FOREWORD

In recent years there has been an increasing public demand for more detailed information regarding the distribution of the pay-rolls of the manufacturing industries of Canada among the individual wage-earners employed therein.

The present bulletin, including statistics compiled from a Supplemental Schedule sent out to all manufacturers reporting to the Census of Industry in respect to their operations in 1934, 1935 and 1936, endeavours to supply the information required. This schedule, which asks for numbers of male and female workers receiving weekly earnings of specified amounts for any week in the month of highest employment of the establishment, is reproduced at page 4. While the return of the completed schedule was not enforced by legal proceedings, it is estimated that returns were received and compiled in respect of at least 95 per cent of the wage-earners employed in the manufacturing industries of Canada.

The differences in the constitution of the wage-earning population of the two sexes, as shown by the Census of 1931, made it necessary for maximum usefulness that the information should be obtained and compiled separately in respect of the wage-earners of each sex. In this connection, the reader is referred to the chart at page 12, showing what may be called the earnings "pattern" for male and female wage-earners in Canadian manufacturing industries in 1936.

Salaried workers, such as managers, superintendents, professional and office or clerical employees, whose remuneration is on the average larger than that of wage-earning employees, were not included in the survey.

This bulletin, incorporating the results of the investigation, was compiled and written by Mr. A. Cohen, B. Com., Chief of the General Manufacturers Branch of the Bureau. It is believed that its contents will be useful to administrators, social workers, and others interested in the welfare of the wage-earning population.

R. H. COATS,
Dominion Statistician.

return

Taken in accordance with the requirements of the Statistics Act, the Census Act, and the Income Tax Act. Returns are obliged to supply replies to all inquiries made for the class relate to their particular industry. Returns subject to harsh punishment as an offence under the Act and the offender is liable upon summary conviction to a penalty not exceeding one hundred dollars and not less than twenty dollars or to imprisonment for a period not exceeding three months or to both fine and imprisonment. All returns will be held absolutely confidential. The information supplied by you will not be used as a basis of any system of taxation or disclosed to any minister or other person without your authority and no publication will be made of the census reports disclosing the operations of individual establishments.

Classified Weekly Wage Payments (Wage-earners only)

Enter below all manual workers whether skilled or unskilled who are engaged in the production or distribution end of your business. Include all workers whether paid on an hourly, daily, weekly, monthly or piece work basis. (Do not include managers, superintendents, professional and office or clerical employees.)

For any Full Week in Month of Employment Greatest Number	Males No.	Females No.	For any Full Week in Month of Employment Greatest Number	Males No.	Females No.
1 Under \$6.00			17 \$21.00 to \$21.99		
2 \$6.00 to \$6.99			18 17.00 to 22.99		
3 7.00 to 7.99			19 23.00 to 24.99		
4 8.00 to 8.99			20 24.00 to 24.99		
5 9.00 to 9.99			21 25.00 to 25.99		
6 10.00 to 10.99			22 26.00 to 26.99		
7 11.00 to 11.99			23 27.00 to 27.99		
8 12.00 to 12.99			24 28.00 to 28.99		
9 13.00 to 13.99			25 29.00 to 29.99		
10 14.00 to 14.99			26 30.00 to 34.99		
11 15.00 to 15.99			27 35.00 to 39.99		
12 16.00 to 16.99			28 40.00 to 44.99		
13 17.00 to 17.99			29 45.00 to 49.99		
14 18.00 to 18.99			30 50.00 and over		
15 19.00 to 19.99					
16 20.00 to 20.99					
			31 Total		

In the above table give an analysis of your payroll for any full week in the month of employment of greatest number. The actual amount paid to each person should form the basis of classification. For example, if a firm (in the month of highest employment) had the following payroll for one week, viz.—

Tom Jones	\$ 14.25
Mary Smith	10.80
Joseph Green	26.75
Violet Drew	10.00

its report would read as follows—In the males column, 1 in the line \$26.00 to \$26.99, 1 in the line \$14.00 to \$14.99 and in the female column, 2 in the line \$10.00 to \$10.99

Weekly Earnings in the Manufacturing Industries of Canada, 1934-36.

