$\begin{array}{lllllll}0 & 10 & 20 & 30 & 40 & 50 & 60\end{array}$

WEFKLY EARNINGS AND HOURS OF WORK OF MALE AND FEMALF WAGE-EARNERS AND SALARIED EAPLOYEES IN LEADING MANUFACTURING ESTARLISHMENTS IN CANADA IN THE LAST WEEK IN NOVEMBER, 1947.

INTRODUCTION.
This report gives the final results of the second surwy made by the Dominion Bureau of Statistics in an annual series providing data on hours and aarnings of male and female wage-earners and salaried personnel in manufacturing establishments which usually employ 15 or more persons. The questionnaire, (reproduced opposits page 44), required a detailed analysis of the payroll records in the last week of November, 1947, for all employees on the paylists except traveling salesmen, homeworkers, watchmen, charwomen, and workers engaged on new construction. Firm members and proprietors were excluded from the survey.

Statistios of hours and earnings were reported separately for wage-earmers and salaried employees of each sex in 13 categories of hours, ranging from 30 hours or less to 65 hours or more. The number of overtime hours worked wes included with straight-time hours. The reported earnings represented the gross payments for services rendered during the week ending Noy. 30, 1947, before deductions were made for income tax, unemployment insurance, etc. They included overtime pay, production, incentive and cost-of-living bonuses, and commission payments (except those to travelling salesmen).

Since there were upward revisions in rates of pay in many industries during 1947, the levels of earnings reported in the survey are somewhat above the general average for the vear. As in 1946, the figures of salaries and wages for all employees agreed satisfactorily with the averages obtained from the monthly report of salaries and weges ast Dec. 1, 1947, relating to the praceding weok. The statistics of weekly wages, hourly earnings and hours of work of wage-aamers also differed only slightly from the averages derived from the monthly survey of the same date, relating to hourly-rated wage-earners in manufacturing. Table I summerizes the data for 1946 and 1947. A more detailed corrolation of the two series appears in Part IV of this report.

changes were a moderate gain in the number of employees $1 /$ and a large increase in the salaries and wages. Table III indicates the lavels of eamings in the two periods.

TABLE III. - SALARIES AND WAGES OF MALE AND FERALE EMPLOYEES OF LEADING MANUFACTURERS IN NOVEMBER, 1947, AS COMPARED WITH THOSE REPORTED IN NOVEMBER, 1946.

Salaried personnel again made up slightly over 16 p.c. of the total employees reported, and received $20,4 \mathrm{p} . \mathrm{c}$. of the gross payrolls, fractionally less than in 1946. Their average working time was slightly more than half an hour shorter than in the last week in Novembor, 1946, amounting to 40.4 hours for workers of both sexes, men averaged 41.2 hours, and women, 38,9 hours

Women comprised $24.4 \mathrm{p} . \mathrm{c}$ of the total emplovees reported, 33.1 puc. of the salaried personnel, and 22.7 p .c of the wage-earners, reflecting a decrease of one point in the proportion of female emploment in each group as compared with November, 1346. In November, $1947,21.9 \mathrm{p}, \mathrm{c}_{\mathrm{n}}$ of the women and $14.2 \mathrm{p}, \mathrm{c}_{0}$ of the men were reported as salaried workers. Although salaried women received $\$ 5.57$ a week more than women wage-earners, their earnings constituted a smallor proportion of men's salaries than women's wages constituted of men's wages. This was chiefly due to the influence of the comparatively high salaries of many executive and administrative emplovees, mostly male, on the average earnings of the salaried class.

Wage-earners were paid approximately 15 p.c. more for the woek ending Nov. 30,1947 , than they received a vear earlier. The increases in average wages of women were smaller in amount but greater in proportion to the November, 1946 , levels than those received by male wage-earners Manufacturers in the durable goods industries paid their male wage-aamers 34.8 cents an hours or 12.7 poco more, on the average, than in 1946, while female workers averaged 67.7 cents an hour, representing an increase of 22 p.c. over the 1946 figure. In the non-durable goods division. male wage-earners averaged 88.8 cents an hour, an increase of. 15.8 poco, while the 56.1 cents an hour paid women was 14.7 pocomore than they received in November, 1946. Upward adjustments in wage rates during the 12 months were chiefly responsible for the increases, but changes in the levels of industrial activity for seasonal and other reasons, decreases in the proportions of women workers, and other circumstances also had some influence on the averaces in November, 1947, as compared with those for 1/The monthly employment survey covering all employeos of loading manufacturers, i. $\theta$. those usually emploving 15 or more persons, showed an increase of 5.6 poc. in employment in manufacturing between Dec. 1,1946 , and Dec. $1,1947$.

November, 1946.
As mentioned above, there were no important changes in the general figures of average hours reported for wage-aarners; workers of both sexes averaged 43,7 hours, men, 44.9 hours, and women, 39.7 hours of work during the last week of November, 1947. Almost 13 p.c. of the men and 32.8 p.c. of the women were reported as working less than 40 hours; 64.5 p.c. of the men and 57.8 p.c. of the wromen worked 40 to 48 hours, while the remaining 22.7 p.c. of the men and 9.4 p.c. of the women worked longer than 48 hours in the week under review.

Salaried emplovees received, on the average, $\$ 5.93$, or 13.5 p.c., more for the week ending Nov. 30, 1947, than they were paid a year earlier. Nen's salaries, at $\$ 60.21$ for the week were 13.2 p.c. higher, and women's, at $\$ 28.68,10.7$ p.c. righer, than in November, 1946. Salaries rose in the non-durable goods divisions by 14 p.c. for both sexes, as compared with an increase of 12.7 p.c. in durable goods manufacturing. Higher earnings of varying amounts and proportions were reported in all provinces and in all important divisions of manufacturing. The variations resulted, in large part, from salary increases granted during the year.

## PART I.- STATISTICS FOR WAGE-EARNERS IN MANUFACTURING.

## 1. Distribution of Wage-Eamers.

Wage-eamers, defined as production, maintenance and related workers, as distinct from the office and administrative employees, constituted 83.9 p.co of all persons reported by leading manufacturers in the survey of the week ending Nov. 30 , 1947. Homeworkers, watchmen, charwomen and workers engaged on new construction were excluded from the survey. The proportion of male wage-eamers, at 77.3 p.c. of the total, was one point above the 1946 figure. Men comprised 91.2 p.c. of the wage-earners in the durable goods industries and 64.9 p.c. of those in the non-durable goods division. In a few industries, more women than men were reported as wage-earners; the most important of these were women's clothing, 79.8 p.c., men's clothing, 72.1 p.c., hosiery and knit goods, 66.2 p.c., tobacco, 65.0 p.c., chocolate and cocon products, $62.5 \mathrm{p} . \mathrm{c}$. , and drugs and medicines, $51.9 \mathrm{p} . \mathrm{c}$.

Summary Table IV shows the percentage distribution of wage-eamers by sex, and the proportions of the gross wages paid to men and women employed in leading manufacturing establishments in November, 1946 and 1947.

