EARNINGS AND HOURS OF WORK IN MANUFACTURING

1967

Earnings and Hours of Male and Female Wage-Earners and Salaried Employees
in Large Establishments in the Last Week of October 1967

Published by Authority of
The Minister of Industry, Trade and Commerce

August 1969
8003-508

Price: 75 cents

EMPLOYMENT AND PAYROLL REPORTS

Following are publications of the Labour Division based upon establishment data in the field of industrial employment, payrolls and hours:

71-001 - Advance Statement on Employment and Average Weekly Wages and Salaries - Monthly - Price \$1.00 per year

(Index numbers of employment and averages of weekly wage and salary statistics for Canada (major industry divisions) and the provinces (industrial composite figures)).

71-002 - Employment and Average Weekly and Salaries - Monthly - Price \$1.00 per year

(Industry and area index numbers of employment and payrolls and averages of weekly wage and salary statistics; comparisons with earlier periods; charts and explanatory material).

71-003 - Man-Hours and Hourly Earnings - Monthly - Price 45 cents per year

(Industry and area averages of hours per week, hourly and weekly wages, with comparisons from a month and a year earlier, and certain historical comparisons; charts and explanatory material).

71-005 - Estimates of Labour Income - Monthly - Price 35 cents per year

(Monthly estimates of wages, salaries and supplementary labour income, both unadjusted and seasonally adjusted, for specific industries and regions; with annual totals from 1954).

71-008 - Estimates of Employees by Province and Industry - Monthly - Price 35 cents per year

(Estimates of total numbers of employees, with comparisons with a month and a year earlier).

71-401 - Review of Employment and Average Weekly Wages and Salaries - Annual - Price \$2.00

(Industry and area index numbers of employment and payrolls and average weekly wages and salaries, monthly and annually, over a lengthy period; charts and explanatory material).

71-402 - Review of Man-Hours and Hourly Earnings - Annual - Price \$2.00

(Industry and area averages of hours per week, hourly and weekly wages, monthly and annually, over a lengthy period; charts and explanatory material).

71-504 - Earnings and Hours of Work in Manufacturing - Annual - Final Report - Price 75 cents

(Separate figures of earnings and hours for men and women and for salaried employees and wage-earners in one week in October from 1946 with industrial and area detail; charts and explanatory material. Special data are obtained on a rotational basis in successive years).

71-507 - Labour Income, 1926-58 - Price 75 cents

(A complete record of annual estimates of labour income from 1926, along with monthly figures from 1947; contains explanations of sources, methods and concepts).

71-509 - Estimates of Employees by Province and Industry, 1961-64 - Price 50 cents

(Estimates of total numbers of employees, monthly and annually, for major industrial divisions, Canada and provinces; contains a review of concepts, sources and methods and indicators of sampling variability).

71-504 - Employment Indexes, Average Weekly Wages and Salaries, Average Weekly Hours and Average Hourly Earnings, Monthly and Annual Statistics -- Historical Series, January 1961 - May 1965 -- Volume I - Price \$4.50

(This volume gives statistics revised to the 1960 Standard Industrial Classification and a 1961 time base for index numbers).

Remittances should be in the form of cheque or money order,
made payable to the Receiver General of Canada and forwarded to
the Publications Distribution, Dominion Bureau of Statistics,
Ottawa, or to the Queen's Printer, Hull, P.Q.

COMMENTARY

Earnings and Hours of Work in Manufacturing, Last Week in October, 1967.

Average weekly earnings of all male employees reported in manufacturing in the last week of October 1967 were \$123.32. This represented an increase of 6.1 p.c. over the figure for October 1966, and was 19.4 p.c. higher than in 1964, the earliest year for which comparable data (based on the 1960 Standard Industrial Classification) are available. Part of the increase over the year in average weekly earnings resulted from a change in the proportion of wage-earners to total employees. Employment was lower in the survey week in October 1967 as compared to October 1966 with the decrease occurring in wage-earners, whose earnings are lower than salaried employees. The average for all female employees was \$67.26 in October 1967, an increase of 6.8 p.c. over 1966 and 21.0 p.c. higher than in 1964. Females accounted for 23.6 p.c. of total employment in manufacturing. With female earnings rising slightly more rapidly than male earnings over the period, the ratio of male to female average weekly earnings fell marginally from 1.88 in 1964 to 1.83 in 1967. Average weekly hours of female employees in October 1967 were 37.7 hours, as compared to 41.0 hours for male employees.

