SUBSECTION IV.

THE AUTOMOTIVE AND MECHANICAL TRADES.

In view of the large number of mechanics required for and trained by the Armed Services, the Commission has paid particular attention to the proposals connected with the re-establishment of veterans having qualifications in the automotive trades.

(1) ASSESSMENT AND VALUE OF SERVICE TRAINING.

For the purpose of clarity these will be divided into (a) pre-war mechanics and apprentices; (b) in-service trained mechanics.

Automotive mechanics and apprentices with pre-war experience (civilian tradesmen) were available for the Armed Services in reasonable numbers only until 1941. This class of tradesmen does not constitute any problem in the rehabilitation scheme, for the reasons enumerated throughout this section. The problem arises with the Armed Service trained mechanic who, from 1941 on, constituted personnel who were selected as being suitable, and who had aptitude and youth in their favour, for training to Army requirements and in this connection advisance must be taken of the fact that this training was of such a nature as to fit these men very adequately for the demands of the Armed Services without regard to post-war civilian standards. The service training courses were of necessity reduced to a minimum of time and were of a practical and theoretical nature. The basis of qualifications was a trade test, for the purpose of determining a man's qualifications to do the job that the Army required of him.

(a). By Lt.-Col. W. H. Bonds, Director of Trades Training (Report No. 5, Vol. II, page D3)

"the point I would like to make is that it

The first part of the document  
 discusses the general principles  
 of the system and the  
 various methods of  
 application. It is  
 divided into several  
 sections, each dealing  
 with a different aspect  
 of the subject. The  
 first section deals with  
 the theory of the  
 system, while the  
 second section deals  
 with the practical  
 application of the  
 system. The third  
 section deals with the  
 results of the  
 system, and the  
 fourth section deals  
 with the conclusions  
 drawn from the  
 study. The document  
 is written in a  
 clear and concise  
 style, and is  
 intended for the  
 use of students and  
 teachers alike. It  
 is a valuable  
 resource for anyone  
 interested in the  
 subject.

The second part of the document  
 discusses the various methods  
 of application of the system.  
 It is divided into several  
 sections, each dealing with  
 a different method. The  
 first section deals with the  
 method of application  
 in the classroom, while  
 the second section deals  
 with the method of  
 application in the  
 laboratory. The third  
 section deals with the  
 method of application  
 in the field, and the  
 fourth section deals  
 with the method of  
 application in the  
 home. The document  
 is written in a  
 clear and concise  
 style, and is  
 intended for the  
 use of students and  
 teachers alike. It  
 is a valuable  
 resource for anyone  
 interested in the  
 subject.

1 was not considered that a fully qualified trades-  
2 man could be produced in a trade school.

3 There are certain basic skills which can be  
4 given and which can be acquired, but unless these  
5 are applied by the tradesman at his job he very  
6 quickly loses them, and that has been one of the  
7 difficulties that we have had, to retain him long  
8 enough to solidify that experience and these skills  
9 which have been given him, considering that he  
10 has had no experience in that trade before.

11 The experience of the practical work is essential,  
12 and it can be obtained only on the equipment of the  
13 army, in the corps in which he is to be employed.  
14 It is therefore in some degree limited or narrowed;  
15 but on the other hand, he has to obtain speed in  
16 doing his work. That is one of the things which  
17 he has to acquire."

18 From the evidence submitted by officers of the  
19 corps of Royal Canadian Electrical and Mechanical  
20 Engineers who are now either operating their own  
21 automotive businesses or employed by the large auto-  
22 motive manufacturers or other employers, it is clearly  
23 evident that the exigencies of the Armed Services  
24 necessitated a high degree of specialization rather  
25 than all round mechanical application, for that reason  
26 the returning veterans without pre-war experience is  
27 not qualified to take his place in civilian operations,  
28 except in certain cases, without further training. A  
29 line of demarcation might be drawn between the conditions  
30 in Canada and those overseas, to the extent that the  
mechanic in Canada may have had a slightly better  
opportunity for a variation of work than was experienced  
overseas but much value cannot be attached to that as,  
generally speaking, the volume of work was always

The first part of the document  
 discusses the general principles  
 of the system and its  
 objectives. It is intended to  
 provide a clear understanding  
 of the scope and purpose of  
 the project. The following  
 sections will describe the  
 various components and  
 procedures involved in the  
 implementation of the system.  
 The first section will  
 describe the overall structure  
 of the system, including the  
 main components and their  
 interrelationships. The second  
 section will describe the  
 data management system,  
 including the database  
 structure and the methods  
 used for data storage and  
 retrieval. The third section  
 will describe the user  
 interface, including the  
 design and the methods  
 used for user interaction.  
 The fourth section will  
 describe the security  
 measures, including the  
 methods used for access  
 control and data protection.  
 The fifth section will  
 describe the performance  
 optimization techniques,  
 including the methods used  
 for load balancing and  
 resource management. The  
 sixth section will describe  
 the testing and validation  
 procedures, including the  
 methods used for unit  
 testing and integration  
 testing. The seventh  
 section will describe the  
 deployment and maintenance  
 procedures, including the  
 methods used for system  
 updates and backups. The  
 eighth section will describe  
 the conclusion and future  
 work, including the  
 methods used for system  
 evaluation and improvement.

1 ahead of the available supply of mechanics thereby  
2 necessitating line production methods or specialization  
3 in general over-haul work, in order to cope with the  
4 volume. The situation overseas from the evidence  
5 submitted by officers in charge of work-shops and  
6 higher formations indicates that the system of  
7 specialization was of necessity carried out to a very  
8 marked degree and that work calling for general skill  
9 and knowledge was without exception allocated to men  
10 who had previous civilian experience. These men were  
11 quickly detected by the officers in charge of work-  
12 shops and utilized for the purposes of work which could  
13 not be carried out by the less experienced personnel.  
14 This refers particularly to the classification of Army  
15 vehicle mechanics (AFV), (MV) and R.C.A.F. (MMMT) and  
16 does not include driver mechanics whose training and  
17 experience by virtue of the limitations imposed upon  
18 their activities in the service, could not be assessed  
19 as having a competency greater than that of a helper or  
20 a junior apprentice.