TABLE IV. - DISTRIBUTION OF WAGE-EARNERS AND WEEKLY WGGES OF MEN AND WOMEN REPORTED BY LEADING MANUFACTURERS IN THE LAST TEEK OF NOVEMBER, 1946 AND 1947.

|  | Wage-Earners |  |  |  | Gross Wages |  |  |  |

| Canada | 76.3 | 77.3 | 23.7 | 22.7 | 85.3 | 85.9 | 14.7 | 14.1 |
| Durable Goods Mrg. | 90.5 | 91.2 | 9.5 | 8.8 | 93.9 | 94.1 | 6.1 | 5.9 |
| Non-Durable Goods Mff. | 64.1 | 64.9 | 35.9 | 35.1 | 76.4 | 77.1 | 23.6 | 22.9 |
| Nova Scotia | 85.2 | 85.3 | 14.8 | 14.7 | 91.9 | 92.5 | 8.1 | 7.5 |
| New Brunswick | 81.7 | 80.2 | 18.3 | 19.8 | 89.8 | 88.7 | 10.2 | 11.3 |
| Quebec | 71.3 | 72.3 | 28.7 | 27.7 | 81.7 | 82.5 | 18.3 | 17.5 |
| Ontario | 77.0 | 77.9 | 23.0 | 22.1 | 85.8 | 86.2 | 14.2 | 13.8 |
| Manitoba | 77.9 | 78.3 | 22.1 | 21.7 | 86.0 | 86.2 | 14.0 | 13.8 |
| Saskatchewan | 88.0 | 87.2 | 12.0 | 12.8 | 91.8 | 91.2 | 8.2 | 8.8 |
| Alberta | 84.2 | 88.3 | 15.8 | 16.2 | 89.6 | 88.9 | 10.4 | 11.1 |
| British Columbia | 86.2 | 88,8 | 13.8 | 11.2 | 91.4 | 93.0 | $8 . \epsilon$ | 7.0 |

The sex distribution of wage-earners varies in accordance with the industrial activity in the different provinces. The highest proportion of men, 88.8 p.c., was indicated in British Columbia, where more than half of the reported wage-earners were engaged in the lumber and iron and steel industries, which emplov few wom wareearners. In Quebec, on the other hand, men made up only 72.3 p.c. of the wageearners; in this province, textile, tobacco and other industries employing many women are heavily represented.
2. Hours of Work.

The hours of work of wage-earners reported by leading manufacturers averaged 43.7 per emplovee in the week ending Nov. 30, 1947, the same as in the preceding year. This figure includes part-time, full time and overtime hours worked, plus any hours of paid absence during the week. As indicated in Table II on page 2, the average hours in the various industries and provinces remained fairly constant in the periods examined. In both vears numerous wage-earners worked longer or shorter hours than the standard week in their respective establishments. The employment of part-time and casual workers, absenteeism, short-time, overtime work due to seasonal and other factors, variations in working time on different jobs, and labour turnover during the week were important causes pf differences in working time. Variations in the length of the standard work week , which are related to the type of industrial activity and the geographical location of the plant, as well as the proportions of men and women emploved, also influence the general averages of hours.

Table $V$ on page 8 shows the distribution of workers in 1946 and 1947, in Canada and the provinces, in five categories of hours of work, giving also the average hours in each category. A high proportion of the women in all areas are reported as working less than 40 hours. This results from several factors, among which may be mentioned (1) a tendency for industries employing many women to operate on a relatively short standard week, (2) greater proportions of part-time and short-time work among women, and (3) a higher absenteeism rate among women than men. These circumstances also affect the average weekly wages of women as compared with those of men.

Table 1 on page 24 shows that in industries for which data are published the average hours varied for workers of both sexes from 35.7 hours in the women's clothing industry, to 48.7 hours in pulp and paper plants; among men, the range was from 38.1 hours in women's clothing manufacturing to 49.7 hours in sugar refining. Women's hours were lowest in the fish processing plants, where they worked an average of 34.5 hours and highest in the clay products industry, where the few women reported averaged 45.4 hours in the week surveyed. In the women's clothing and fish processing industries, respectively, 14.3 and $12.9 \mathrm{p}, \mathrm{co}$ of the male wagemarners averaged 30 hours or less. In all other groups the proportions of men in this class were relatively small. Among the industries emploving significant numbers of women, fish processing plants reported the highest proportion of women ( 41.3 p.c.) working 30 hours or less. Other industries indicating high ratio of women in the 30 -hours-andunder category were bread and bakery products, 24 p.c., chocolate and cocoa products, 24 p.c., and women's clothing, 22.8 p.c. Information on the distribution of wageearners by classes of hours worked in the important industries in Canada and the provinces will be found in Tables 7 and 8.

Provincial variations in average working time of wage-earners and in their distribution among the 13 categories of hours reported, result in part from differences in local practice and in provincial legislation respecting hours of work, and in part from the industrial distribution of the reported emplovees. The provincial averages of hours worked showed little change from November, 1946, to November, 1947. The variations amounted to less than an hour except that there was a decrease of 2.6 hours in the average working time of female wage-earners reported in New Brunswick. This decline mainly resulted from variations in the level of activity in the seasonal food I/For information on the Standard Work Week in Manufacturing Industries in October, 1947, see the Labour Gazette, Vol. XLIX, No. 6, June, 1949.

Table $V_{e}$ - Distribution of Wege-Earners in Cenade and the Provinces in Five Main Clasees of Bour Worked In the Lant Weok of Movember, 1946 and 1947, together with the Avernge Hours.

processing industries. The lowest averages of hours worked by both men and women were reported in the 1947 survey in British Columbia. Fims in Quebec indicated longer hours for men than in any other provinces, while those in Nova Scotia reported the highest average working time for wonen.

> 3. Average Hourly and Weekly Earnings.

The earnings reported for the wage-earners represent gross earnings for regular and overtime work, whether at time or piece rates, together with the amounts of any commissions, production, or cost-of-living bonuses, etc., paid to wage-earners for services rendered during the week ending Nov. 30, 1947. The reported earnings amounted to 85.1 cents an hour and $\$ 37,19$ a week for wage-earners of both sexes; for men, the averages were 92.1 cents an hour and $\$ 41.35$ a week, and for women, 58.2 cents an hour and $\$ 23.11$ a week. Both men and women were more highly paid in the durable goods division than in non-durable goods manufacturing. The marked variations in the levels of eamings in the different industries and areas resulted from many factors, including differing proportions of wage-earners of each sex, occupational variations, proportions of short-time, part-time and overtime work performed during the week, the numbers of casual workers reported, the extent to which establishments are located in areas where pay levels tend to be above or below average, etc.