Wage-earners

Average weekly earnings of female wage-earners reported rose \$4.98 from \$58.01 in October 1966 to \$62.99 in October 1967. This was the result of a 12-cent increase in average hourly earnings from \$1.51 to \$1.63; average weekly hours fell 0.5 hours from 38.4 to 37.9. Over the same period average weekly earnings of male wage-earners reported rose \$6.15 from \$105.45 to \$111.60, as average hourly earnings increased by 17 cents from \$2.50 to \$2.67. Average weekly hours fell 0.4 hours from 42.2 to 41.8. The relative changes from 1966 to 1967 in average hourly earnings for females and males were 7.9 and 6.8 p.c. respectively.

Compared to October 1964, average hourly earnings of female and male wage-earners were higher by 22.6 p.c. and 20.8 p.c. respectively. Average weekly hours for males were 0.8 hours lower and for females 0.9 hours lower. The resultant levels of average weekly earnings in 1967 were 22.4 p.c. higher for females and 18.6 p.c. higher for males than in 1964. The ratio of male-to-female average weekly earnings fell from 1.83 to 1.77.

Salaried Employees

Average weekly earnings of all female salaried employees reported increased \$5.23 from \$75.26 in October 1966 to \$80.29 in October 1967, while average

weekly hours fell slightly to 37.2 hours. Over the same period average weekly earnings of male salaried employees rose \$7.97 from \$147.95 to \$155.92, and average weekly hours fell slightly to 38.6 hours. The relative gains in earnings of females and males were 6.7 p.c. and 5.4 p.c. respectively. Compared to October 1964, female average weekly earnings were 20.7 p.c. higher and male average weekly earnings were 16.7 p.c. higher. The ratio of male to female average weekly earnings fell from 2.01 to 1.94. Average weekly hours for both males and females were 0.4 hours lower in 1967 than in 1964.

Average weekly earnings of female clerical and related workers were \$78.11 in October 1967 as compared to \$120.01 for their male counterparts. Females accounted for approximately 50 p.c. of the total of clerical and related workers in manufacturing. Average weekly earnings of female salaried employees other than clerical and related workers stood at \$101.07. The comparable figure for males was \$172.96. Females accounted for slightly less than 5 p.c. of all other than clerical salaried employees.

Provinces

Average hourly earnings of female wage-earners in manufacturing ranged from \$0.97 in Newfoundland to \$1.94 in British Columbia. Average hourly earnings of male wage-earners in manufacturing ranged from \$2.12 in Nova Scotia to \$3.18 in British Columbia. The ratio of male-to-female average hourly earnings ranged from 1.54 in Alberta to 2.27 in Newfoundland.

Compared to October 1966, the largest relative increase in average hourly earnings of female wage-earners was recorded in Nova Scotia (12.6 p.c.), the smallest in Saskatchewan (4.4 p.c.). The largest relative increase in average hourly earnings of male wage-earners was recorded in New Brunswick (11.0 p.c.), the smallest in Saskatchewan (5.7 p.c.).

Average weekly earnings of female salaried employees in manufacturing ranged from \$61.13 in Nova Scotia to \$82.00 in Ontario. Average weekly earnings of male salaried employees ranged from \$127.81 in Nova Scotia to \$167.84 in British Columbia.

In the year-over-year comparison, the largest relative increase in average weekly earnings of female salaried employees was recorded in Alberta (9.1 p.c.), the smallest in Nova Scotia (2.1 p.c.). The largest relative increase in average weekly earnings of male salaried employees was recorded in Alberta (8.3 p.c.), the smallest in New Brunswick (3.0 p.c.).

THE ANNUAL SURVEY OF EARNINGS AND HOURS IN MANUFACTURING AND RELATED SERIES

Descriptive Notes

The annual survey of earnings and hours of men and women working in manufacturing establishments covers the last week of October, and provides data supplementing those already collected in the Employment Section's monthly surveys of employment, payrolls and man-hours. Related data are also obtained through the Census of Manufactures conducted by the Manufacturing and Primary Industries Division of the Dominion Bureau of Statistics and the survey of wage rates, salaries, and hours of labour conducted by the Economics and Research Branch, Department of Labour. But since these are primarily designed to serve different purposes, they vary in coverage, content and the definitions of the various terms used. The following paragraphs provide information on the data contained in the present publication and highlight some of the areas of differences between it and the other series.

1. The Annual Survey of Earnings and Hours of Work in Manufacturing

General

The annual survey of earnings and hours of work in manufacturing became a regular feature of the Employment Section in 1946 after the responsibility for conducting this survey was transferred thereto. This survey involves collection of separate data on earnings and hours of work paid for, from manufacturing establishments, relating to a week in the autumn of each year, for male and female employees classified as wage-earners and salaried employees. Series compiled on the basis of additional information collected through this survey are given below for the indicated year.

