COMMENTARY

Earnings and Hours of Work in Manufacturing, Last Week in October, 1969

Average weekly earnings of all male employees reported in manufacturing in the last week of October 1969 were \$142.36 as compared to \$133.08 in October 1968. This gain of \$9.28 represented an increase of 7.0 p.c. over 1968 and 22.5 p.c. from 1966. The average for all females, who accounted for 23.8 p.c. of total employment in manufacturing, was \$72.25 in October 1969. This was a rise of 8.8 p.c. from 1968 and was 24.8 p.c. higher than the 1966 level. With female earnings rising more rapidly than male earnings over the period, the ratio of male-to-female average weekly earnings fell slightly from 1.85 to 1.81 in 1969.

In 1969 average weekly hours for women were 37.6 compared to 40.7 for men. For both male and female employees reported, these levels are 0.1 hours lower than the 1968 level. From 1966 average weekly hours have decreased from 38.1 hours for women and 41.3 hours for men. Over the four-year period, the difference in levels of average weekly hours between male and female employees has narrowed, indicating a relatively greater decline in average weekly hours for male employees reported.

Wage-earners

Female wage-earners recorded a 9.3 p.c. rise of \$8.13 to \$72.39 from October 1968. This change reflects an 18-cent increase in average hourly earnings from \$1.74 to \$1.92 which more than offset a 0.3-hour decline in average weekly hours from 38.1 hours to 37.8 hours. Over the same period average weekly wages of male wage-earners reported at \$129.35 were \$9.01 or 7.3 p.c. higher than the 1968 level of \$120.34. This was the result of a 24-cent gain in average hourly earnings from \$2.88 to \$3.12; average weekly hours fell 0.3 hours from 41.7 to 41.4.

Compared to October 1966 average hourly earnings of female and male wage-earners were higher by 27.2 p.c. and 24.8 p.c., respectively. Lower average weekly hours of 0.6 hours and 0.8 hours were recorded for females and males, respectively. The resultant levels of average weekly earnings in 1969 were 24.8 p.c. higher for females and 22.7 p.c. higher for males than in 1966. The ratio of male-to-female average weekly earnings fell from 1.82 to 1.78.

Salaried Employees

Average weekly earnings of female salaried employees increased \$9.30 from \$83.56 in October 1968 to \$92.86 in October 1969; average weekly

hours rose 0.3 hours to 37.3. Over the same period average weekly earnings of all male salaries employees reported at \$178.60 were \$15.04 higher than the 1968 level of \$163.56, and average weekly hours rose 0.3 hours to 38.8 hours. The relative gains in earnings of females and males were 11.1 p.c. and 9.2 p.c., respectively. Compared to 1966 female average weekly earnings were 23.4 p.c. higher and male average weekly earnings, 20.7 p.c. higher. The ratio of male-to-female average weekly earnings dropped from 1.97 to 1.92. Average weekly hours for males showed no change from 1966; for females, were 0.1 hours lower.

In the clerical and related workers group, average weekly earnings of females were \$90.39 in October 1968 compared to \$142.50 for males. Women made up approximately 50 p.c. of the total of clerical and related workers in manufacturing. Average weekly earnings of female salaried employees other than clerical and related were \$114.98 in comparison to \$195.66 for males. About 5 p.c. of the other than clerical salaried employees were composed of women.

Provinces

Female wage-earners' levels of average hourly earnings ranged from \$1.22 in Newfoundland to \$2.26 in British Columbia. For male wage-earners, the lowest level of average hourly earnings was recorded in Nova Scotia (\$2.46); the highest in British Columbia (\$3.71). The ratio of male-to-female average hourly earnings ranged from 1.53 in Quebec to 2.20 in Newfoundland.

Compared to October 1968 the largest relative increase in female average hourly earnings was recorded in Newfoundland (24.5 p.c.), the smallest in Saskatchewan (3.3 p.c.). The largest relative increase in average hourly earnings of male wage-earners was recorded in Nova Scotia (24.5 p.c.), the smallest in Saskatchewan (5.1 p.c.).