Among the more important industries in Canada, for which data are given in Table l, the highest average hourlv earnings of both sexes torether was recorded in automobile manufacturing, in which wage-earners were paid 121.5 cents an hour, in second place were the petroleum products industries, in which the average houriy rate was 107.7 cents. Nien's hourly earmings were highest, on the average, in the automobile and women's clothing industries, where the hourly earnings were 121,9 cents and 116.5 cents an hour, respectively. In industries emploving signiricant numbers of women, the highest average hourly pay of 88.1 cents an hour was received by the small number of women employed in the automobilo industry; next to this, an average of 75 cents an hour was paid to women in the automobile parts manufacturing plants. The average weokly wages reported in automobile plants were higher than in other industries; men were paid $\$ 51.32$, women, $\$ 39.65$, and both sexes together, \$51。15 for the week covered by the survey. Figures of earnings in 1946 and 1947 for the important industrial divisions are included in Table II on page 2. Table VI gives the percentages that women's earnings formed of men's in the various provinces, as reported in the two surveys.
 CONSTITUTED OF THOSE PAID TO MEN IN THE LAST WEEK OF NOVEMBER; 1946 AND 1947.

| British Columbia | 62.6 | 63.3 | 59.1 | 60.1 |

The hourly and the weekly earnings of men and women varied from provinoe to province, largely as a result of differences in industrial distribution. The highest earnings for workers of both sexes were reported in British Columbia where pay lovels are abose-average partly because of the large numbers of emplovees reported in the highlyopaid lumber and iron and steel industries. In all inciustries and areas, women's hourly and weekly wages were lower than men's. Industrially, the proportions of their wages to those of men varied considerablv. Chiefly because of differences in industrial distribution within the province, the general provincial averages also differed to an important extent. Women wage-eamers in manufacturing in Canada as a whole received $63.2 \mathrm{p}, \mathrm{o}$, of the hourlv average paid to men, and 55.9 poc. of men's meekly average. The disparity in proportions is due to the shorter average working, week of women. The above-quoted percentapes were rather hifher than those obtained in the survey of Novamber, 1946, the general percentage increases in women's wages in the vear being greater than those of men.

Table VII shows the amounts and the percentages by which the hourly and weekly wages reported in 1947 exceeded those of 1946.

In practically all industries and areas, the hourly and weakly wages were higher in 1947 than in 1946, largely due to increases in wage rates, or, in some instances, to the payment of larger cost $-0 \rho^{\circ}=1 i v i n g$ bonuses. Variations in industrial activity for seasonal and other reasons, ir the proportions of women and of skilled workers, in amounts of part-time, short-time and overtime work, and in lenpth of the standard week of plant operation were among, the factors which also affected the average

earnings in the two periods. The comparatively small increase in women's eamings in Nova Scotia in 1947 resultod, in part, from a decrease in the number of women in wageearners reported in the iron and steel industry, where eamings are above-average; an increase in the number of part-time workers in food processing plants was also a factoro

The influence of variations in the average working time on the average weekly wages is indicated in Table VIII, which shows the average earnings of wage-earners according to their distribution in the 13 categories of hours. Wage-earners in the lower classes of hours were part-time and casual workers, those who were absent during part of the week surveyed as well as those whose regular hours of work were less-than-average. The wage-earners in the higher categories of hours include those in plants operating on unusually long standard weeks, those working overtime at regular or at premium rates, and workers such as stationary engineers and some maintenance staff, whose occupations necessitate a work week in excess of that worked by the majority of wage-earners in the establishment. In the shorter-hours categories, the weekly earnings were below-average. On the other hand, wage-earners working longer-than-average hours did not always receive proportionately higher earnings because, in some cases, industrial, occupational and other differences outweighed the effect of long hours and overtime work.

PART 2.- STATISTICS FOR THE SALARIED EMPLOYEES IN MANUFACTURING。

1. Distribution of Salaried Employees.

Salaried employoes were defined in the questionnaire as executive, managerial. supervisory, office, clerical and related staffs. Travelling salesmen were excluded from the survey, as were working proprietors and firm members. Since the distinction between salaried staff and wage-earners is not clear-cut, there were differences in the interpretation of these terms in different establishments, particularly in the classification of clerical staffs located in the plants. Professional workers, irrespective of whether they were associated directly with productive operations, were usually classified as salaried personnel; in printing and publishing, for example, the editorial and news staffs were commonly placed in this category.

TABLE IX. - PROPORTIONS OF WAGE-EARNERS AND SALARIED EMPLOYEES REPORTED BY LSADING MANUF'ACTURERS IN EIGHT PROVINCES IN THE LAST WEEK OF NOVEMBER, 1947.

| Area | Wage-Earners |  | Nomen | Salaried Employees |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Both Sexes | Men |  | Both Sexes | Men | Women |
|  | poc. | poc. | Poc。 | poc. | p.c. | poc. |
| CANADA | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 |
| Durable Goods Mfg. | 47.1 | 55.6 | 18.2 | 44.6 | 47.0 | 39.6 |
| Non-Durable Goods Mrg. | 52.9 | 44.4 | 81.8 | 55.4 | 53.0 | 60.4 |
| Nova Scotia | 2.6 | 2.8 | 1.7 | 1.7 | 1.8 | 1.5 |
| New Brunswick | 1.8 | 1.8 | 1.5 | 1.3 | 1.4 | 1.3 |
| Quebec | 32.9 | 30.8 | 40.1 | 31.2 | 31.7 | 30.2 |
| Ontario | 49.0 | 49.4 | 47.8 | 53.3 | 51.9 | 56.1 |
| Manitoba | 3.6 | 3.6 | 3.4 | 3.0 | 3.1 | 2.7 |
| Saskatchewan | 0.8 | 0.9 | 0.5 | 1.1 | 1.1 | 1.1 |
| Alberta | 1.9 | 2.0 | 1.3 | 2.0 | 2.1 | 1.8 |
| British Columbia | 7.4 | 8.5 | 3.7 | 6.3 | 6.8 | 5.3 |

In comparing the proportions of salaried workers and wage-arners in different industries, consideration must be given to the scale of operation and to the organization of the establishment. In most small firms, the proprietors or firm members (excluded from this survey) frequently undertake alone, or with clerical assistance, duties which in larger and more complex establishments require the services of considerable members of relatively highly-paid executive and assistants. Another
factor of importance is the organization of distributive functions. Where such work is performed by the administrative staffs of manufacturing establishments, the employees engaged thereon, exclusive of travelling salesmen, are included in this survey; if separate sales offices are maintained, their staffs are classified under the industrial hoading of trado and are not included in this report. Table IX on the preceding page, shows the distribution of salaried workers and wage-oarners in the different provinces indicating considerable variations in the ratios of salaried employees. It will be noted that only in Ontario is the proportion of salaried workers significantly higher than that of wageaeamers. This resulted partly from the industrial distributions of the reported employees and pertly from the existence of numercus head office staffs in that province.

Except in a few of the light manufactured goods industries emploving large numbers of female wage-oarners, the proportions of women among the salaried personnel were greater than among the wagemearners. Table $X$ shows that in Canada as a whole, women formed 33.1 poc. of the salaried staff, as compared with 22.7 p.c. of the wage-earners. In general, the industries which employ few female wage-earners tend to report a smaller-than-average proportion of women office workers. This contributes to the variations in proportions of salaried women indicated in the different provinces. Thus in British Columbia, where comparatively small proportions of the wage earnors are women, workers of that sex also comprise a smaller proportion of the salaried staff than in other provinces. The percentage distributions of salaried employees of each sex and of their earnings in November, 1946 and 1947 are shown in Table X.