21 It is appreciated that the Army and Air Force  
22 whose veterans constitute the major problem had degrees  
23 of classification C, B and A, each classification requir-  
24 ing a laid down trade test, and that trainees leaving a  
25 trade school or service course would not be graded  
26 higher than C, and that a period of practical application  
27 of the knowledge gained was called for before con-  
28 sideration could be given to an up grading to class B  
29 or class A. However, since the exigencies of the Service  
30 did not permit the practical application of all these  
laid down requirements, the procedure was varied and  
may be best explained by quoting from the evidence  
presented to the Commission in Montreal under date of  
January 28, 1946.

1 (b) By Captain Appleby, R.C.E.M.E., now employed  
 2 by the Ford Motor Company of Canada Limited,  
 3 as follows:-

4 (Ref.: Report No. 84, Vol.K., page A18)

5 "Q. by Major Capes: Captain Appleby, you  
 6 have heard the discussion up to this point.  
 7 Have you anything further to add in relation  
 8 to the items which we have discussed?

9 A. No, I think not; except that in my  
 10 opinion of course that the Army skills as shown  
 11 on the qualifications of the different tradesmen  
 12 are sometimes away off, due to the same reasons  
 13 which I think were advanced by -- I have for-  
 14 gotten for the moment who it was -- and that  
 15 is the fact that we had specialists to whom we  
 16 were not allowed to give trades pay, such as  
 17 brake lining experts, motor rebuilders; so that  
 18 the sum and substance of their particular skills  
 19 was that they were not qualified as all-round  
 20 motor mechanics, they were rather trained in a  
 21 particular skill. That was due to the fact  
 22 that our requirements were specialized. Many of  
 23 them were quite qualified to do work as grade B  
 24 mechanics, but in order to give them the benefit  
 25 of trades pay we had to have them classified  
 26 into group A. But, if a grade A tradesman in  
 27 the Army had the skills as outlined he would be  
 28 in every way a good man, but very few grade A  
 29 tradesmen -- men in that class -- were fully  
 30 qualified."

Also: Report No. 84, Vol. K, page A21.

"One of the great difficulties of course  
 in regard to the number of mechanics coming out  
 of the army -- and I think that some people are

1 are not sufficiently impressed about this -- is  
2 that they are specialists in the repair, maintenance  
3 and replacements of components, shall I say, as such,  
4 but they have not had sufficient general work of the  
5 type usual to garage operation. We could take such  
6 people in and train them. As a matter of fact we  
7 have trained two C.W.A.O.'s -- they are just as  
8 good as the men, sir -- but they were not motor  
9 mechanics. They could assemble or disassemble  
10 an engine as quickly as any man, but still you  
11 would not classify them as all-round motor mechanics.  
12 In the larger shops generally where you have a  
13 production line type of repair set-up you could  
14 use men on one particular operation, you could  
15 take even youths in and train them in a very short  
16 time. That has been evidenced by the production  
17 during the war years in connection with practically  
18 everything; but that does not make them good general  
19 mechanics."

18 (c) By Major A. O. Drysdale, R.C.E.M.E., presently  
19 employed as Assistant Superintendent, Canada Cement  
20 Company Ltd., as follows:

21 (Reference: Report No. 84, Vol. X, page A25, line 25)

22 "Until 1944 most trade testing in the Canadian  
23 Army Overseas was carried out at Base with the  
24 result that standard tests were given and uniformity  
25 was obtained in the various trade groups. When the  
26 Canadian Army left for the Continent, it became  
27 necessary to delegate the task of trade testing  
28 to the field formations. Two conditions arose due  
29 to this change:

30 1. The interpretation, by the various formations,  
of the tests laid down by trade testing regulations  
were varied resulting in a loss of uniformity in

1 trade grouping.

2 E. The strictly practical man who previously  
3 would not obtain a high grading at Base due to  
4 his inability to do theory and simple mathematics,  
5 was given a better chance to upgrade himself.  
6 In the field formations more weight was given to  
7 practical work than the application of theory.

8 The degree of skill required in the Army  
9 for certain groups does not necessarily correspond  
10 to the same trade group in the equivalent civilian  
11 trade. For example:

12 'A mechanic receiving 'A' trades pay, repair-  
13 ing Army vehicles will not normally draw top pay  
14 in the automobile repair business unless he has  
15 had previous civilian experience.'

16 Many men have learned a trade in the Army.  
17 Others have increased their knowledge and have  
18 become more skilled, but to attempt to classify a  
19 man to civilian standards by the trade group he  
20 attained in the Army would create a false impression.

21 The greatest faults found in present methods  
22 of classifying veterans is that there is no uniformity  
23 in tests and that the emphasis is placed on oral  
24 questions.

25 A detailed knowledge of theory is desired  
26 but not essential in most trades. Theoretical  
27 knowledge alone is useless in a trade but be-  
28 comes evident in its application by increasing  
29 the trades-man's skill. Obviously a test that  
30 stresses the practical aspect of the trade is desired.

To fairly assess a veteran's knowledge and  
skill on civilian standards, it will become necessary  
to set up standards based on civilian requirements  
and then retrade test all veterans. These tests

1 should be drawn up in conformity with both trade  
2 Union and Employer classifications.

3 The following recommendations are submitted  
4 for your consideration:

- 5 1. Trade test standard should be drawn up based  
6 on civilian requirements.
- 7 2. Tests should be outlined so that Veterans  
8 could be placed either in a wage bracket or  
9 given credits towards an apprenticeship.
- 10 3. Trade tests should stress the candidate's  
11 practical aptitude.
- 12 4. Tests should be unbiased and full consideration  
13 should be given to language difficulties.
- 14 5. Tests should not be too short in duration and  
15 two to three days' tests should not be con-  
16 sidered excessive.
- 17 6. Tests should be carried out in technical  
18 schools or plants in order that candidates will  
19 have adequate facilities to demonstrate their  
20 skill."

