

West Nile Virus and Other Mosquito-borne Diseases National Surveillance Report
English Edition
August 28 to September 3, 2016 (Week 35)

Canada

Humans:

During surveillance week 35, ending on September 3, 2016, fifteen (15) human clinical cases of West Nile virus (WNV) have been reported to the Public Health Agency of Canada (PHAC). Of these, four cases have been reported in Alberta [Calgary zone (1) and South zone (3)], six cases in Manitoba [Interlake-Eastern (1), Northern (1), Southern (3) and Winnipeg (1)], three cases in Ontario [Toronto (2) and Niagara (1)] and two cases in Quebec [Laval (2)].

As of surveillance week 35, a total of 31 human clinical cases have been reported to PHAC: Alberta (4) [Calgary zone (1) and South zone (3)], Manitoba (17) [Interlake-Eastern (3), Northern (1), Prairie Mountain (2), Southern (6) and Winnipeg (5)], Ontario (6) [Toronto (3), Niagara (2), York (1)], and Quebec (4) [Capitale-Nationale (1), Laurentides (1)*, Laval (2)]. Of these, eleven cases (35%) were classified as West Nile virus Neurological Syndrome, seven cases (23%) as West Nile virus Non-Neurological Syndrome, and thirteen cases (42%) were unclassified. One fatal case has been reported.

In addition, two West Nile virus asymptomatic infections have been reported: Saskatchewan [Mixed-Grass prairie * (1)] and Ontario [Toronto (1)].

Mosquitoes:

As of surveillance week 35, 288 (2.41 %) out of 11,953 mosquito pools have tested positive for WNV in Canada: Saskatchewan (67), Manitoba (39), Ontario (165) and Quebec (17).

Birds:

As of September 3, 2016, the Canadian Wildlife Health Cooperative, the Québec Ministry of Agriculture, Fisheries and Food, and the Québec Centre for Wildlife Health have examined a total of 56 dead birds for WNV: British Columbia (2), Saskatchewan (2), Ontario (46), and Quebec (6), of which 11 (20%) dead birds have tested positive for WNV: British Columbia (2) [Cranbrook], Ontario (5) [Bradford (1), Hamilton (1), Sarnia (1), Thorold (1), Toronto (1)] and Quebec (4) [Estrie (1), Lanaudière (1), Montérégie (1), Saint-Jean-Baptiste (1)]. The positive birds were identified as American Crows (55%), Red-tailed Hawks (18%), Merlins (9%), Sharp-shinned Hawks (9%), and Northern Goshawks (9%).

Domestic Animals:

As of September 3, 2016, the Canadian Food Inspection Agency has reported a total of 29 horses that have tested positive for WNV: British Columbia (8), Alberta (4), Manitoba (9), Ontario (1) and Saskatchewan (7).

In addition, one horse from Berthierville, Québec, has tested positive for Eastern Equine Encephalitis.

United States and U.S. territories

As of September 3, 2016, the Centers for Disease Control and Prevention have reported a total of 537 human clinical cases of West Nile virus disease in 39 states in the US, including the following border states: Washington (3), Idaho (2), Montana (3), North Dakota (11), Minnesota (14), Michigan (7), and Vermont (2). Of these, 264 (49%) were classified as neuroinvasive disease and 273 (51%) were classified as non-neuroinvasive disease. Fourteen fatal cases have been reported. In addition, 94 presumptive viremic blood donors have been identified.

Detailed information can be accessed via the CDC web site: <http://www.cdc.gov/westnile/statsmaps/preliminarymapsdata/histatedate.html>

Europe and Neighbouring Countries

As of September 3, 2016, 63 human cases of WNV have been reported in the European Union and 102 cases have been reported in the neighbouring countries.

Detailed information can be accessed via the ECDC web site:

http://ecdc.europa.eu/en/healthtopics/west_nile_fever/West-Nile-fever-maps/pages/index.aspx

*This case was acquired during WNV season in 2015

*Sun Country, Regina Qu'Appelle, Five Hills, Cypress, Heartland Health Regions

FIGURE 1: Geographic distribution of WNV in Humans (clinical cases) in Canada, as of September 3, 2016

FIGURE 2: WNV Human Clinical cases and Asymptomatic Infections, by Province/ Territory and by Report week, as of September 3, 2016

FIGURE 3: WNV Human Clinical cases and Asymptomatic Infections by Report week for selected years, in Canada

*West Nile virus clinical cases and asymptomatic infections are grouped by report week, based on episode date. Episode date could include one of the following: onset date, diagnosis date, lab sample date or reporting date.

TABLE 1: West Nile Virus Human Clinical cases and Asymptomatic Infections by Province/Territory for the current report week and year to date, 2016 season

	Week 35: August 28 to September 3, 2016					
	West Nile virus neurological syndrome	West Nile virus non-neurological syndrome	Unclassified/unspecified	Total clinical cases ¹	Number of travel-related cases ²	West Nile virus asymptomatic infection ³

Northwest Territory	0	0	0	0	0	0
Nunavut	0	0	0	0	0	0
Total	11	7	13	31	1	2

¹ Total clinical cases is the sum of both probable and confirmed: West Nile virus neurological and non-neurological syndromes, along with any unclassified or unspecified cases.