TABLE Xo DISTRIBUTION OF MALE AND FEMALE SALARIED EMPLOYEES AND THEIR WEEKLY SALARIES, IN THE WEEKS ENDING NOV. 30,1946 AND 1947.

|  | Salaried Employees |  |  |  | Gross Salarios |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

|  | poc. | p.co | poc. | poco | poc. | poc. | poc. | p.c. |
| Canada | 65.9 | 66.9 | 34.1 | 33.1 | 79.0 | 80.8 | 20.1 | 19.1 |
| Durable Goods Mfg. | 69.3 | 70.6 | 30.7 | 29.4 | 82.2 | 83.5 | 17.8 | 16.5 |
| Non-Durable Goods Mfg. | 63.2 | 63.9 | 36.8 | 36.1 | 77.8 | 78.7 | 22.2 | 21.3 |
| Nova Scotia | 70.1. | 70.8 | 29.9 | 29.2 | 82.4 | 83.5 | 17.6 | 16.5 |
| New Brunswick | 69.0 | 68.8 | 31.0 | 31.2 | 82.5 | 82.7 | 17.5 | 17.3 |
| Quebec | 67.6 | 68.0 | 32.4 | 32.0 | 80.7 | 81.2 | 19.3 | 18.7 |
| Ontario | 63.6 | 65.2 | 36.4 | 34.8 | 78.5 | 80.1 | 21.5 | 19.9 |
| Manitoba | 70.1. | 70.1 | 29.9 | 29.2 | 82.8 | 83.1 | 17.2 | 16.9 |
| Saskatchewan | 65.5 | 65.6 | 33.5 | 34.4 | 79.1 | 78.8 | 20.9 | 21.2 |
| Alberta | 69.4 | 70.6 | 30.6 | 29.4 | 81.6 | 82.4 | 18.4 | 17.6 |
| British Columbia | 71.8 | 72.2 | 28.2 | 27.8 | 83.4 | 84.2 | 16.6 | 15.8 |

## 2. Hours of Work.

Data on working time are not so precise for salaried workers as for wageearners. Short absences and overtime work frequently do not affect the earnings of salaried personnel. Except in New Brunswick, where the average hours of salaried staff of both sexes increased slightly, the average working time showed minor decreases in all areas in the last woek of November, 1947, in comparison with the averages reported 12 months earlier. In all provinces and in most industries salaried persons worked shorter time, on the average, than wage-earners, and the hours of salaried women were less than those of salaried men. In the few industrial groups in which salaried personnel worked longer hours than wage-earners, the standard working week was less= than $\bullet$ everage, large numbers of part-time or casual workers were employed, labourturnover was high, or as a result of expanding or contracting employment, workers were employed in particular establishments for only part of the weok. Among the
industries affected to a varying extent by these factors may be mentioned fish producte, leather footwear, garments and personal furmishings and, for women, most divisions of food processing industries. Figures of average hours of salaried personnel in the provinces and the major industrial divisions for November, 1946 and 1947, are shown in the second part of Table II; more detailed data on an industrial and geographical basis for 1947 appear in Tables 2, 4 and 6 toward the back of this bulletin.

## 3. Average Weeklv Salaries.

The salaries reported in the annual survevs include the gross earnings of executive, managerial, and administrativepersonnel, and of the general office and clerical staffs. Earnings oi travelling salesmen, working propriotors and firm members are omitted, as well as the earnings of emplovees of sales offices where these are separately organized. Because men formed a large majority of the highlypaid executive, administrative and technical personnel, their averaçe salaries were greatly in excess of the earnings of salaried women and were also much higher than those of male wage-eamers.

The average weeklv salaries varied considerably from industry to industry, in November, 1947, ranging for workers of both sexes from $\$ 65.33$ to $\$ 38.32$; for men, the variation was between $\$ 75.67$ and $\$ 48.23$, and for women, between $\$ 33.96$ and $\$ 24.64$ for the week. Average salaries of men and of women varied significantly on a provincią basis. In each case, salaries were higher in the more highly industrialized Central provinces and British Columbia than in other areas.

The industrial and provincial variations in average salaries are related to the numbers of head-office staffs, the proportions of casual or part-time workers, of highly paid professional and managerial personnel, and of women workers, in addition to local variations in salary rates. Thus, in certain industries usually operating on a small scale, the functions of senior salaried employees are fulfilled by the proprietors excluded from the annual surveys, with the result that the reported average salaries are lower than where statistics for the higher paid officers aro included; the figures for Saskatchewan may be cited as an example of this situation.
table XI. - Increases in average weekly salaries in manufacturing in the week ending NOV. 30 , 1947, AS COMPARED NITH THOSE FOR THE WEEK BNDING NOV。30, 1946。

|  | Both Sexes |  |  | Men |  |  | Women |  |  |

|  | \$ | \% | poc. | \$ | \$ | poc. | \% | \$ | P.o. |
| CANADA | 49.78 | 5.93 | 13.5 | 60.21 | 7.00 | 13.2 | 28. 68 | 2.77 | 10.7 |
| Durable Goods Mrg. | 51.73 | 5.82 | 12.7 | 61.20 | 6.74 | 12.4 | 29.01 | 2.42 | 9.1 |
| Nan-Durable Goods Mifg. | 48.21 | 5.92 | 14.0 | 59.33 | 7.26 | 13.9 | 28.47 | 2.97 | 11.6 |
| Nove Scotia | 45.34 | 5.45 | 13.7 | 53.44 | 6.58 | 14.0 | 25.67 | 2.13 | 9.0 |
| New Brunswick | 44.59 | 4.26 | 10.6 | 53.56 | 5.31 | 11.0 | 24.78 | 2.10 | 9.3 |
| Quebec | 49.45 | 4.88 | 10.9 | 59.09 | 5.79 | 10.9 | 28.95 | 2.42 | 9.1 |
| Ontario | 50.36 | 6.54 | 14.9 | 62.01 | 7.82 | 14.4 | 28.84 | 2.97 | 11.5 |
| Manitoba | 46.07 | 4.61 | 11.1 | 54.62 | 5.69 | 11.6 | 26.07 | 2.31 | 9.7 |
| Saskatchewan | 41.95 | 3.17 | 8.2 | 50.47 | 4.37 | 9.5 | 25.90 | 1.70 | 7.0 |
| Alberta | 44.32 | 4.98 | 12.7 | 51.68 | 5.38 | 11.6 | 26.62 | 2.96 | 12.5 |
| British Columbia | 52.89 | 6.30 | 13.5 | 61.70 | 7.60 | 14.0 | 30.07 | 2.71 | 9.9 |

The salaries reported in Canada as a whole were substantially above those indicated for the last weok of November, 1946. The earnings of workers of both sexes rose by 13.5 p.co, those of men, by $13.2 p_{0} c_{0}$, and of women, by 10.7 poc. In general,
the increases in the vear were greater in amount but smaller in percentage than those recorded for wage-earners. In all areas, except Alberta, men's salaries rose, absolutely and proportionately, to a greater extent than women's salaries; in that province, the amount of the increase in the latter average was lower than the increase in the average salaries paid men, but the percentage gain was greater. Table XI on page 15 shows, in summary form, the amounts and proportions of the increases in salaries recorded in 1947 over those in 1946.