PART I—EXPLANATIONS AND DEFINITIONS

The present report embodies the results of a survey made for the years 1934, 1935 and 1936 of weekly earnings in the manufacturing industries of Canada. The survey was made in conjunction with the annual census of manufactures and throws considerable light on the subject of earnings. The need for information of this character was keenly felt some years ago when the Royal Commission on Price Spreads was making its investigations. Through its accountants the Royal Commission obtained information on weekly and hourly earnings for certain industries only. The Dominion Bureau of Statistics undertook the present survey for two reasons; first, to make available approximately similar information for all manufacturing industries, and, secondly, to implement in part the recommendations of the International Labour Office with regard to the obtaining of statistics of hours and earnings in manufacturing industries.

For a proper understanding of the nature of the information contained in this publication, the following explanations should be considered.

1. Scope of Survey.—A copy of the questionnaire appearing on page 4 was mailed to all manufacturers, who were required to return it with the annual report required under the Statistics Act. Making of this return was not, however, made compulsory. An endeavour was made to get as complete a coverage as possible through follow-up letters, but where this method failed no legal action was taken. Although exact figures are not available, yet it may be assumed that at least 95 per cent of the wage-earners engaged in manufacturing have been covered. The following table indicates the extent of the coverage.

Table 1.—Scope of Survey

	1934	1935	1936
Male wage-earners working in the month of highest employment*.....	353,075	376,015	408,050
Number covered by the survey.....	373,629	438,152	464,505
Female wage-earners working in the month of highest employment*.....	116,186	122,818	128,887
Number covered by the survey.....	127,544	142,530	148,628

*Figures taken from the census of manufactures. These figures include employees in central electric stations and in laundries, who are not now included in the tables in the Report of the Census of Manufactures.

In every year, the number covered by this survey for a single week has been greater than the monthly figures of wage-earners reported to the census of manufacturers. This is due to the fact that for each establishment the *survey was based on only one week in the month of highest employment in that establishment* and in most cases the number employed in the highest week exceeds the number employed during the whole month of highest employment. Again, in order to eliminate the factor of short-time employment as much as possible, the survey was confined to one week in the month of highest employment, as it was thought that in this week most of the workers would be working on full time. This method unfortunately could not eliminate short-time employment due to illness and for this reason the average weekly earnings are slightly understated.

2. Computation of Weekly Earnings.—As the total amount of the payroll for the week was not asked for, the computation of the average weekly earnings was laborious. The method employed is illustrated below. The following example is for male wage-earners employed in the small Rice-Milling Industry for 1936. On adding the individual returns received, the following results were obtained.

Table 2.—Example Showing Method of Computation of Weekly Earnings

Wage Groups	Number reported	Computation of* Average Earnings	
		\$	c
Under \$6.00.....	4	18	00
\$6.00 to 6.99.....	2	13	00
7.00 to 7.99.....	3	22	50
14.00 to 14.99.....	3	43	50
16.00 to 16.99.....	39	643	50
17.00 to 17.99.....	9	157	50
19.00 to 19.99.....	22	429	00
20.00 to 20.99.....	7	143	50
22.00 to 22.99.....	1	22	50
24.00 to 24.99.....	2	49	00
30.00 to 34.99.....	4	130	00
35.00 to 39.99.....	1	37	50
Totals.....	97	1,709	50
Average Earnings.....			17 62

NOTE.—*Average earnings for wage-earners receiving under \$6 were taken as \$4.50 while average earnings of wage-earners receiving \$50 and over were taken as \$60.

3. Computation of Annual Earnings.—From the statistics compiled for the census of manufactures it is impossible to ascertain the annual earnings of males and females separately. Only annual earnings for both male and female wage-earners taken together, can be calculated. As a direct result of the present survey on weekly earnings, it is now possible to calculate annual earnings for males and females separately. The following example illustrates the method employed.