Average weekly earnings of female salaried employees in manufacturing ranged from \$74.78 in New Brunswick to \$94.43 in Quebec. Average weekly earnings of male salaried employees ranged from \$140.94 in Newfoundland to \$193.44 in British Columbia.

In the year-over-year comparison, the largest relative increase in average weekly earnings of female salaried employees was recorded in Newfoundland (23.3 p.c.), the smallest in British Columbia (7.2 p.c.). The largest relative increase in average weekly earnings of male salaried employees was recorded in Nova Scotia (13.2 p.c.), the smallest in Ontario (9.0 p.c.).

THE ANNUAL SURVEY OF EARNINGS AND HOURS IN MANUFACTURING AND RELATED SERIES

Descriptive Notes

The annual survey of earnings and hours of men and women working in manufacturing establishments covers the last week of October and provides data supplementing those already collected in the Employment Section's monthly surveys of employment, payrolls and man-hours. Related data are also obtained through the Census of Manufactures conducted by the Manufacturing and Primary Industries Division of the Dominion Bureau of Statistics and the survey of wage rates, salaries, and hours of labour conducted by the Economics and Research Branch, Department of Labour. But since these are primarily designed to serve different purposes, they vary in coverage, content and the definitions of the various terms used. The following paragraphs provide information on the data contained in the present publication and highlight some of the areas of difference between it and the other series.

1. The Annual Survey of Earnings and Hours of Work in Manufacturing

General

The annual survey of earnings and hours of work in manufacturing became a regular feature of the Employment Section in 1946 after the responsibility for conducting this survey was transferred thereto.¹ This survey involves collection of separate data on earnings and hours of work paid for, from manufacturing establishments, for male and female employees classified as wage-earners and salaried employees. Earnings and hours of general office and clerical workers are segregated from data for administrative, professional, supervisory and other salaried employees. The programme outlined for the establishment surveys in 1970, however, marks a change in respect of annual survey of earnings and hours. Instead of manufacturing, the 1970 survey will collect data from establishments in retail trade.

Methodology and Coverage

All manufacturing establishments employing 20 or more persons in any month of the year are included in the scope of this enquiry. Although the total number of establishments covered in this annual survey constitutes only one third of the total establishments reporting to the Annual Census of Manufactures conducted by the Manufacturing and Primary Industries Division, it covers approximately 90 per cent of the total number of employees working in the manufacturing industries of Canada. The difference in the employment total obtained from the annual survey of earnings and hours from that obtained as an average of monthly surveys regularly amounts to about 1 per cent.

¹ The survey was not conducted in the years 1961 and 1962 but was resumed in 1963.

Employment, earnings and hours data are based on the concept of the establishment and the 1960 Standard Industrial Classification. According to the latter, an "establishment" is defined as the smallest unit which is a separate operating entity capable of reporting all elements of basic industrial statistics including employment and payroll data. Activity reports for branches are segregated and allocated by geographical location.

Concepts and Definitions

Employees.—The survey covers all full-time, part-time and casual wage-earners and salaried employees of reporting establishments who are paid for rendering current services or are on paid absence during the survey week. Casual employees working less than the equivalent of one full day in the survey week and other employees not receiving pay for any time during the reference period are not included.

The "employee" concept excludes working owners and partners of unincorporated businesses and proprietors and other members of the board of directors of corporations (even if they are actively engaged in the operation of the establishment), home-workers, pensioners, and persons providing services to an establishment on the basis of a contract for services.

Wage-earners are defined as production and ancillary workers, including working foremen, route-drivers, shipping, delivery and maintenance staffs and related employees.

Salaried employees comprise executive, administrative, supervisory and professional personnel and travelling salesmen directly responsible to the administration as well as general office and clerical workers in the office and plant, for whom statistics are segregated.

Hours include full-time, short-time and over-time hours worked and any hours of paid absence in the week. Establishments are asked to estimate the hours as closely as possible for employees whose hours of work are not recorded.