21 (d) By Lt.-Col. L. D. McGee, R.O.E.M.E., as follows:  
22 (Ref.: Report No. 84, Vol. K, page A29)

23 "1. The Issuance of Competency Certificates.

24 In my opinion the certificates at present  
25 being granted to veterans on discharge are in  
26 many cases not a true indication of a veteran's  
27 status as a tradesman or craftsman in regard  
28 to civilian standards or requirements. A  
29 suggested revision to this policy in the event  
30 that complete re-tradetesting and reclassification  
is found to be too cumbersome and too slow  
to effect an efficient discharge system would  
be to have all craftsmen concerned carefully  
screened by competent technical boards versed

1 in industry's standard requirements or to develop  
2 practical time limit tests which will determine  
3 quickly the skill of the tradesmen concerned. These  
4 tests should be consistent with industry's require-  
5 ments and should in addition to being a test of special-  
6 ized knowledge, be so designed as to bring out the  
7 general knowledge of the veteran which would help  
8 the examining board to classify the tradesman as  
9 to his skill or weakness.

10 It is further suggested that vocational tests,  
11 if not already employed, might be useful in finally  
12 riving at the rating of the veteran. In many cases  
13 it might be found that the veteran, when measured  
14 by this scientific yardstick, has not the versatility  
15 of aptitudes his trade requires when followed as a  
16 civilian occupation. In other words, though he is  
17 perhaps capable of passing Army trade tests or courses,  
18 he does not possess to a full measure the patience,  
19 perseverance, thoroughness and the many other  
20 qualities required to perform a skilled job in industry  
21 and thus might tend to become a misfit in civilian life,  
22 though he will in all probability be highly success-  
23 ful in a vocation more suitable to his aptitudes.

24 "2. Value of experience and technical skills acquired  
25 by the veterans while in the Armed Forces.

26 This question is subject to debate as in certain  
27 trades the veteran had the opportunity to amplify  
28 his skill in all elements of his trade, while in others  
29 he was perhaps very limited as to his experience gain-  
30 ed and became an expert at only a part of the complete  
trade. Due to the system of repair necessitated in  
the Army by field limitations the tradesman, in many  
instances, was perhaps limited to effecting running  
repairs. In others he was privileged to change major

1 assemblies, it being the exception rather than the rule  
2 to effect repairs of an over-haul nature to complete  
3 major assemblies in the field. In these cases the trades-  
4 man developed his skill only along certain lines and the  
5 Army was satisfied if the craftsman was highly skilled at  
6 changing major assemblies, over-hauling minor components,  
7 effecting field adjustments and completing running repairs

8 It must be stressed, however, that Army trades  
9 training courses were designed with a view to giving the  
10 tradesman a complete working knowledge of all the aspects  
11 of his trade but it is my opinion that unless a craftsman  
12 is physically engaged on the development of what he learns  
13 on courses he is apt to forget the knowledge gained as  
14 the result of such courses and it is thus unfair to  
15 expect men fully qualified, perhaps only by courses, to  
16 have the skill of a trade which can come only by diligent  
17 application and the opportunity gained perhaps best by  
18 apprenticeship after training guidance.

19 3. If the experience or technical skills acquired by  
20 the veterans while in the Armed Forces should be  
21 supplemented by courses in technical schools or  
22 other institutions.

23 It is my belief that much can be done in the educa-  
24 tion of the veteran tradesmen in preparing them to take  
25 their place successfully in industry. Many tradesmen,  
26 in my opinion, both in civilian and Army life possess  
27 weak points and if a system can be developed to offset  
28 the Army tradesmen's weak points by practical courses he  
29 will be able to compete successfully with his civilian  
30 opposite number. Much will depend on the nature of the  
courses as the average Army tradesman is impatient to  
effect his discharge and get back to civilian life with  
the minimum loss of time and money to himself. Further,  
his attitude towards courses on a trade he has already  
taken many on, will in all probability, not be en-  
thusiastic.

1 It is my suggestion that these courses be run by  
2 civilian institutions and that Army discipline should  
3 not prevail. Further, attractions should be added by some  
4 policy of earning while learning. There are also many  
5 veteran tradesmen who will not require additional courses  
6 or refresher courses and would look on same as a hindrance  
7 rather than a help as regards expediting their civilian  
8 career. Such veterans should be carefully screened out, de  
9 also further study on subjects already very familiar to  
10 the veteran should be definitely avoided. Courses should  
11 also be designed to give veterans complete confidence in  
12 themselves on discharge to civilian life as it will be  
13 found that many veterans have never worked at a trade in  
14 civilian life and are thus totally unfamiliar with modern  
15 industry's economic structure, mass production methods and  
16 demands on human nature.

17 To summarize, in my estimation, veterans as a whole  
18 will definitely exhibit marked tendencies towards self-  
19 government and advancement and will have a thirst for  
20 knowledge accompanied by a keenness to make up for any  
21 shortcomings in their ability or training."

22 (e) By Brigadier G. M. Grant, C.B.E., Royal Canadian  
23 Electrical and Mechanical Engineers, who filled the appoint-  
24 ment of both Director of Mechanical Engineering at  
25 National Defence Headquarters and Deputy Director of  
26 Mechanical Engineering, 1st Canadian Army Overseas, and  
27 is now re-established with the Bell Telephone Co. of  
28 Canada, Ltd., Montreal:

29 (Ref.: Report No. 84, Vol. K, page A36)