From the census of manufactures it is found that in 1936 the Biscuit and Confectionery Industry reported an average annual employment of 3,875 male and 4,833 female wage-earners, with an aggregate payroll amounting to \$5,907,384. From the present survey it is found that average weekly earnings for males were \$17.97 and for females \$11.63. With these data available, annual earnings are calculated according to the following formula:

$$\begin{array}{rcl} \text{Male Earnings} & + & \text{Female Earnings} = \text{Total Payroll} \\ 3875x & + & 4833(.65x) = \$5,907,384 \\ & & 7016x = \$5,907,384 \\ & & x = \$842 \end{array}$$

In the above formula x equals the average annual earnings of males. Average weekly earnings of females being only 65 per cent of average male earnings ($\frac{\$11.63}{\$17.97} \times 100$), their annual earnings are therefore taken as .65 x .

From the formula it is found that average earnings of males are \$842, while average earnings of females, being 65 per cent of average earnings of males, equal \$547.

In computing annual earnings of males and females one assumption must be made, viz., that the proportion of earnings of females to earnings of males remains constant throughout the year. This is near the truth for industries employing large numbers of wage-earners. This conclusion is borne out by the data contained in the table below, which show that in industries employing large numbers of both males and females the proportion of weekly earnings of females to those of males varies but little from year to year. The changes from week to week in a single year must therefore be within even narrower limits than the annual changes.

Table 3.—Proportion of Weekly Earnings of Females to Weekly Earnings of Males in Selected Industries Employing Large Numbers of Both Male and Female Wage-Earners, 1934-36. (Weekly Earnings of Males = 1.000)

Industry	1934	1935	1936
Rubber goods, including footwear.....	.565	.586	.585
Biscuits, confectionery, cocoa, etc.....	.643	.648	.647
Tobacco, cigars and cigarettes.....	.672	.673	.698
Clothing, women's factory.....	.562	.561	.563
Clothing, men's factory.....	.542	.541	.541
Hosiery and knitted goods.....	.668	.684	.681
Cotton yarn and cloth.....	.764	.780	.780
Woollen cloth.....	.719	.740	.708
Slaughtering and meat packing.....	.558	.598	.593
Boots and shoes, leather.....	.690	.682	.691
Printing and bookbinding.....	.565	.563	.540
Electrical apparatus and supplies.....	.630	.636	.626
All industries.....	.581	.590	.583

For smaller industries, where the proportion of males to females changes appreciably and where marked changes also occur in the proportion of the various wage levels, this assumption is not always valid. This question is discussed further in the following paragraph "Limitations of the Arithmetical Average."

4. Limitations of the Arithmetical Average.—In using an average it is important to consider the nature of the series on which it is based. Although their composition differs widely, all of the following series of weekly earnings have the same average.

1. \$5, \$6, \$52—average \$21.
2. \$19, \$20, \$22, \$23—average \$21.
3. \$10, \$17, \$28, \$29—average \$21.
4. \$7, \$21, \$35—average \$21.

In the first series two employees receive low wages and one employee receives high wages, while in the second series all earnings centre about the average. The arithmetical average does not in these two cases indicate the economic well-being of the two groups. According to the average, the earnings are the same. In the first case the majority of workers are poorly paid, while in the second case they are all paid about the same, viz., about \$21 per week.

Owing to the nature of averages, it becomes difficult and in some cases impossible to measure changes from year to year or week to week. Even where aggregate earnings increase, the average may decrease in some cases. Such a condition may arise through the employment of proportionately larger numbers of lower paid workers in comparison with those at higher rates. This may best be illustrated by a concrete example. Due to an expansion in production, a factory took on 10 extra employees at minimum wages, and at the same time increased the wages of all employees, those previously at work as well as the new ones taken on, by \$1 per week. The weekly payroll of the two periods was as indicated in Table 4. The average, however, dropped from \$12.98 to \$12.21, in spite of the increase of \$1 per week. Caution must therefore be exercised in making deductions regarding changes in average earnings in the case of small industries. The composition of the series must be studied before valid conclusions may be drawn.

Table 4.—Statement Showing Possible Effect of Increased Employment upon Average Earnings

Total employees.....	21	31
Average earnings.....	\$12.98	\$12.21

PART II.—ANALYSIS OF WEEKLY AND ANNUAL EARNINGS

1. Analysis of Wage Rates.—Of the male wage-earners employed in the manufacturing industries of Canada in 1936, 28·1 per cent received over \$25 per week, 45·2 per cent received between \$15 and \$25, while the remaining, 26·7 per cent, received under \$15. In the case of females 20·9 per cent earned over \$15 per week, while 49·1 per cent earned between \$10 and \$15 and 30 per cent earned below \$10.