Earnings comprise gross pay for the week, before deductions for taxes, unemployment insurance contributions, etc. Gross pay includes salaries, straight-time wages, piecework and commission earnings, regularly-paid incentive, cost-of-living and other bonuses, overtime earnings and payments to persons absent with pay in the survey week. The payroll concept does not include supplementary labour costs, operational costs or payments unrelated to the survey week. Thus the data do not include such items as employer's contributions to unemployment insurance, medical plans, workers' compensation, etc.

compensation, other welfare plans, the value of room and board, compensation in kind, travelling expenses, retirement gratuities, or bonuses paid at irregular or infrequent intervals.

Durable goods manufacturing industries include wood products, furniture and fixtures, primary metal industries, metal fabricating industries, machinery (except electrical), transportation equipment, electrical products and non-metallic mineral products. All other manufacturing industries are designated as non-durable goods.

Completion of the Questionnaire.—Establishments differ to some extent in their classification of employees as between wage-earners and salaried staff but it is felt that this does not significantly affect the validity of the data. Somewhat greater difficulty is experienced in distinguishing clerical and related workers from supervisory and professional staff and certain categories of workers are known to be reported differently in successive surveys. While these factors may cause variations in the averages in comparatively small industry and area units, they rarely affect the year-to-year comparisons of the aggregate data.

2. The Monthly Surveys of Employment, Payrolls and Man-hours

Statistics obtained in monthly reports from the manufacturing establishments reporting to the annual survey of earnings and hours of work in manufacturing included in "Employment and Average Weekly Wages and Salaries" and "Man-hours and Hourly Earnings", briefly described on the second page of this publication. The same general definitions of employees, hours, and earnings are used and the averages for manufacturing in the October publications vary slightly from those obtained in the annual survey, as indicated below for October 1969.

| Average | Annual survey | Monthly survey |
|---------------------------------------|------------------|-------------------|
| Weekly wages and salaries | \$ 127.13 | 125.93 |
| Weekly wages | \$ 116.11 | 114.87 |
| Hourly earnings of wage-earners | \$ 2.86 | 2.84 |
| Weekly hours of wage-earners | No. 40.6 | 40.4 |

Two factors are largely responsible for the existing difference between the two series:

- (1) The monthly surveys call for data for the last pay period in the month. When this period exceeds a week, the calculated weekly equivalents of reported payrolls and hours may differ from statistics accumulated from individual pay records for the annual survey week. The effect on the overall averages is slight, but tends to be some-

what greater in industries or areas where longer pay periods are common, particularly if seasonal changes are in process.

- (2) The monthly reports on man-hours and wages relate only to wage-earners for whom records of hours are maintained, resulting in exclusion of most route-drivers, some pieceworkers and certain others not paid on an hourly basis, in all amounting to about 3 per cent of the wage-earners. Comparability with the annual data is appreciably affected only in industries such as food and beverages and in areas such as Saskatchewan, where records of hours are not currently available for a fairly substantial proportion of wage-earners. In addition to the above-mentioned points of difference, such factors as the substitution of a selected normal week in order to avoid strike periods in the annual survey and occasional changes in industrial classification or in reporting procedures subsequent to publication of the monthly statistics may contribute to some variations in the averages computed in the two surveys, particularly in small industry and area units.

3. The Annual Census of Manufactures

Since 1917 the Dominion Bureau of Statistics has conducted an annual Census of Manufactures. Data are collected on a wide range of inputs including employment, payroll and man-hours. These are collected together with output data on both manufacturing and non-manufacturing activity.

Since the adoption of the New Establishment Concept and the revision to the 1960 Standard Industrial Classification reporting entities have become more standardized throughout the Dominion Bureau of Statistics.

Questions on owner-operator employment and withdrawals are included on the census questionnaire and these data are segregated from tabulations of employment and payrolls. Since 1956, data on man-hours have been incorporated in the census for productivity measurement purposes. In 1966, estimates of these data relating to executive and administrative staffs were collected as a supplement to information collected formerly. Man-hours data for both administrative staff and production workers are collected on a yearly basis. Information relating to the number of male and female employees, (but not to their payrolls), is reported separately in the annual Census of Manufactures reports. Executive, administrative and office staff are reported on the basis of an annual average whereas production and related employees are reported for the last pay period of each month. Gross payrolls for the year are reported for each class of employee.