The sums received in salaries by women on the parrolls of the larger manufacturing establishments in the last week in November, 1947, were much less than the amounts paid to men; proportionately, the disparities were generally greater than in the last week in November of the preceding vear. The proportions that the earnings of salaried women formed of those of men in all provinces except Alberta were accordingly lower in 1947 than in 1946, as shown in Table XII。

TABLE XII.- PROPORTIONS THAT AVERAGE SALARIES PAID TO WOMEN EMPLOYED BY LEADING
MANUFAGTURGRS CONSTITUTED OF THOSE PAID TO MEN FOR THE LAST TEEK OF NOVEMBER, 1946 AND 1947.

|  | 1946 | 1947 |
| :---: | :---: | :---: |
|  | poc. | poc. |
| CANADA | 48.7 | 47.6 |
| Durable Goods Mrg. | 48.8 | 47.4 |
| Non-Durable Goods Mffg. | 49.0 | 48.0 |
| Nova Scotia | 50.2 | 48.0 |
| New Brunswick | 47.0 | 46.3 |
| Quebec | 49.8 | 49.0 |
| Ontario | 47.7 | 46.5 |
| Menítoba | 48.6 | 47.7 |
| Saskatchewan | 52.5 | 51.3 |
| Alberta | 51.1 | 51.5 |
| British Columbia | 50.6 | 48.7 |

Several factors in addition to pay differentials contribute to the variations shown in the salary levels of men and women. In addition to the occupational differences mentioned previously, women emplovees frequently belong to lower age groups, the rate of labour turnover is higher among women, and they are more frequently hired on a part-time basis.

PART 3.- STATISTICS FOR THE CITIES.
Statistics were segregated in 1947 for 22 cities viz: Montreal, Toronto, Hamilton, Winnipeg and Vanccuver; Halifax, Saint John, quebec, Sherbrooke, Three Rivers, Brantford, Fort William - Port Arthur, Kitchener - Waterloo, London, Ottawa, St. Catharines - Welland, Windsor, Regina, Saskatoon, Calgary, Edmonton and Victoria.

> TABLE XIII.- PROPORTIONS THAT EMPLOYEES AND PAYROLLS IN THE 22 LARGE INDUSTRIAL CENTRES FORNED OF THE TOTAL EMPLOYEES AND PAYROLLS REPORTED IN THE SURVEY OF NOVEMBER, 1947.

|  | Both Sexes | Men | Woren |
| :---: | :---: | :---: | :---: |
|  | Poc。 | p.c. | p.c. |
| All Employees | 64.2 | 62.3 | 70.3 |
| Total Payrolls | 65.0 | 63.6 | 71.3 |
| Wage-Earners | 62.9 | 61.1 | 69.2 |
| Total Wages | 63.5 | 62.1 | 69.9 |
| Salaried Emplovees | 71.0 | 69.5 | 74.0 |
| Total Salaries | 70.8 | 69.8 | 75.3 |

The proportions of the Dominion totals of employees and payrolls reported by manufacturing establishments in these 22 cities in the last week of November, 1947, are indicated in Table XIII。

## 1. STATISTICS FOR THE FIVE LARGEST CITIES.

Montreal, Hamilton, Toronto, Winnipeg and Vancouver together accounted for 45.2 p.c. of all employees reported by leading manufacturing establishments in the 1947 survey. The concentration of head office staffs in these centres was largely responsible for the fact that 53.4 poce of all salaried personnel as compared with 53.9 p. 2 . of the wage-earners were employed in the five cities. The proportion of women on the salaried staff was 33.1 poc., the same as in Canada as a whole, but women comprised $26.5 \mathrm{p} . \mathrm{co}$ of the wage-earners in these cities, as compared with 22.7 p.c. in the Dominion. This disparity was due to the location of numerous manufacturing establishments employing many female plant workers in the large cities, while many industries emploving high proportions of men operate in the smaller centres.

Differences in the industrial distribution of the reported emplovees and other local conditions are reflected in variations in wage and salary levels among the five cities. The highest average hourly earnings for both men and women were reported for Vancouver. The average weekly wages of both sexes together and of women were also higher in Vancouver than in the other cities; Hamilton reported the highest weekly pay for male wage-earners. The highest salary levels for both sexes together and for men were reported in Hamilton, while salaried women were most highly paid in Montreal. The wage and salary levels in the large cities were frequently higher than in the provinces in which the cities are located. These variations are relatgd to the industrial and sex distributions of the employees. Table II includes data on earnings for the five cities for 1946 and 1947, while Tables 6 and 9 show for wage-oarners and salaried employees, respectively, the averages of hours and earnings for the cities and for their most important industries.

> TABLE XIV. - DISTRIBUTION OF WAGE-EARNERS IN LEADING MANUFACTURING ESTABLISHMENTS IN CANADA AND THE FIVE LARGEST CITIES IN FIVE MAIN GROUPS OF HOURS WORKED IN THE LAST WEEK OF NOVEMBER, 1947.

| Place | Hours of Work |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | Under 40 | 40-44 | 45-48 | 49-54 | 55 and over |
|  | poc. | Poco | poc. | p.c. | poco |
| CANADA | 17.4 | 31.3 | 31.6 | 12.1 | 7.6 |
| Men | 12.8 | 29.8 | 34.7 | 13.5 | 9.2 |
| Women | 32.8 | 36.2 | 21.6 | 7.4 | 2.0 |
| Montreal | 21.0 | 30.6 | 27.4 | 12.2 | 8.8 |
| Mien | 13.5 | 27.7 | 31.5 | 15.3 | 12.0 |
| Women | 38.1 | 37.2 | 17.9 | 5.1 | 1.7 |
| Hamilton | 13.7 | 34.7 | 39.1 | 10.2 | 2.3 |
| Men | 9.2 | 32.9 | 43.7 | 11.5 | 2.7 |
| Women | 28.5 | 40.6 | 24.4 | 5.9 | 0.6 |
| Toronto | 23.2 | 37.6 | 28.0 | 8.3 | 2.9 |
| Men | 15.3 | 36.6 | 34.0 | 10.3 | 3.8 |
| Women | 42.9 | 39.9 | 13.1 | 3.6 | 0.5 |
| Wirnipeg | 14.9 | 42.7 | 28.3 | 10.3 | 3.8 |
| Men | 10.3 | 39.4 | 33.6 | 11.9 | 4.8 |
| Women | 29.2 | 53.1 | 11.8 | 5.4 | 0.5 |
| Vancouver | 24.7 | 64.4 | 7.7 | 2.1 | 1.1 |
| Men | 23.7 | 65.0 | $8 . ?$ | 2.3 | 0.8 |
| Women | 30.? | 62.8 | 5.0 | 0.9 | 1.1 |

In general, the average working time wes lower in the principal cities than in the provinces in which they mere located. The only exceptions were the slightly higher averages for employees of both sexes in Hamilton, and for wonen wapesearners in Vancolver. The average hours of both sexes together and of men were hifhest in Montreal and lowest in Vancouver, while women averaged longer hours in Hamilton and shorter hours in Toronto than in other of the five largest cities. These variations are related to differences in the duration of the standard work week in different areas and industries, to differences in amounts of overtime and shortatime work "in absentees sm , and in numbers of partmime workers employed in the last week of Noveraber 1947. Table XIV on the praceding part shows the proportions of wagenarner= in five beroad groups of houzo, zumalizel for comparative yurposes from Table 10.