30 "I have been very interested in hearing the

1 Technical Corps, whether it be the corps of Royal  
2 Canadian Electrical and Mechanical Engineers or  
3 whether it be the maintenance section of the Army  
4 Service Corps, the Signal Corps, or any other  
5 technical corps; they turned out a tremendous amount  
6 of excellent work. Naturally, in the Army you are  
7 going to find many men with varying degrees of skill,  
8 in spite of the fact that they may some of them be grade  
9 A tradesmen, grade B, or grade C. That is only  
10 natural that you should find these varying degrees of  
11 skills. Again, the Army system called for a certain  
12 organization or set-up that would only be found in  
13 the Army - never in civilian industry - that is,  
14 the speed with which repairs had to be made, the time  
15 in which to make them, and so on. All those factors  
16 entered into it. There were a great many mechanics  
17 trained in civilian industry who came into the Army  
18 with high skills. There is no question about that.  
19 Some of them of necessity had to become specialists.  
20 But in the first place they were good mechanics. They  
21 may admittedly have lost a part of their trade skills,  
22 but it would not take them very long to bring them-  
23 selves back if they had become specialized. That deals  
24 with the type of mechanic we had in the Army who  
25 came into the Army as a civilian trained mechanic. I  
26 have no fear for his future back in civilian industry.  
27 He knows the requirements of civilian industry, as far  
28 as the trade is concerned, and I am quite sure that he  
29 would get back on his own very quickly.

30 We come now to the soldier who came in and was  
trained as outlined by Captain Appleby, in the Army  
Trades Schools. He got an excellent basic training.  
However, he had to get practical experience. Some of  
them were given opportunities to work in certain