² Likely related to travel outside the Province/Territory. These cases are included in either the total clinical cases or West Nile virus asymptomatic infections.

³ Satisfies West Nile virus diagnostic test criteria in the absence of clinical criteria. This category could include asymptomatic blood donors whose blood is screened using a nucleic acid amplification test, by blood operators (i.e. Canadian Blood Services or Hema-Quebec) and is subsequently brought to the attention of public health officials. Blood operators in Canada perform a supplementary West Nile virus specific nucleic acid amplification test following any positive donor screen test result.

* One of the cases was acquired in 2015.

TABLE 2: Number of mosquito pools tested and number of positive mosquito pools by Province/Territory, 2016 season

Province	Year to date: January 1 to September 3, 2016 [≈]		
	Number of positive mosquito pools	Number of mosquito pools tested	Percentage of positive mosquito pools (%)
Quebec	17	607	2.80
Ontario	165	9398	1.76
Manitoba	39	1357	2.87
Saskatchewan	67	591	11.34
Total	288	11953	2.41

[≈]In 2016, mosquito surveillance is conducted by the following provinces only: Quebec, Ontario, Manitoba and Saskatchewan

[†]Detailed West Nile virus mosquito surveillance data can be accessed through Provincial/ Territorial websites.

- These jurisdictions do not maintain regular mosquito surveillance.

FIGURE 4: Reported number of dead birds tested positive for WNV by Province/ Territory and by Report week, 2016 season in Canada

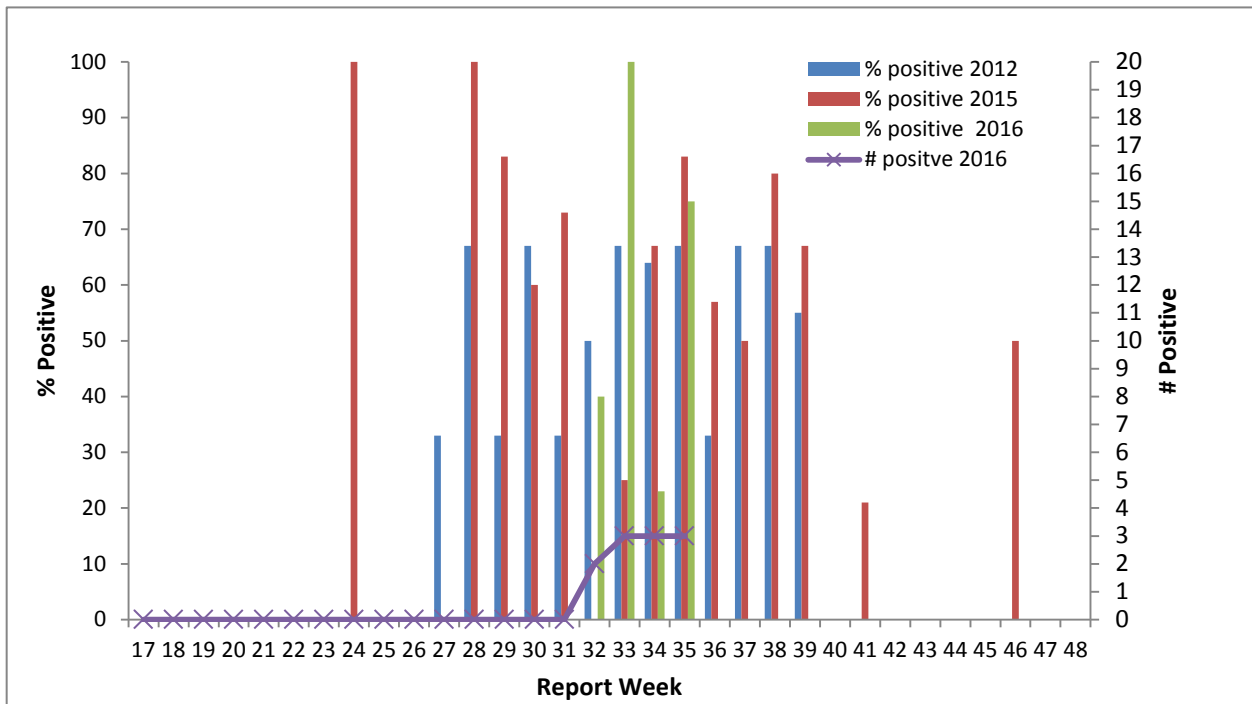

FIGURE 5: Percentage of dead birds tested positive for WNV by Report week in 2012, 2015 and 2016, and number of dead birds tested positive for WNV, by Report week, 2016, in Canada ¶

¶ Not all provinces are conducting dead bird surveillance as part of their own WNV surveillance program. However, WNV positive dead birds may be identified through the National Wildlife Disease Surveillance Program of the Canadian Wildlife Health Cooperative (CWHC)
