CHART BOOK  
OF  
EMPLOYMENT AND PAYROLLS IN CERTAIN INDUSTRIES.

FOREWORD.

The charts on employment and payrolls in this publication bring forward the series established during the war by the Wartime Prices and Trade Board and continued by the Department of Reconstruction and Supply until 1946, when they were transferred to the Dominion Bureau of Statistics. In most cases, the graphs trace the course of employment in the larger industrial establishments in the period from 1939 to Sept. 1, 1948; the curves for the payrolls go back to June 1, 1941, the date on which the monthly record of weekly salaries and wages was commenced. The index numbers, based on June 1, 1941, have been charted in their original form, and in the form of 12 months' moving averages centered; since each item in the latter series is the average of an entire year, the seasonal fluctuations are largely eliminated, with the result that the trends over a period of years can easily be traced.

The curves represent the trends of employment and payrolls in establishments usually employing 15 persons and over. For practical reasons associated with the cost of collection and processing in terms of money and of time, the smaller businesses are excluded from the monthly surveys. This limitation of their scope results in an unequal coverage of the total employment in the various industries for which data are available, depending upon whether they are usually organized in large or small units of production or operation. Relatively high proportions of the total wage-earners employed in the various industrial divisions, however, are represented in all cases. The charts for the individual industries may therefore be regarded as accurately depicting the fluctuations in employment and other payroll data portrayed.

The provincial coverage of total employment except in Prince Edward Island and Saskatchewan is comparatively high, and also shows a considerable degree of uniformity. At the date of the Decennial Census of June 1, 1941, the monthly survey's percentages of coverage of the total wage-earners and salaried employees in all agricultural and non-agricultural industries varied from 52 p.c. in New Brunswick to 64½ p.c. in Ontario, while the Dominion proportion was 59 p.c.; the proportions in Prince Edward Island and Saskatchewan were relatively low, at 19 p.c. and 31 p.c., respectively. In the categories included in the monthly surveys, the range in the more highly industrialized provinces was also from seven points below in the case of New Brunswick to 5½ points above in Manitoba. In this comparison also the figures in Prince Edward Island and Saskatchewan were below-average, at 40 p.c. and 64 p.c., respectively. The general coverage in Canada at the Census date was over 79 p.c., a proportion which has since increased. While these provincial variations are not particularly marked, they call for consideration in a study of the regional trends. A point also to be remembered is that certain of the industries excluded from the monthly surveys, notably

THE UNIVERSITY OF CHICAGO  
LIBRARY

agriculture, domestic service, etc., did not share in the wartime expansion of employment which had particularly affected manufacturing and a few other divisions, in which the establishments furnishing monthly statistics employ exceedingly large proportions of the total working force.

Attention is also drawn to the fact that from time to time in the post-war period, the situation in many industries has been seriously affected by industrial disputes. In some cases, these strikes have indirectly affected the levels of employment and payrolls in numerous other industries. During 1946, the labour-management disputes in manufacturing were particularly serious. In 1947, the strike in coal mining in Nova Scotia accounted for the greatest loss in man-days of work. Industrial disputes in 1948 occasioned much smaller losses in employment and working days than in immediately preceding years.

In some cases, the industries for which charts are given employ rather small numbers of persons, with the result that minor changes will sometimes appear of greater significance than is warranted by their size. In this connection, attention is drawn to the statistics of numbers of employees reported by the cooperating establishments, as indicated on Pages III to VI. These tables show the industrial and geographical distribution of the employees reported by the firms furnishing statistics at Sept. 1, 1948, together with the index numbers of employment, as compared with the same date of earlier years:

- (1) 1939, representative of the levels existing at the outbreak of the Second Great War.
- (2) 1944, when recorded employment was practically at its wartime peak.
- (3) 1946, when post-war reconstruction was in process, and industrial disputes seriously affected the situation.
- (4) 1947, when the period of reconstruction was completed.

The charts in this publication have been adapted and many of them redrawn and remounted by Mr. J.W. Delisle, Chief Draughtsman of the Bureau.

A COMPARISON OF EMPLOYMENT AS REPORTED BY LEADING FIRMS REGIONALLY  
AND IN SPECIFIED INDUSTRIES AT SEPTEMBER 1, 1948

with:

1. Sept. 1, 1939, when employment was practically at the pre-war level
2. Sept. 1, 1944, when employment was practically at the war-time peak
3. Sept. 1, 1946, when the situation reflected the early stages of post-war reconversion
4. Sept. 1, 1947, when the period of reconversion was largely completed.

Faint text at the top of the page, possibly a header or title, is illegible due to blurriness.

The grid area contains very faint, illegible markings. On the right side of the grid, there is some faint vertical text that appears to be a page number, possibly '24'. At the bottom left, there is a small, faint number '100'.
