because of differenoes in the classification of certain groups of employees. More important causes of variations are related to the size and organization of the typical industrial units, with their varying requirements for comparatively highly-paid professional personnel, and the degree to which distributive functions are undertalegn by the administrative group. When separate sales offices are maintained. their employees are classified. in the distribution industry, and are not inoluded in this annual survey.

Weekly Salaries.- Modarate increases in average weekly salaries wore roported in all areas betwoen November, 1947, and October. 1948. In general, the advanoes were smaller both in amount and proportion than those reported for the wage-earners. In the preceding year, the increases in the earnings of the salaried staffs over 1946 had been greater than those recorded for the wage= oarnsrs, although the percentage gains were smaller. The average weekly pay of salaried men was highest in Ontario and British Columbia, but Alberta showed the
largest advances, abablutely, and in relation to the 1947 level. Sularied women in British Columbia were, on the average, most highiy paid; the increase of $\$ 3.33$ in their earnings in the elaven months was greater in amount and percentage than in any othar province. The averape salary paid women was 49.2 p.c. of the avarape paid men in October, 1948; in Novenber, 1947. the proportion wes $47.6 \mathrm{p} . \mathrm{c}$, and in 1946. 48.7 p.c. It should be noted that occupational and age differences contribute materially to the disparities in the salaries of men and women.

Hours of Work. - The averafe working time reported for the salariad staff in 1948 foll slightly from the 1947 level, and was 3.3 hours below the average reported for the wage-earners. Table C shows the feneral changes in averafe hours in the periods covered by the three annual surveys. In conparing hours for salaried and wage-enrner staffs, it must be rememberod that the time of sularied porsons is generally less carefully recorded than that of wafemearners, whose anninps are usually related more directly to the hours worked. The standard week of office workers tends to be shorter on the other luand, higher proportions of wage-earners are reported as casual workers, or as working short tine.

TABLE C. - AVEFAGH HOURS REPORTED FOR SALARIED PLRSONNEL AD BAGE-RAPNLFAS IN MANUFACTUR ING

| Salaried Employees |  |  |  | Wage-Farners |  |  |