- (a) Percentage distribution of male and female wage-earners by hours worked, or paid for, in the survey week, from 1946 to 1949, 1952, 1955, 1958 and 1965.
- (b) Percentage distribution of male and female wage-earners and salaried employees by earnings in the week, in 1950, 1953, 1956, 1959, 1964 and 1967.
- (c) Earnings and hours of general office and clerical workers segregated in 1951, 1954, 1957, 1959, 1960 and each year since 1963 from data for administrative, professional, supervisory and other salaried employees.

The survey was not conducted in the years 1961 and 1962 but was resumed in 1963.

Coverage

All manufacturing establishments employing 20 or more persons in any month of the year are included in the scope of this enquiry. Although the total number of establishments covered in this annual survey constitutes only one third of the total

establishments reporting to the Annual Census of Manufacturers conducted by the Manufacturing and Primary Industries Division, it covers approximately 90 per cent of the total number of employees working in the manufacturing industries of Canada. The difference in the employment total obtained from the annual survey of earnings and hours from that obtained as an average of monthly surveys regularly amounts to about 1 per cent.

Commencing with the 1966 survey and reflected in the revised data for 1963, 1964 and 1965 employment, earnings and hours data are based on the new concept of the establishment and the 1960 Standard Industrial Classification. According to the latter, an "establishment" is defined as the smallest unit which is a separate operating entity capable of reporting all elements of basic industrial statistics including employment and payroll data. Activity reports for branches are segregated and allocated by geographical location.

While under the 1948 classification system manufacturing industries were grouped into 17 major industrial groupings, the revised classification system provides 20 major groupings in this area. Furniture and Fixture industries is a new grouping which includes the old furniture industry plus establishments manufacturing furniture which were formerly included with the metal and miscellaneous industry groups.

Primary Metals, Metal Fabricating industries and Machinery industries (except electrical) are groupings according to the new classification system replacing the former Iron and Steel Products and Non-ferrous Metal Products industrial groupings. Changes within metal and machinery industries as well as within Electrical Products and Chemicals and Chemical Products groupings are complex. The resulting series must be regarded as being distinct from the previous series in content. It now conforms to those published in our monthly publications and in all publications in the Manufacturing and Primary Industries Division.

The revised industrial classification system has resulted in some establishments formerly reporting to manufacturing being transferred to other categories. This has changed the industrial content of the Transportation Equipment Industry, particularly, since this grouping has been reduced by railway shops which now report as a sector of Transportation, Communication and Other Utilities. On balance, the change to the 1960 S.I.C. had no significant effect on the numbers of employees in manufacturing in total.¹

¹ When assessing data published on the revised basis it should be kept in mind that the recapitulation procedure used in tabulating information for the years prior to 1966 excluded those activities formerly reporting to industrial sectors other than manufacturing.

Concepts and Definitions

Employees.—The survey covers all full-time, part-time and casual wage-earners and salaried employees of reporting establishments who are paid for rendering current services or are on paid absence during the survey week. Casual employees working less than the equivalent of one full day in the survey week and other employees not receiving pay for any time during the reference period are not included.

The "employee" concept excludes working owners and partners of unincorporated businesses and proprietors and other members of the board of directors of corporations (even if they are actively engaged in the operation of the establishment), home-workers, pensioners, and persons providing services to an establishment on the basis of a contract for services.

Wage-earners are defined as production and ancillary workers, including working foremen, route-drivers, shipping, delivery and maintenance staffs, and related employees.

Salaried employees comprise executive, administrative, supervisory and professional personnel, and travelling salesmen, directly responsible to the administration as well as general office and clerical workers in the office and plant, for whom statistics are segregated.

Hours include full-time, short-time and overtime hours worked and any hours of paid absence in the week. Establishments are asked to estimate the hours as closely as possible for employees whose hours of work are not recorded.

Earnings comprise gross pay for the week, before deductions for taxes, unemployment insurance contributions, etc. Gross pay includes salaries, straight-time wages, piecework and commission earnings, regularly-paid incentive, cost-of-living and other bonuses, overtime earnings and payments to persons absent with pay in the survey week. The payroll concept does not include supplementary labour costs, operational costs or payments unrelated to the survey week. Thus the data do not include such items as employer's contributions to unemployment insurance, medical plans, workmen's compensation, other welfare plans, the value of room and board, compensation in kind, travelling expenses, retirement gratuities, or bonuses paid at irregular or infrequent intervals.

Durable goods manufacturing industries include wood products, furniture and fixtures, primary metal industries, metal fabricating industries, machinery (except electrical), transportation equipment, electrical products and non-metallic mineral products. All other manufacturing industries are designated as non-durable goods.

Completion of the Questionnaire.—Establishments differ to some extent in their classification of employees as between wage-earners and

salaried staff but it is felt that this does not significantly affect the validity of the data. Somewhat greater difficulty is experienced in distinguishing clerical and related workers from supervisory and professional staffs and certain categories of workers are known to be reported differently in successive surveys. While these factors may cause variations in the averages in comparatively small industry and area units, they rarely affect the year-to-year comparisons of the aggregate data.