Manitoba had the largest percentage of male workers earning over \$25 per week, viz.: 40·3 per cent of the total, followed by Ontario with 32·6 per cent, Alberta 29·7 per cent, British Columbia, 27·9 per cent, Quebec 22·3 per cent, Saskatchewan 20·1 per cent, New Brunswick 15 per cent, Nova Scotia 14·5 per cent and Prince Edward Island 2·9 per cent. By major industrial groups, iron and its products came first with 42·8 per cent of the total earning over \$25 per week. This was followed by non-ferrous metal products with 38·1 per cent, miscellaneous industries 35·1 per cent, non-metallic mineral products 27·6 per cent, chemicals 26·7 per cent, wood and paper products 22·2 per cent, textiles and animal products each with 21·4 per cent, and vegetable products with 20·1 per cent.

In the case of female wage-earners, Ontario with 26·4 per cent had the largest percentage receiving over \$15 per week. Alberta with 25·2 per cent came next, followed by British Columbia with 24·1 per cent, Manitoba 19·8 per cent, Quebec 16·2 per cent, Saskatchewan 15·4 per cent, New Brunswick 7·8 per cent, Nova Scotia 6·1 per cent and Prince Edward Island 0·6 per cent. The iron and its products group with 37·0 per cent earning more than \$15 per week also came first in the case of females. This was followed by miscellaneous industries, non-ferrous metal products, textiles and textile products, etc.

The table following gives for 1936, the percentage distribution by income groups of male and female wage-earners separately, by provinces and industrial groups.