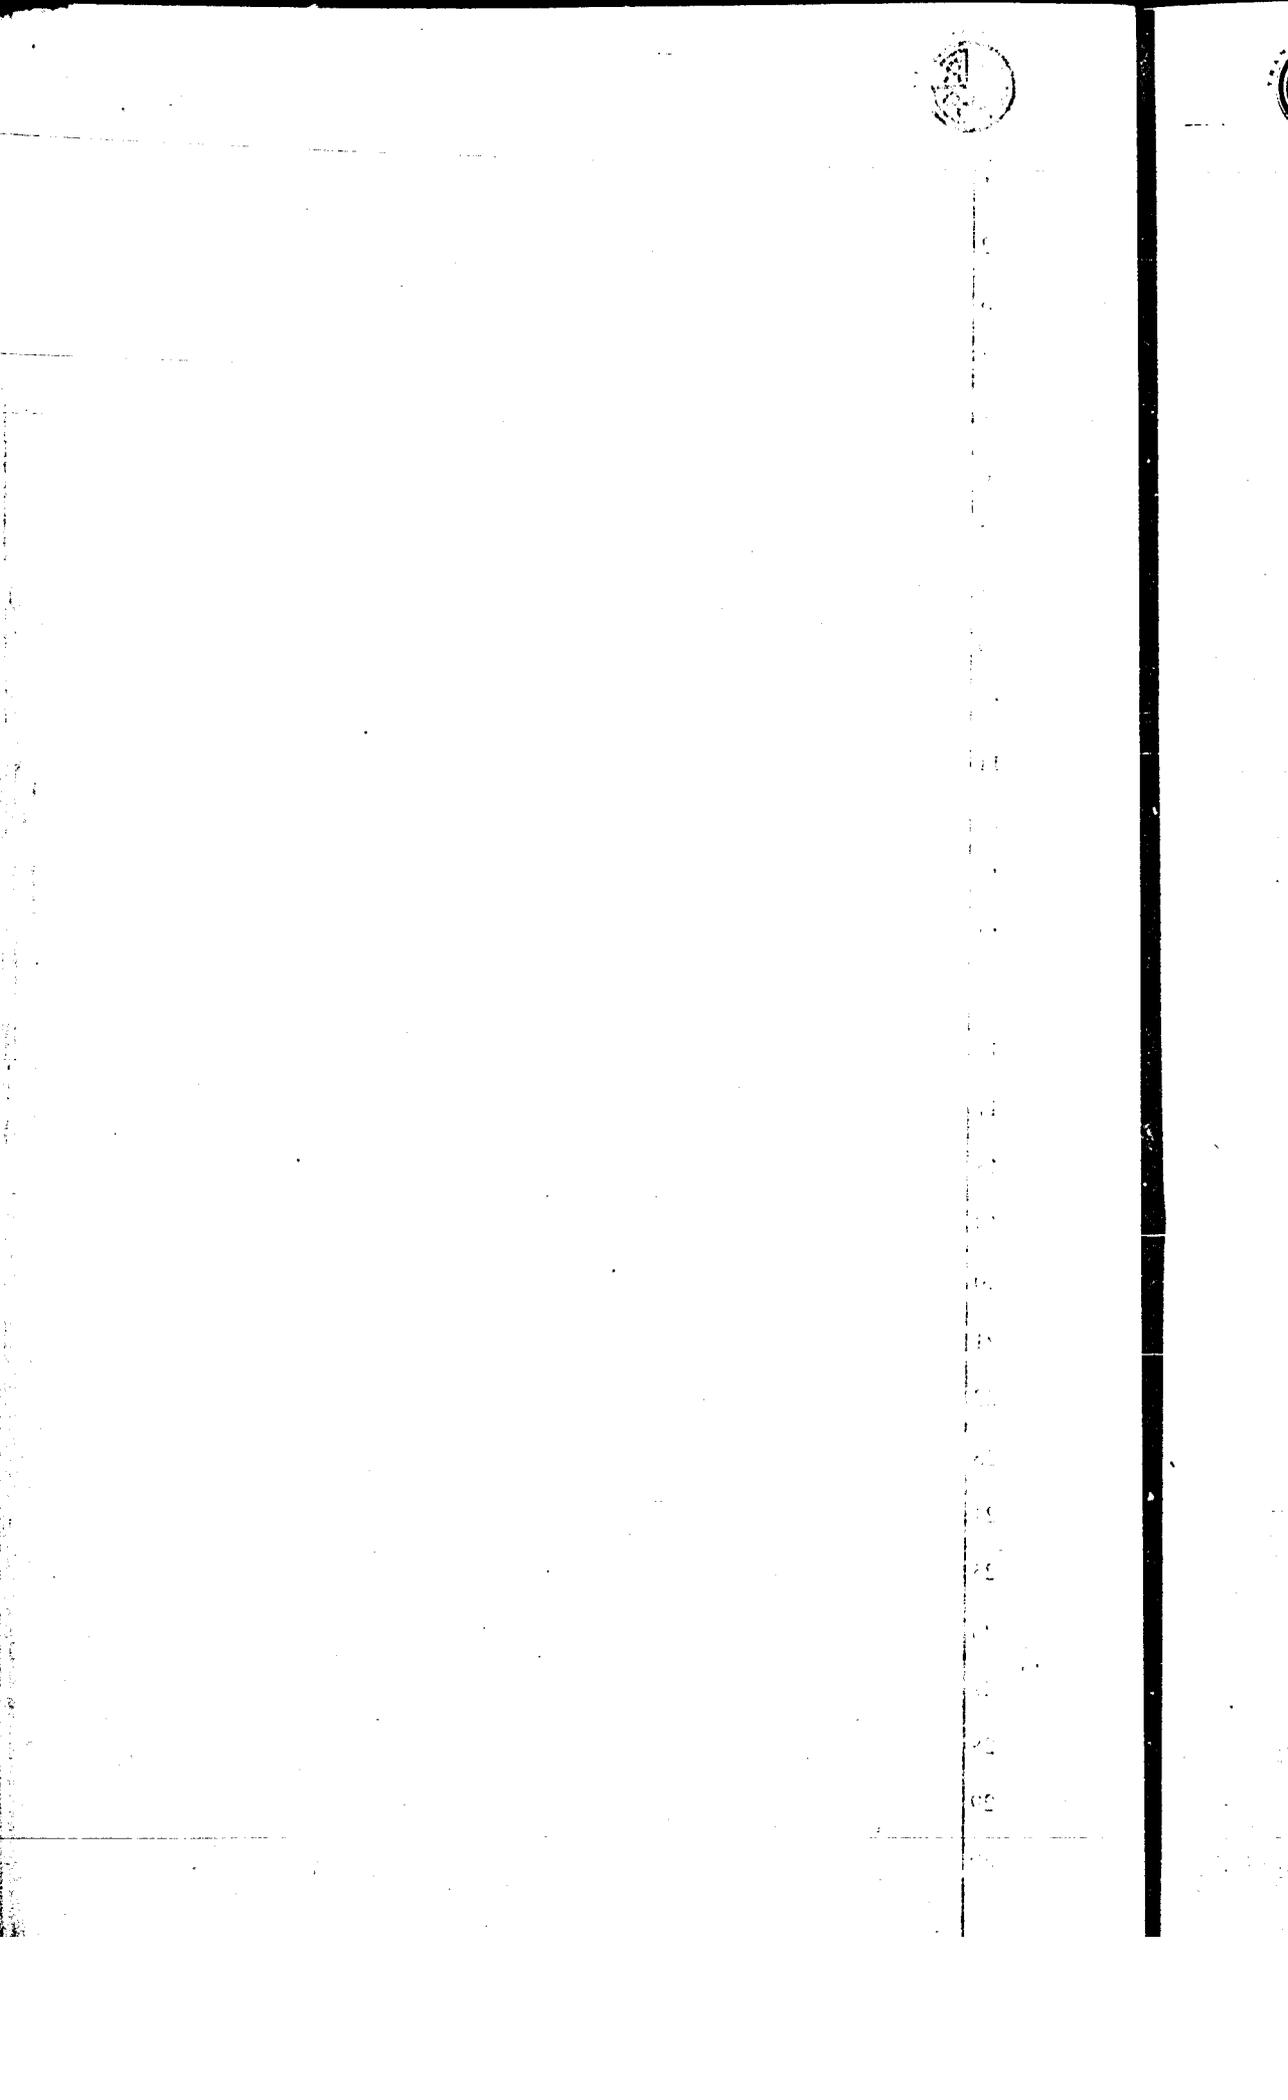

8

1 locations in Canada where they got a chance to more  
2 or less generalize. Others went into jobs where they  
3 had to specialize. Therefore, I am quite sure I agree  
4 with Major Tilden when he says some of them reached  
5 the very top grading in so far as motor mechanics  
6 were concerned, while others did not, they were  
7 specialists, and very excellent specialists, too;  
8 but, after all, they were not what you might call all-  
9 round motor mechanics.

10 Now, these chaps who came overseas from the Trades  
11 Training Schools did good work. As you know, in our  
12 organization we had a different set-up there, with four  
13 lines of repair. The mechanic in the first line of  
14 repair did not have an opportunity to do much  
15 more than what you would call a tune-up job -- quick  
16 testing and minor adjusting. In the second line they  
17 specialized in respect to the changing of assemblies.  
18 When you got to the third line and the fourth line,  
19 you had not only the specialist there but you had  
20 chaps who were capable of doing generally all kinds  
21 of work; and I think that the officers in the shops  
22 would agree that they had to be good mechanics on what  
23 you might call all-round jobs. Naturally they picked  
24 up the man who came into the Army with previous ex-  
25 perience for that kind of work; and it did not take an  
26 officer long to make up his mind whether a mechanic  
27 was capable of doing an overall job. That is the  
28 picture up to that point.

29 Now, regarding his competency certificate based  
30 on his trade rating in the Army on coming back to  
civilian life: I hesitate to say that there should  
be a trade test set up to measure that man's ability,  
for the reason that we found in the Army a great  
many excellent mechanics who found it difficult,

1 when it came to answering questions orally, to say  
2 just what they meant. However, when it came to doing  
3 a job with their hands, they could do it and do it  
4 well. Therefore, I confess, I feel that that type of  
5 man could only be assessed as to his technical ability  
6 by putting him on a job and having the employer  
7 measure his skill and pay him accordingly.

8 (f) By Major S. F. Tilden, R.C.M.E., now re-established  
9 in his own business, Tilden Drive-Ur-Self Company,  
10 Montreal, as follows: -

11 (Reference: Report No. 84, Vol. K, page 113).