Sameded amploveas in Winalpes wothed longer hourt, on the averase, than in the other four cities. In every instance the avarage hours of salaried personnel were slightly below or the same as the averages for the provinces in which the cities were located. Table 6 should be consulted for the figures of average hours of salaried personnel in the large cities and Table 10 for the distributions of the pageneamers in the 13 categories of hours reported.
2. STATISTICS FOR THE 17 SMALLER CITIES.

Industrial activity in some of the small cities centres about one or two important industries, while in others it is more diversified. Because of this, levels of earnings vary more widely among these centres than among the five large cities. For example, hourly and weekly wages are greatly above-average in Windsor and Fort William - Port Arthur where automobile and \&utomobile parts manufacturing in the former and pulp and paper and heavy iron and steel manufacturing in the latter utilize a high proportion of the workers. It will also be found that the wide-spread increases in average earnings in 1947 over the 1946 levels were not reflected in women's earnings in Halifax and Victoria. Among the circumstances responsible may be mentioned a reduction in numbers of women in the comparatively highly-paid iron and steel division in these cities; and seasonal variations in the food processing industries. The same factors operating in Canada as a whole and in the provinces and large cities, of differences in industrial activity, in nature and type of skills required, in proporm tions of women, in short-time; part-time and overtime work, seasonal variations, numbers of head office staffs, atc. also influenced wage and salary levels in the 17 smaller centres for which data are segregated. Average hours of work and average earnings of wage-earners and salaried employees in the cities are recorded in Tables 5 and 6; data for the most important industries in the different cities are included. The percentage distribution of the wage-earners in accordance with the number of hours worked will be found in Table 9 .

## PART 4 : COMPARISON OF THE STATISTICS RECEIVED FROM MANUFACTURERS IN THE MONTHLY SURVEY OF EMPLOYNENT PAYROLLS AND MAN HOURS AND IN THE ANMUAL SURVEY OF HOURS AND EARNINGS IN THE LAST WEEK IN NOVEMBER, 1947.

The monthly surveys of employment, payrolls and man hours provide information on the earnings of all employees of leading manufacturing establishments, and on the hourly and weokly earnings of wage-oarners for whom records of hours actually worked are maintained, Statistics showing separately the hours and earmings of men and women emploved as salaried staff and as wage-earners are available only on an annual basis. The material collected in the annual survey comes from the same group of manufacturers as the monthly data, but there are important differences in respect of industries, categories of workers, and type of information requested. In spite of the elements of incomparability in the two series, a reasonably high level of agreement between the comparable averages would have several important connotations. For instances, it would eventually make possible the projection of statistics of earmings for men and for women from data obtained in the monthly surveys of manuface turing establishments.

This section of the report deals with the differences found in the two records for 1947, explains their causes, and discusses the generally high degree of comparability again indicated in the provincial and industrial figures, as well as in those for manufacturing as a whole. Table XV contains averages from the two series for the provinces and the main branches of manufacturing in Canada.

Differences in Material Requested - There are marked differences in the questionnaires used in the annual enquiry and the monthly survey to serve the different purposes of the two series. The annual form, as reproduced on the last page of the report, requires an analysis of the payroll records for the men and the women emploved in a fixed week in the month, irrespective of the duration of their pay period. The monthly questionnaire asks for the entry of data for the last pay periods of the employees, whether the duration of their pay period be a week, a fortnight, half a month, or a month. The figures reported for pay periods exceeding a week are then reduced by the appropriate proportions to obtain for tabulation purposes the sums which, on the average, would be earned in one week of the pay period covered. Since the amount of casual labour and labour turnover in a period longer than a week will usually exceed that existing in a weok, the statistics computed from material for the lengthier pay periods will tend to show higher figures of employment, with consequently lower averages of hours of work and weekly wages. The averages of hourly earnings, however, will not be materially affected,

Differences in Industrial Coverage - Employees of central electric power plants are at present included in manufacturing in the published monthly reports on employment and payrolls, but are excluded from the anmual survey, and also from the monthly bulletins on man hours and hourly earmings. The monthly figures of employment and payrolls quoted in Table XV and elsewhere in this bulletin have been adjusted to exclude light and power employees

Another important group of employees at present included in manufacturing in the monthly surveys of employment and payrolls, but omitted from the annual enquiry, is a class of maintenance-of equipment and ancillary workers on steam railways, emploved elsewhere than in manufacturing shops, who are coded in transportation in the new Canadian Industrial Classification. There were also a few firms co-operating in the monthly surveys from which satisfactory data could not be obtained on the annual questionnaire.

Differences in Occupational Coverage. - The coverage of employment in individual establishments in many industries was somewhat lower on the annual survey because of the exclusion of homeworkers, charwomen, travelling salesmen and workers on new construction. The last two categories were more important, numerically, and in their effect upon the comparison of the statistics. The number of persons concerned, however, was relatively small, and the effect of their exclusion on the average earnings was less than that of the exclusion of the industrial categories mentioned in the preceding paragraph. The number of emplovees omit,ted from the annual survey for industrial, occupational or other reasons made up only $6.6 \mathrm{p}, \mathrm{c}$. of the total number of salaried employees and wage-earners reported in manufacturing, excluding central electric power stations, in the monthly survey of employment and payrolls for approximately the same pay period.

Differences in Allocation of Employees. - Still another factor contributing to disparities in certain of the averages obtained in the monthly and the annual surveys was a difference in the allocation of the data for salaried employees and wage-earners by some establishments. The classes most frequently involved were factory clerks, foremen, and maintenance workers. It may again be pointed out that the monthly reports on man-hours and hourly earnings relate only to the wage-earners of whose working time the leading emplovers keep record, whereas the hours and earnings of wage-earners in the annual survey relate to all emplovees classified by the firms in that category.

Table XV.- Comparison of the Statistics of Average Earnings and Average Hours Obtained in the Annual Enquiry into Hours and Earnings in the Last Week of November, 1947, with the Data Obtained in the Monthly Survey of Employment, Payrolls and Hours as at Dec. 1, 1947, Relating to the Last Week of November of that Year*.

## COMPARISON OF THE AVERAGES OBTAINED IN THE MONTHLY AND ANNUAL SURVEYS FOR THE LAST WEFK IN NOVEMBER, 1947.

## 1. Industrial Comparisons.

As in the preceding year, there was a high degree of comparability in 1947 in the statistics derived from the monthly and annual surveys, in spite of variations resulting from the material required, the coverage, and the distribution of workers in the monthly and annual reports. The differences in the general averages for manufacturing in the two series were as follows:

|  |  | 1946 | 1947 |
| :---: | :---: | :---: | :---: |
| Average Weekly Salaries and Wages | \$ | 0.18 | 0.08 |
| Average Weokly Wages | \$ | 0.20 | 0.05 |
| Average Hourly Earnings | ¢ | 0.4 | 0.5 |
| Average Hours of Wage-Earners | No. | 0.5 | 0.2 |

In 15 of the 18 main industrial groups in manufacturing for which data are given in Table XV, the figures of average weokly salaries and wages obtained in the two series varied by less than a dollar; in the remaining three industries, vizo, lumber, tobacco and non-metallic mineral industries, the difference in each case was less than ${ }^{W} .50$. The differences in the lumber groups ware largely accasionned by variations in the pay periods reported in the two survevs; the annual data result from an analysis of employment and earnings in one week, while those of the monthly survey relate to the situation existing in the various establishments in their last pay periods in the month. In the lumber industry, monthly or semi-monthly pay periods are commonly used; since the amount of labour turnover represented in lengthier pay periods is greater than in a period of one week, the statistics obtained are affected by this factor to a much greater extent than those of the annual enquiry. as a result the weekly figures for this industry are $\$ 1.46$, or 4.2 poc. higher in the annual surver than in the monthly. The higher figure of average salaries and wages in the tobacco and non-metallic mineral industries obtained in the monthly survey resulted chiefly from the inclusion of salesmen and their earnings therein, and the exclusion of figures for these classes from the annual data.