2. Monthly Surveys of Employment, Payrolls and Man-hours

Statistics obtained in monthly reports from the manufacturing establishments reporting to the annual survey of earnings and hours of work in manufacturing are included in "Employment and Average Weekly Wages and Salaries" and "Man-hours and Hourly Earnings", briefly described on the second page of this publication. The same general definitions of employees, hours, and earnings are used, and the averages for manufacturing in the October publications vary very slightly from those obtained in the annual survey, as indicated below for October, 1966.

| Average | Unit | Annual survey | Monthly survey |
|--------------------------------------|------|---------------|----------------|
| Weekly wages and salaries | \$ | 110.07 | 109.32 |
| Weekly wages | \$ | 100.27 | 99.88 |
| Hourly earnings of wage-earners | \$ | 2.45 | 2.45 |
| Weekly hours of wage-earners | No. | 40.9 | 40.8 |

Two factors are largely responsible for the existing differences between the two series: (1) The monthly surveys call for data for the last pay period in the month. When this period exceeds a week, the calculated weekly equivalents of reported payrolls and hours may differ from statistics accumulated from individual pay records for the annual survey week. The effect on the overall averages is slight, but tends to be somewhat greater in industries or areas where longer pay periods are common, particularly if seasonal changes are in process. (2) The monthly reports on man-hours and wages relate only to wage-earners for whom records of hours are maintained, resulting in exclusion of most route-drivers, some pieceworkers and certain others not paid on an hourly basis, in all amounting to about 3 per cent of the wage-earners. Comparability with the annual data is appreciably affected only in industries such as food and beverages, and in areas such as Saskatchewan, where records of hours are not currently available for a fairly substantial proportion of wage-earners. In addition to the above-mentioned points of difference, such factors as the substitution of a selected normal week in order to avoid strike periods in the annual survey and occasional changes in industrial

classification or in reporting procedures subsequent to publication of the monthly statistics may contribute to some variations in the averages computed in the two surveys, particularly in small industry and area units.

3. Annual Census of Manufactures

Since 1917 the Dominion Bureau of Statistics has conducted an annual Census of Manufactures. Data are collected on a wide range of inputs including employment, payroll and man-hours. These are collected together with output data on both manufacturing and non-manufacturing activity.

Since the adoption of the New Establishment Concept and the revision to the 1960 Standard Industrial Classification reporting entities have become more standardized throughout the Dominion Bureau of Statistics.

Questions on owner-operator employment and withdrawals are included on the census questionnaire and these data are segregated from tabulations of employment and payrolls. Since 1956, data on man-hours have been incorporated in the census for productivity measurement purposes. In 1966, estimates of these data relating to executive and administrative staffs were collected as a supplement to information collected formerly. Man-hours data for both administrative staff and production workers are collected on a yearly basis. Information relating to the number of male and female employees, (but not to their payrolls), is reported separately in the annual Census of Manufactures reports. Executive, administrative and office staff are reported on the basis of an annual average whereas production and related employees are reported for the last pay period of each month. Gross payrolls for the year are reported for each class of employee.

Statistics obtained from the annual Census of Manufactures are first published in the Manufacturing and Primary Industries Division's 135 individual industry reports.

Comprehensive reports are published for the series as follows:

| Catalogue number | Title |
|------------------|---|
| 31-201 | General Review of the Manufacturing Industries of Canada. |

Manufacturing Industries of Canada:

| | |
|--------|--|
| 31-203 | Section A - Summary for Canada |
| 31-204 | Section B - Atlantic Provinces |
| 31-205 | Section C - Quebec |
| 31-206 | Section D - Ontario |
| 31-207 | Section E - Prairie Provinces |
| 31-208 | Section F - British Columbia, Yukon and Northwest Territories. |

4. Wage Rates, Salaries and Hours of Labour

Since 1901, the Department of Labour has collected annually from many thousands of manufacturing establishments information on wage rates of time workers and straight-time earnings of piece and other incentive workers in representative occupations of a non-supervisory nature. Results of the survey are published in the form of weighted averages and predominant ranges of rates for typical occupations in numerous industries and of index numbers of average wage rates, in relatively fine industrial detail. Information on average weekly salaries in typical office occupations and on average wage rates in maintenance and service occupations is published for 52 Canadian communities. Data on standard hours of work are also provided for most industries.

This wage and salary information is contained in the annual report entitled, "Wage Rates, Salaries and Hours of Labour" which is published as a loose-leaf table service for the industries and communities covered. These tables are later published as a bound volume. The monthly Labour Gazette also publishes information on employment, earnings, working conditions, terms of settlement in major collective agreements and related subjects.