12 "Q. by Major Capes: Major Tilden, you have had  
13 experience with trade testing in Canada, and with the  
14 various qualifications of the motor mechanics and  
15 allied trades. Would you care to express any opinion  
16 as to the value of these in relation to civilian re-  
17 quirements?

18 A. I think my ideas follow those of Major  
19 Campbell pretty closely. We give a certain amount  
20 of credence to these qualifications, but we definitely  
21 check a man in our own employ, and we would be guided  
22 by what he could do for us. I like Major Campbell's  
23 point that a great deal has to do with a man's person-  
24 ality; how much work he can produce, his interest  
25 in his work. That is very pertinent. And concerning  
26 the man who comes out of the army as a qualified motor  
27 mech., we take him on and try him out and if he does  
28 not measure up to our standard or if he is not interest-  
29 ed in his work we give up our experiment with him.

30 Q. In relation to the Army Trade Test, would  
you say that if a man were properly qualified and class-  
ified a grade A or B mechanic, that he would be  
equal to a pre-war mechanic as we know it in the  
trade?

The page is mostly blank with some faint, illegible markings and a vertical line on the right side. There are some small dark spots and a horizontal line near the bottom center.

1           A. I do not think you can generalize on it. I  
2 think you have to take the individual man. I have  
3 seen some men who qualified in the Army and went in  
4 as driver-mechanics and came out as motor mechanics  
5 and on the job they could do the work immediately.  
6 I have seen other cases where the reverse would  
7 apply. I may say frankly that we have many men who  
8 have come out of the Army qualified as motor mechanics  
9 when they were not, could not properly be designated  
10 as motor mechanics; I think that the people who  
11 qualified them as such in some cases knew it. I  
12 think that I was one of them. We had men who were  
13 specialized, but they were not fully qualified. One  
14 might be a good brake lining man who had worked on  
15 brake lining almost exclusively -- he might be a  
16 very excellent brake lining man -- but aside from  
17 that he might have nothing but a little theory as  
18 to any other part of the trade. One of the weak-  
19 nesses of His Majesty's set-up is that establish-  
20 ments are limited as to trade categories. They  
21 had no trade categories for specialists of the type  
22 I just described and there was no way by which such  
23 a man could get the trades pay to which he was pro-  
24 perly entitled on the basis of the value of his work,  
25 so we would classify him as a motor mech. because we  
26 felt his work justified the classification, as  
27 recognition, although we knew he was not a thoroughly  
28 qualified motor mechanic. We recognized that he  
29 was doing a good job turning out work that was badly  
30 needed. They had nothing in the Army that would  
31 permit a specialist to get trades pay."

32           The foregoing remarks, in principle, apply also to  
33 the R.C.A.F. classifications of aero-engine mechanics  
34 in that by virtue of their specialized training they

1 should have a marked degree of skill and knowledge in  
2 relation to engines. They are, however, deficient  
3 in the knowledge and skill pertaining to the power  
4 train in vehicle construction.

5 There is also the Air Frame mechanic who while  
6 he might receive a very elementary course on aircraft  
7 engines was trained in allied trades applicable to  
8 the automotive industry, viz., sheet metal work or  
9 body repairs, fabric worker or upholsterer, painter  
10 and such specialized work as hydraulic brakes. His  
11 responsibility in the maintenance and repair of the  
12 complete aircraft, excluding the motor, taught him  
13 craftsmanship which with further suitable training  
14 should make him useful in some phase of the motor trade.

15 A further classification existing in both the  
16 Canadian Army and the R.C.A.F. is that of tractor  
17 operator. These tradesmen are trained in the operation  
18 of tractors and in varying degrees in the skills re-  
19 quired to maintain this equipment in operation. Many  
20 veterans of this calibre will find employment operat-  
21 ing tractors in construction work, logging, air drome  
22 construction, road work, railway construction farm  
23 work, etc. In the case of the R.C.A.F., most per-  
24 sonnel were enlisted as experienced tractor operators.  
25 It is, therefore, not considered that these men will  
26 constitute any problem in the rehabilitation scheme.  
27 With the Army the situation was slightly different  
28 and it may, therefore, be assumed that further training  
29 from a maintenance standpoint (not operational) may be  
30 necessary before these veterans can be qualified to  
take their place in civilian organizations.

(8) EMPLOYERS' KNOWLEDGE OF SERVICE TRAINING AND SKILLS

The evidence submitted by employers clearly  
indicates a lack of knowledge of Armed Service training

Vertical text or markings along the right edge of the page, possibly a page number or index.

1 and skills.

2 A veteran's trade qualifications as set forward  
3 in his document indicates nothing whatsoever to the  
4 prospective employer.

5 The three publications, -"Naval Rates", "Army  
6 Employment -Civilian Jobs", and "Employers' Guide"  
7 were, generally, never seen by the majority of employers  
8 appearing before the Commission. In a few cases the  
9 "Employers' Guide" had been received but was not con-  
10 sidered of any particular value. This subject is  
11 dealt with more fully in Subsection III of this report.

12 A consolidated report of a questionnaire which was  
13 completed by seven firms in Montreal is attached to  
14 this Subsection. This questionnaire gives a good  
15 cross section of the information concerning the know-  
16 ledge and use of the above mentioned publications.

### 17 (3) TRADE ORGANIZATIONS - EMPLOYMENT

18 The organizations in which the largest number of  
19 veteran mechanics in the automotive and allied trades  
20 will find employment are:

- 21 (a) Automotive dealers - service and maintenance  
22 departments.
- 23 (b) Large and small general garages.
- 24 (c) Municipal tramways operating city bus lines.
- 25 (d) Interprovincial bus lines operating passenger  
26 road transportation.
- 27 (e) Large truck transport companies.
- 28 (f) Large truck and commercial organizations,  
29 operating fleets of trucks.