The figures of average weekly wages recorded in Table XV of the monthly and annual series also differed by less than a dollar in all but three industrial groups; these were the lumber, vegetable foods and miscellaneous manufactured product industries. The factors contributing to the indicated variations in these and other industries include differences between the hours and earnings of wage-earners for whom monthly data are available (mainly production workers, but frequently excluding piece-workers) and those of all wage-earners, including hourlv-rated wage-earners. piece-workers, routemen, ancillary workers and other categories, for many of whom no precise records of hours are ordinarily kept by the co-operating manufacturers. Differences in the allocation of certain categories of workers as salaried emplovees or as wage-earners in the monthly and annual survers also contributed to the disparities. The greatest cause of variation, however, was the use of the longer pay period in furnishing the monthly figures.

The average working time of the wage-earners reported in the two series varied by less than an hour except in the lumber, vegetable foods and pulp and paper industries. The variations in the lumber industry resulted largely from differences in the periods covered by the two survevs, as explained previously. The differences in the vegetable food processing industry were due, for the most part, to the exclusion of numerous pieceworkers, routemen and other categories of workers from the monthly report on man-hours and hourly earnings beoause the emplovers did not keep record of their hours of work. The disparities in the hours reported in the two enquiries in the pulp and paper industry resulted in part from certain differences
in coverafe of emplovees, but more particularly to the differences already mentioned in the pay periods to which the two survevs pertain.

An examination of the industrial figures of averace hourly earnings obtained in the two survers as giver in Table XV shows disparities exceeding one cent only in three cases; namely, in the animal food, miscellaneous non-metallic mineral products and miscellaneous manufactured products groups. These differences resulted, for the most part, from variations in the coverage of wage-earners. Thus, in the annual enquiry, data were available for the emplovees of certain fish canneries for whom monthly figures were not reported in 1947; this factor was largely responsible for a disparity of $\quad 10 S$ cents in the figures of average hourly earnings in the group as a whole, in spite of close agreement in the averages obtained in the two series for the meat products and other branches of the animal food processing group. Differences in coverape also resulted in the variations of 1.7 cents and 2.4 cents shown in the non-metallic mineral and the miscellaneous manufactured products industries, respectively, in November. 1947.

## Provincial Comparisons.

The average weakly salary-and-wage figuras obtained in the monthly and the annual reports showed comparatively little variation in anv provinces except British Columbia, where the differences in November, 1947, amounted to approximately four poc. in the average salary-and-wages figures, and to approximately five p.c. in the average weekly wages.

In that province, half-month lv pay periods are commonly reported on the monthly questionnaire, particularly in the important lumber industry. The higher degree of absonteeism, short-time and labour turnover in pay periods exceoding ome rraek tends to lower the computed averages of weekly earnings and of hours of work. The anmal report, on the other hand, requires an analvsis of the situation in one woen anc thus establishes a more exact relationship between the working timo and the wages in the week under review. Other factors contributing to the disparities are (1) the exclusion of certain classes of railway maintenance-of -equipment workers, (2) certain differences in the industrial classification of firms between the time of tabulation of the monthly and the annual figures. (The transfer of a number of fruit packing plants from manufacturing to trade, in accordance with the now Standard Industrial Classifaction, deserves special mention in connection with the ficures for British Columbia.) and (3) the inclusion of data in the annual report for a few firms whose returns were received too late for inclusion in the monthly report.

In New Brunswick, the difference of approximately three p.c. in the average weekly wages resulted in part from the exclusion from the annual survey of certain railway maintenance-of-өquipment emplovees and of workers engaged on new construction, who are included in the monthly tabulation. f factor of greater importance was the entry of data for piece-morkers and certain other wage-earners, particularly in food processing, in the annual survey, for whom records of hours are not maintained by their emplovers so that statistics for this group of workers are not included in the monthly tabulations of man-hours, hourly earnings and weekly wages.

The above comparisons show a generally satisfactory level of agreement in the ficures for the major industrial groups and the provinces obtained in the monthly and the annual surveys. In the main, the disparities result from factors which are inherent in the data requested in the questionnaires used in the two survers. It should be noted that casual labour, labour turnover and absenteeism have a continuing influence on fipures which are reported monthly for pay periods exceeding a week, and
consequently do not affect the ability of the monthly data ${ }^{1 /}$ to carry out their primary purpose, namely, to show current fluctuations in the levels of employment, payrolls, earnings and hours. It is improbable that disparities due to differences in the duration of the pay periods for which statistics are furnished in the two survevs will ever be entirely reconciled. It is also unlikely that the present coverage of piece-workers, route drivers and certain other categories of wageearners in the montrily statistics of manhours and hourly earnings can be expanded to any appreciable extent, in view of the fact that emplovers usually do not keep records of their hours of work.

## TARLES.

The tables on the following pages contain fairly detailod statistics of hours and earnings of men and women emploved as wage-eamers and salaried personnel in leading manufacturing establishments in the last week in November, 1947, for Canada, the provinces and the larger cities. Tables 1, 3 and 5 provide information on the average hours of work and the average hourly and weekly earnings of wage earners, while the companion Tables 2, 4 and 6, give the average hours of work and average weekly earnings of the salaried personnel. Tables 7, 8 and 10 show the percentage distribution of wage-earners in 13 classes of hours of work, in the more important branches of manufacturing in Canada, the provinces, and the five largest industrial centres. Table 9 gives the percentage distribution reported in manufacturing as a whole in the 22 leading oities.

Attention is also directed to Table II on page 2, in which will be found the averages of hours and earnings of wage-earners and salaried employees in the important divisions of manufacturing in Canada, in the provinces and in the 22 cities, as reported in the annual survevs for 1946 and 1947.

1/Attention is drawn to the comparison of the fiyures of average earnings obtained in the monthly enquiries into employment and payrolls with the data of the Annual Census of Manufactures, which appeared in the bulletin entitled "Average Weokly Salaries and Wages of Persons Employed in Manufacturing, Mining and Logging in 1939, and in 1942-47"。 Last Woek of Fovember, 1847, in the Indicated Industrien in CAMADA.

Simature.

CONFIDENTIAL:-The statistics you provide, which are required under the Statistics Act, 1948 will be held in strict confidence and will be issued only in the form of aggregates and averages.
The data which you furnish on this questionnalre will provide information essential to an understanding of the existing wage structure. You are therefore asked to make a detailed analysis of your time and payroll records. The form should be completed and returned within twenty-one days.