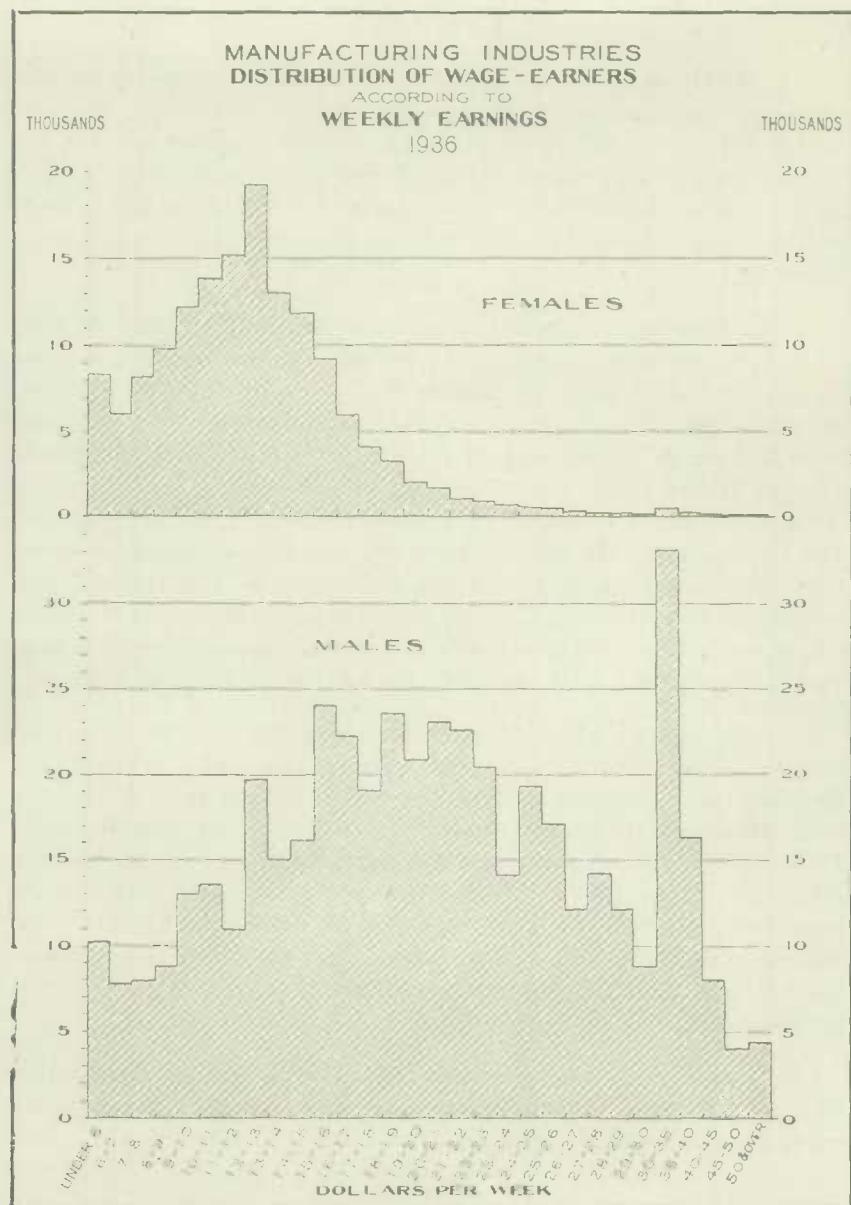

Table 5.—Percentage Distribution of Male and Female Wage-Earners, by Group of Earnings, Province, and Industrial Group, together with Average Weekly Earnings, 1936

¹Includes central electric stations.

Caution should be used in comparing earnings by provinces or groups. In order to make a legitimate comparison, the nature and type of industries comprised within the provinces or groups compared must be considered. In some industries such as textiles and food products, for example, the manufacturing processes require primarily (with many exceptions of course) a labour force possessing dexterity and speed, rather than the ability to exercise muscular strength or the possession of high-grade craftsmanship. In other industries, such as iron and steel, which amongst other things produce the machinery and equipment used by manufacturers in general, or in industries where technical and difficult processes are employed, the labour force must possess a high degree of technical skill. Workers in such industries naturally command relatively higher wages than those employed in industries using staffs whose occupations may be roughly defined as machine tenders.

2. Analysis of Weekly Earnings of Males and Females.—

Average weekly earnings of male wage-earners in the manufacturing industries of Canada as a whole amounted to \$20.92 in 1936, an increase of 61 cents as compared with 1934. Wage-earners in Manitoba received the highest average earnings of \$22.93 per week. British Columbia was second with \$22.60, followed by Ontario with \$22.27, Alberta \$21.10, Quebec \$18.99, Saskatchewan \$18.63, New Brunswick \$16.72, Nova Scotia \$16.35 and Prince Edward Island \$11.03. In comparing weekly earnings in major industrial groups, it was found that the iron and steel group reported the highest earnings of \$24.15 per week, followed by the other groups in the order named: central electric stations, \$24.09; non-ferrous metal products, \$23.31; non-metallic mineral products, \$21.23; chemicals and allied products, \$21.14; miscellaneous industries, \$20.46; wood and paper products, \$19.71; textiles and textile products, \$19.33; vegetable products, \$19.29; and animal products, \$19.

Average weekly earnings of female wage-earners employed in manufacturing industries amounted to \$12.20 in 1936, an increase of 40 cents as compared with 1934. Ontario workers with \$13.15 per week were paid the highest wages. British Columbia with \$13.01 ranked second, followed by Alberta with \$12.90, Manitoba, \$12.51, Quebec \$11.44, Saskatchewan \$11.36, Nova Scotia \$9.02, New Brunswick \$8.72 and Prince Edward Island \$6.38. By industrial groups, iron and its products with \$14.22 came first in the case of females also. This was followed by non-ferrous metal products with \$13.17, textiles and textile products \$12.78, non-metallic mineral products \$12.65, wood and paper products \$12.21, miscellaneous industries \$12.15, chemicals and allied products \$11.94, central electric stations \$11.50, vegetable products \$11.21 and animal products \$11.20.

For details of average weekly earnings by groups and provinces for 1934 to 1936 see table 11.