30 All these fields appear to offer excellent  
opportunities for employment at this time. In fact  
from the evidence obtained by the Commission within  
the territory covered, that is, Montreal, Quebec,  
Sherbrooke, etc., there appears to be an immediate  
dearth of skilled mechanics, and in Toronto, Ontario,

30

1 where a quick review was made (see Vol. K-83 of  
2 evidence), no evidence could be found of any veteran  
3 automotive mechanic being unemployed, and no difficulty  
4 had been experienced by Department of Veterans  
5 Affairs or Canadian Vocational Training in placing  
6 such personnel. A general idea of this position is  
7 set forth in the consolidated questionnaire above  
8 mentioned.

9 A question has arisen in the minds of the Commission  
10 as to where the many thousands of mechanics in their  
11 various gradings which are known to have been trained  
12 by the Army have become dispersed. It is not known  
13 how many of these personnel are still retained in  
14 the Armed Forces but it is assumed that large numbers  
15 have already been demobilized. As previously stated,  
16 the pre-war mechanic does not appear to constitute  
17 any problem inasmuch as he has been quickly absorb-  
18 ed by industry. It has been said that many of the  
19 in-service trained mechanics who had no prior  
20 experience have not elected to follow this trade but  
21 have returned to the farms and other jobs in industry  
22 or are taking training in entirely different fields  
23 of endeavour. This point has, as yet, not been  
24 clarified to the satisfaction of the Commission.

25 From the information obtained, the present  
26 position of the maintenance and repair section of the  
27 automotive industry (not factory production) would  
28 indicate that there will be a steady demand for skill-  
29 ed mechanics for some little time. However, employers  
30 generally are critical of the service trained veteran  
for the reasons set forth in the foregoing paragraphs.  
This is strictly in relation to their skill and  
knowledge and to some extent to the speed at which  
they work, since most operations in the maintenance and

7

1 repair of civilian vehicles are done on the flat  
2 rate system wherein time is of paramount importance.  
3 The demands of the industry at this time are for  
4 mechanics with all-round skill and knowledge. This  
5 applies generally to the dealer and garage business.  
6 There are a few exceptions where specialists may be  
7 employed in organizations such as the Montreal Tram-  
8 ways, Provincial Transport Company and a limited  
9 number of motor dealers where the volume of business  
10 is sufficiently large to operate on production line  
11 methods in over-haul work. In these organizations it  
12 has been found that the service trained specialists  
13 have been eminently satisfactory. The following is  
14 an extract from the evidence submitted by the re-  
15 presentative of the Provincial Transport Company,  
16 Montreal:-

(Reference: Report No. 78, Vol. K, page B115)

17 "Q. Have you had experience with mechanics  
18 coming back from the Armed Service?

19 "A. Yes, I have.

20 "Q. What have you to say about them?

21 "A. Well, our experience has been pretty  
22 good. Due to the size of our shops, these chaps  
23 coming to us are for the most part specialists  
24 and we can place them in special shops on our  
25 production line which is very valuable to us  
26 in that way.

27 "Q. And have you been able to find men who  
28 have done special jobs in the Armed Services  
29 which would enable you to place them in a  
30 corresponding position in your own line?

"A. Yes, we have. We have liked them for  
that reason. They have been selected as trades-  
men, experts on steering, or whatever it may be,

39  
40

1 and we have taken them on and employed them  
2 on that type of work."

3 There is also a limited demand for specialists  
4 in automotive electrical work. However, in this case  
5 it is evident that the service trained specialist  
6 has insufficient experience or knowledge to cope with  
7 civilian requirements without further training.

8 There is little immediate demand in the trade  
9 for apprentices although many have been placed for  
10 training on the job. (This subject will be enlarged  
upon later in this report.)

11 In-service trained mechanics may be summarized  
12 as follows:-

- 13 1. Technical knowledge - fair to good.
- 14 2. Practical all-round experience - not good.
- 15 3. Practical specialized knowledge, skill  
and experience - good to excellent.

16 (4) EMPLOYER AND EXAMINING BOARD REPORTS ON VETERANS'  
17 QUALIFICATIONS.

18 While much has been found lacking with the in-  
19 service trained veteran, from the standpoint of skills  
20 and knowledge for civilian requirements, many favour-  
21 able qualities have been unanimously endorsed and  
22 may be attributable to the service training in its  
23 over all application. The factors of discipline,  
24 interest, general deportment and morale are consid-  
25 ered to be excellent. Willingness to work and appli-  
26 cation to job, excellent. Instability negligible  
27 (See Subsection VI). It is further the consensus of  
28 opinion that the pre-war mechanic carrying on his  
29 trade in the Armed Services has been materially im-  
30 proved by his service experience. From this evidence  
it is the opinion of the Commission that there exists  
a great deal of partially skilled material, trained at

30

1 a heavy cost to the country, which should not be lost  
2 through any inability to complete this training to the  
3 point where it can be fully utilized in civilian  
4 requirements and thus become an asset to the national  
5 economy.

6 It is the recommendation of the employers  
7 generally, based upon the employment of and actual  
8 experience with veterans, that

9 (a) Veteran pre-war mechanics be immediately  
10 placed in a job since a short practical re-  
11 habilitation period, on the job, is all that  
12 is required. In this connection it has already  
13 been stated that this class of mechanic or  
14 tradesmen does not constitute any problem in  
15 re-employment.

16 (b) Veteran in-service trained mechanics be  
17 placed for practical on the job training  
18 necessary to attain journeyman's status for  
19 the period varying with individual ability  
20 and previous practical experience, as no  
21 further theoretical training is required.

22 (c) Veteran untrained, be given a short  
23 theoretical and practical course, the equivalent  
24 of service basic training, automotive or  
25 technical school, followed by training on the  
26 job.

27 Note: (c) This should be tied in with a period  
28 of apprenticeship which will be  
29 enlarged upon later in this report.

30 (5) UNIONS, COLLECTIVE LABOUR AGREEMENTS AND PARITY  
COMMITTEES.

In so far as unions are concerned with the  
automotive trades, whatever organization has taken  
place, in some districts, they have not acquired any

Vertical text or markings along the right edge of the page, possibly a page number or index.