If you supply this Branch with two or more E.S. 1 monthly Employment Reports, the statistics furnished on this form should apply only to the branch indicated below the address on the other side. Reports are not required for non-manufacturing industries. Repair work is included with manufacturing.

## EMPLOYEES

Give data for all anlaried employec* and wage-eamers, charwomen, watch-
men, traveling sales. mea and workers on new construction.

Salaried Employeen.

Wage-earnera,

Data for part-time employess and faving or entering your emplo
during the week.

Employees absent in the week for which
you furnish data.

Give the dibtribution of employees accordworked in the leet

Entry of date in
clateses 4, 6. 8 and 11

Include overtime
hours worked.

## Data for plants

working seven days
a week.
Enter data for peraons
on leave with pay.
Enter dates of week
nolyued.

Enter gross earnings:
omiting odd cents.

Earnings of employee: paid weel

Earninge of employeea paid sermi-monthly as

Earnings of employees paid semi-monthly
ime or piece rates.

Eamings of employecs morthly rates.

Enter statistics separately for the male and the female salaried employees and wage-earners employed in the last week, or the last pay week, in October, in your manufacturing and related operations, with the exception of home-workers, charwomen, watchmen, workers on new construction, travelling salesmen, and working proprietors of unincorporated companies. Data for these classes should be excluded from this analysislof your payroll. Firm members should also be excluded. Give information for all other employees, whether paid by the hour, at piece-work rates, at fixed rates per week, per month, etc.

Salaried employees should comprise office, executive, clerical, managerial and supervisory staff, including supervisory staff in the plant, but excluding working foremen and overseers who perform work similar to that of employees under their direction. Wage-earners should include working foremen and other workers in the plant and those engaged in maintenance, warehousing, shipping, delivery (including drivers or route men), etc., excepting home-workers, charwomen, watchmen and workers engaged on new construction.

If you employed any casual or part-time help in the last week in October, enter statistics on their behalf opposite the categories of hours to which belong their periods of employment during the week. For persons leaving your employ during the last week, or the last pay week, in October, and for persons added to your staff during that week, enter data of hours and earnings opposite the categories of hours in which fall their periods of employment during the week.

If any of your employees were absent on leave with pay in the last week, or the last pay week, in October, statistics should be given on their behalf as if they had been at work in the period. Information should not be entered in any part of the form for persons absent without pay, throughout the week.

## HOURS

In Columns 1, 4, 7 and 10 of the form, enter statistics giving the number of male and female salaried employees and wage-earners, respectively, who worked the hours in the categories classified in Column A, and in Columns 2,5,8 and 11 enter the aggregates of the hours worked by such persons during the last week in October. Enter in each category, the total hours worked to the nearest hour, omitting fractions. Do not report all employees in any one class of hours unless every Individual actually worked the number of hours indicated in Column A for that class or, if absent, was paid for that number of hours.

Do not enter in Classes 4, 6, 8 and 11, data for employees who worked half an hour less, or more, than the hours specified. Thus an employee who worked $47 \frac{1}{3}$ hours should be reported in Class 7, one who worked $48 \frac{1}{2}$ hours, in Class 9.

The statistics for employees entered under different groups of hours, and the aggregates of hours worked by such persons, should include overtime hours worked, if any, as well as normal or standard hours. If you compute premium overtime payments in terms of hours (for example, credit $1 \frac{1}{4}$ hours time to persons working one hour overtime) enter the hours actually worked, not the hours credited. (The wages reported should, of course, include the overtime payment as well as payment for normal hours.)

If operations are continuous in your plant, or in certain of its departments, include the hours worked on Sunday by any employees working on that day, with the hours of work performed on week days.

If any of your employees were absent on leave with pay in the week for which you are reporting, enter in the appropriate spaces their numbers, the hours for which they were paid, and the amounts paid to them.

Enter immediately before the signature, the exact dates of the week for which your analysis of the hours of work is being made.

## SALARIES AND WAGES

In all cases, enter in Columns 3, 6, 9 and 12, statistics of gross earnings, before deductions are made for taxes, unemployment insurance and other social insurance contributions. Report the earnings to the nearest dollar, omitting odd cents.

For employees paid each week, report the gross amounts earned in the last pay week in the month; the period for which you report salaries and wages should coincide with that for which the hours and employees are reported. For employees paid fortnightly, the paylists must be analysed to ascertain the gross amounts paid for the hours worked by your various employees in the last week in October. For individuals who worked the same number of hours in both weeks of the fortnightly pay period, one-half of the fortnightly salaries or wages can be reported, with one-half of the total hours.

For salaried employees and wage-earners paid twice a month at fixed monthly rates so that they receive the same amount for the half-month regardless of the number of working days therein, the paylists must be analysed to ascertain the amounts paid for the hours worked in the last week in October For individuals who worked the standard number of hours throughout the pay period, report $6 / 13$ of the semi-monthly salaries or wages, with $6 / 13$ of the total hours; do not divide the semi-monthly pay by half.

For employees paid semi-monthly whose earnings vary with the number of working days in the halfmonth, the paylists must be analysed to find the amounts paid for services rendered in the last week in October. For individuals who worked the standard number of hours throughout the pay period (consisting of 13 days, exclusive of Sundays), report $6 / 13$ of the total semi-monthly earnings. In the case of persons employed in a plant or department where operations are continuous, so that a staff works on Sundays, report $7 / 16$ of the amounts earned by persons working the standard number of hours in the pay period (consisting of 16 days, including three Sundays).

For employees who are paid only once a month at fixed monthly rates, the paylist must be analysed to obtain the earnings for the time worked during the last week in the month; in the case of employees paid for attendance for the fuil month, $6 / 26$ (or $3 / 13$ ) of the monthly salaries and wages should be reported. For employees in a plant or department operating 7 days a week, $7 / 31$ of the monthly earnings should be reported for employees on duty, or paid, for the standard number of hours in the full month. Do not divide the monthly payroll by four to find the earnings for the week.

For employees paid once a month whose earnings vary with the number of working days in the month, enter the earnings for the time worked during the last week in the month. For those paid for the standard hours of work throughout the whole month, $3 / 13$ of the monthly pay should be reported. In the case of those working in a plant or department operating 7 days a week, $7 / 31$ of the monthly earnings should be reported. If Thanksgiving Day is observed as a holiday without pay, $6 / 25$ of the earnings should be reported, or $7 / 30$ in cases where operations are continuous.

Please address any questions regarding this report to the Employment Statistics Branch.

> STATISTISS EANADA L:3RARY HIBL

1010510555

[^0]:    1/From 1932 to 1945, the Census of Manufactures made annual surveys of the hours and earnings of male and female wage-earners emploved in all manufacturing establishments in one week in the month of highest employment in the different establishmentso The material in this bulletin relates to establishments usuelly employing 15 persons and over, depicting the situation existing in the last week in November. The employees for whom statistics are given in the present bulletin formed $87 \mathrm{p} . \mathrm{cos}_{\mathrm{o}}$ of the total workers reported by all manufacturers to the Annual Census of Manufactures in 1947.

[^1]:    *For later monthly figures of average salaries and wages, average weokly wages and average hourly earninge, see the monthly bulleting on employment and payrolls, and manhours and average hourly earnings. (Reports 9-4010 and 94040).