Statistics obtained from the annual Census of Manufactures are first published in the Manufacturing and Primary Industries Division's 135 individual industry reports.

Comprehensive reports are published for the series as follows:

| Catalogue number | Title |
|------------------|---|
| 31-201 | General Review of the Manufacturing Industries of Canada. |

Manufacturing Industries of Canada:

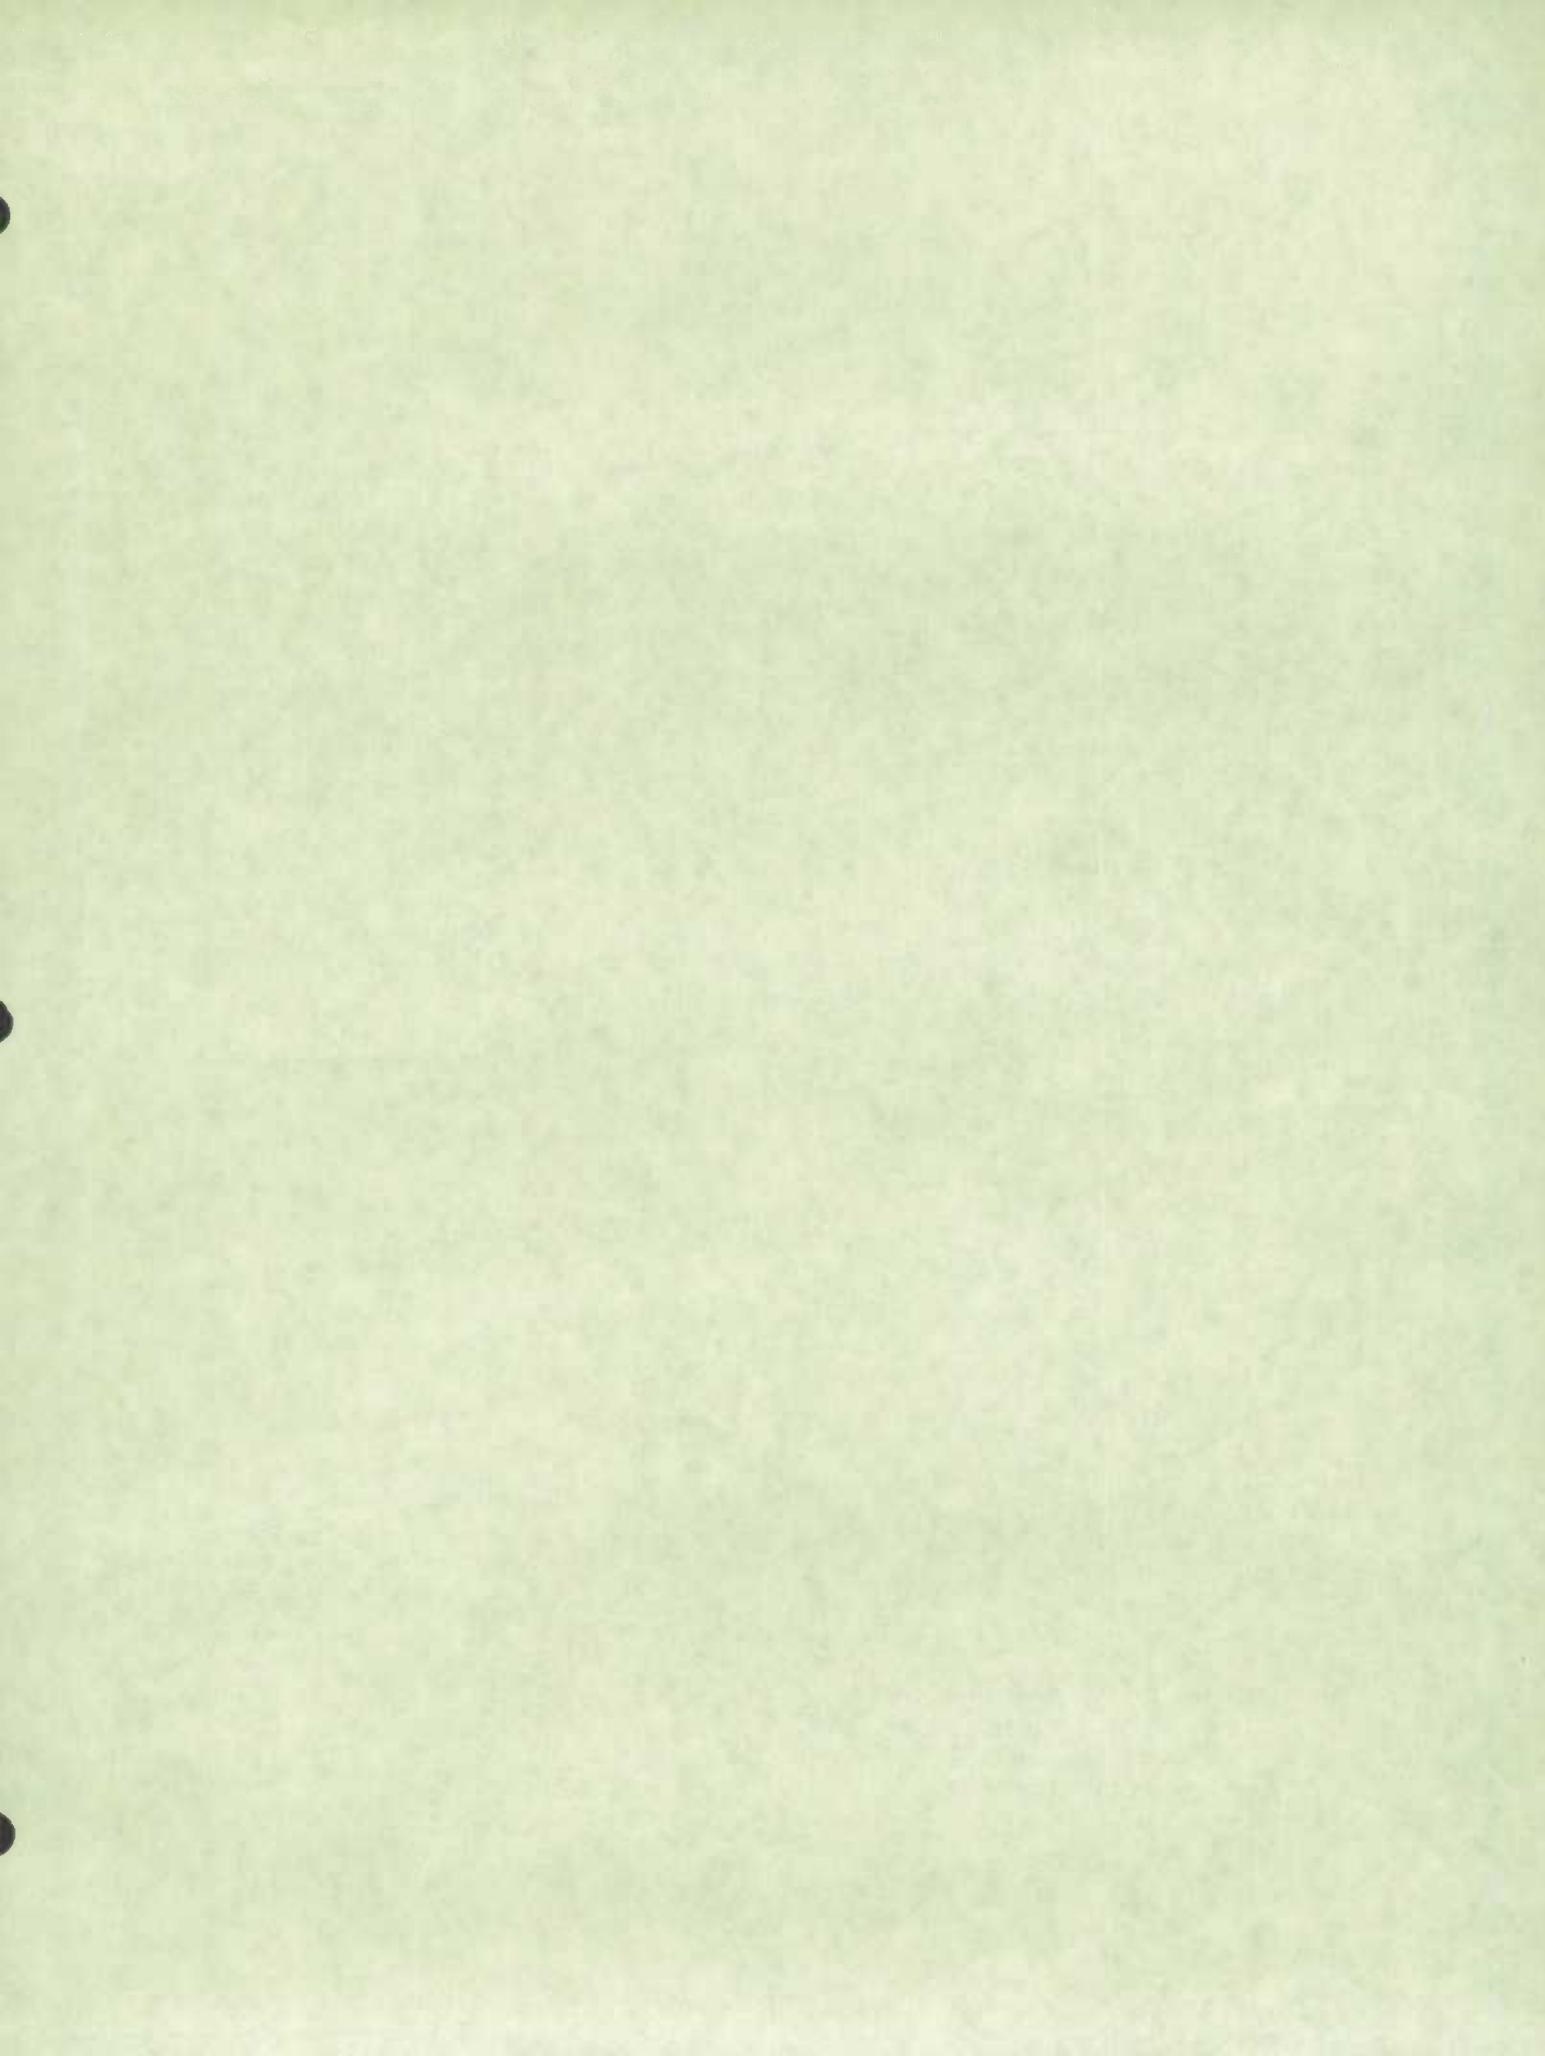

- 31-203 Section A - Summary for Canada
- 31-204 Section B - Atlantic Provinces
- 31-205 Section C - Quebec
- 31-206 Section D - Ontario
- 31-207 Section E - Prairies Provinces
- 31-208 Section F - British Columbia, Yukon and Northwest Territories.

4. The Survey of Wage Rates, Salaries and Hours of Labour

Since 1901, the Department of Labour has collected annually from many thousands of manufac-

ting establishments information on wage rates of time workers and straight-time earnings of piece and other incentive workers in representative occupations of a non-supervisory nature. Results of the survey are published in the form of weighted averages and predominant ranges of rates for typical occupations in numerous industries and index numbers of average wage rate in relatively fine industrial detail. Information on average weekly salaries in typical office occupations and on average wage rates in maintenance and service occupations is published for 52 Canadian communities. Data on standard hours of work are also provided for most industries.

This wage and salary information is contained in the annual report entitled, "Wage Rates, Salaries and Hours of Labour" which is published as a loose-leaf table service for the industries and communities covered. These tables are later published as a bound volume. The monthly Labour Gazette also publishes information on employment, earnings, working conditions, terms of settlement in major collective agreements and related subjects.