As explained in section 4 of Part I, caution must be used in comparing changes in average earnings from year to year. This is particularly necessary in considering the smaller industries or localities

where few workers are employed. It is quite possible for average earnings to decline during periods of accelerated operations, even though actual pay-rolls might rise. As illustrated by the example given, a proportionately greater increase of lower paid employees at such times would tend to reduce average earnings. To evaluate correctly changes in average weekly earnings, the data should be correlated with the changes in the distribution of the workers by wage groups. The table following, which gives the percentage distribution, by wage groups, of the workers employed in the manufacturing industries of Canada, shows that the increase of 61 cents per week between 1934 and 1936 in the earnings of male workers is an actual one. This is borne out by the decline in the percentage of wage-earners receiving under \$15 per week from 30·3 in 1934 to 26·6 in 1936, while the percentage of those receiving over \$15 rose from 69·7 to 73·4.

Table 6.—Cumulative Percentage Distribution of Male and Female Wage-Earners in Manufacturing Industries, by Weekly Earnings, 1934-36

For actual figures, see Table 21.

3. Analysis of Annual Earnings*.—Male wage-earners in British Columbia with \$1,097 had the highest annual earnings in 1936. Workers in Manitoba with \$1,057 ranked second, followed by Ontario with \$1,039, Alberta \$999, Saskatchewan \$958, Quebec \$902, Nova Scotia \$854, New Brunswick \$816, and Prince Edward Island \$550. Of the industrial groups, central electric stations with \$1,297 came first, followed by non-ferrous metals with \$1,138, iron and its products \$1,085, non-metallic mineral products \$1,084, chemicals and allied products \$1,061, wood and paper products \$973, vegetable products \$931, miscellaneous industries \$908, animal products \$884 and textiles and textile products \$876.

British Columbia also held the dominant position as regards average annual earnings of female workers, the amount reported being \$636. Ontario ranked second with \$613, followed by Alberta with \$609, Saskatchewan \$584, Manitoba \$581, Quebec \$541, Nova Scotia \$470, New Brunswick \$424 and Prince Edward Island \$319.

Female workers in the non-metallic mineral industries received the highest annual earnings of \$650. Those in the iron and its products group came second, with \$640, followed by the non-ferrous metal products group with \$637, wood and paper products \$603, chemicals and allied products \$594, textiles and textile products \$578, vegetable products \$540, miscellaneous industries \$536 and animal products \$520. It is interesting to note that of the female workers employed in manufacturing over 50 per cent are found in the textile group and that while male workers in the textile industries received \$119 less than the average for manufacturing in general, female workers received \$1 above the general average. The same is also true of weekly earnings.

For details of weekly earnings by groups and provinces see table 11, for details of annual earnings see the table below.

Table 7.—Average Annual Earnings of Male and Female Wage-Earners, by Province and Industrial Group, 1934-36

4. Analysis of Weekly and Annual Earnings, by Industries.

—The tables below give details of weekly and annual earnings for the forty industries employing the greatest number of male and female wage-earners in 1936. For male workers, the automobile industry held the first position with average earnings of \$30.15 per week. In only seven industries were weekly earnings above \$25. In 18 they ranged between \$20 and \$25, and in the remaining 15 they ranged between \$15 and \$20. Sawmills with \$15.85 per week had the lowest earnings of any of the forty leading industries.

The ranking of the industries as regards annual earnings is in most cases different to that of the weekly earnings. As annual earnings are the resultant of two factors, (a) weekly earnings and (b) the number of weeks worked during the year, marked differences appear in their ranking as compared with weekly earnings. Wire and wire goods, for example, ranked eleventh in weekly earnings, but only eighteenth in annual earnings, while breweries, although tenth in weekly earnings, were in seventh place as regards annual earnings. Many other marked differences are shown in the tables which follow.

Female workers in the fur goods industry ranked first in both weekly and annual earnings. It is interesting to note that in many of the textile and food industries, owing no doubt to the steadier employment afforded, the annual earnings rank higher than the weekly earnings. In only three of the industries employing the greatest number of female workers, did the weekly earnings average over \$15. In seven they ranged between \$13 and \$14, in seventeen between \$12 and \$13, in ten between \$10 and \$11, and in three under \$11. Weekly earnings for females ranged between \$16.15 in the fur goods industry and \$8.48 in fish packing plants, while annual earnings ranged between \$720 and \$320 for the same industries.