Vertical text or markings along the right edge of the adjacent page, possibly a page number or index.

1 strength or general membership. The automotive trade  
2 in Quebec is covered by collective labour agreements.  
3 These labour agreements are operated by Parity  
4 Committees whose membership is composed of employers  
5 and employees. These committees carry out the  
6 regulations as laid down by Provincial Order-in-  
7 Council. The powers and functions of these Parity  
8 committees are set forth in a brief submitted to the  
9 Commission by the secretary of the Board of Examiners  
10 of the Parity Committee of Automotive Industries  
11 of Montreal and District, and reads as follows:

11 "TRANSLATION"

12 MEMORANDUM ON THE ISSUANCE OF COMPETENCY  
13 CARDS BY THE PARITY COMMITTEE OF THE  
14 AUTOMOBILE INDUSTRY OF MONTREAL AND DISTRICT.

15 "Gentlemen:

16 (I) Further to your request at the session of  
17 the 17th of January, I have the honour to submit my  
18 memorandum on the issuance of Competency Cards made  
19 compulsory by Collective Bargaining Agreement of the  
20 Automobile industry and the regulation adopted by  
21 the Parity Committee, sanctioned by Order-in-Council  
22 and published in the Quebec Official Gazette on  
23 November 3rd, 1941.

24 (II) My report will govern the functions of the  
25 Parity Committee concerning the issuing of Competency  
26 Cards.

27 (III) The Collective Agreement Act was borrowed  
28 from European labour legislation in 1934, and has  
29 for its purpose the aiding of negotiations between  
30 employers and employees in order to arrive to an  
agreement on the minimum wages paid to employees in  
some trades and in the same industry. It has been  
amended from year to year and it is now found in  
Chapter 168 of the Revised Statutes of Quebec for the  
year 1941.

1 (IV) This legislation has been considered  
2 up to now as constituting a marked progress in Labour  
3 legislations to a point that other provinces have  
4 adopted law permitting the carrying out of what is  
5 called Collective Bargaining.

6 (V) However, the characteristic of the Quebec  
7 law is that the will of the majority makes contract  
8 obligatory for all those belonging to the industry  
9 and to the trades governed by the Contract.

10 (VI) For the purpose of bringing to an end  
11 the situation that imperils the interest of employers  
12 and employees in the automobile industry, they have  
13 in November 1937, negotiated a Labour Agreement  
14 which became compulsory on the 13th of May 1938,  
15 by Order-in-Council No. 764, duly approved by the  
16 Lt.-Governor in Council and published in the Quebec  
17 Official Gazette. Further in carrying out this  
18 order, the automobile industry did but follow the  
19 example of the majorities of industries in Quebec  
20 and if one refers to the federal statistics over  
21 the last years and particularly in 1944-1945, one  
22 will see that the number of labourers difficulties  
23 in the Province of Quebec is lower than that of the  
24 other provinces, and this, we humbly submit is no  
25 unusual to our Labour legislation in general and to  
26 the Collective Agreement Act in particular.

27 (VII) May it be permitted to me to give certain  
28 details on the formation of the Parity Committee  
29 of Automobile Industry in Montreal and District, its  
30 rights and obligations.

(VIII) From the moment that a decree or Labour  
Agreement for a trade or industry becomes compulsory  
the contracting parties delegate one or more re-  
presentatives to the Parity Committee, while the

1 non-contracting parties may refer to the Minister  
2 of Labour at Quebec for representation. The Minister  
3 of Labour may then name four (4) representatives  
4 equally divided amongst employers and employees so  
5 that at all times they are in equal number to protect  
6 their respective interest.

7 (IX) Regulations are then prepared and are  
8 approved by the Lt.-Governor in Council and published  
9 in the Quebec Official Gazette. From this moment on  
10 the Parity Committee becomes a Corporation.

11 (X) Article 20 of the Collective Agreement  
12 Act and its sub-paragraphs set out the rights and  
13 obligations of the Parity Committee. The point that  
14 interests particularly your Commission is the  
15 chapter that deals with the classifications of wages,  
16 that is found in the Articles 25 to 37 inclusive  
17 of the Act. This chapter stipulates that the  
18 Committee may by rule make compulsory a Competency  
19 Certificate for all wages subject to the decree in  
20 all or in part of the territory under its jurisdiction  
21 in this district.

22 (XI) A rule to this effect must be prepared  
23 and submitted to the approval of the Lt. Governor  
24 in Council, who will grant it only when he sees it  
25 to be to the interest of the industry in general  
26 and publishes it in the Quebec Official Gazette if  
27 it has been duly sanctioned.

28 (XII) The Parity Committee has issued Competency  
29 Certificates to wagers who want them from the 13th  
30 of May 1938 to the 1st of August 1939, without, how-  
ever, these Certificates being compulsory. On the  
26th of July 1939, by Order-in-Council No. 1536,  
the Competency Certificate became compulsory for the  
trade of mechanics, machinists and electricians in

1 all cities and municipalities of over 5,000 inhabit-  
2 ants situated within the limit of the territory under  
3 the jurisdiction of the decree.

4 (XIII) By Order-in-Council No. 2628 dated  
5 November 25th, 1939, the Competency Certificate be-  
6 came compulsory for all trades in the automobile  
7 industry in Montreal and District. Finally, the  
8 rule was again sanctioned on the occasion of the  
9 modification of the Collective Labour Agreement by  
10 Order-in-Council No. 2914, on the 3rd of November  
11 1941, and has since remained compulsory on the  
12 occasion of each extension of the Collective Agreement.

13 (XIV) This Competency Certificate is now con-  
14 sidered by the majority of employers as the only  
15 standard permitting them to evaluate the quality of  
16 an employee. Considering the compulsory characteristic  
17 of the Act, it is not permitted to an employee to  
18 practice a trade in the automobile industry without  
19 holding a Competency Card nor is it permitted to an  
20 employer to engage such employee who do not hold such  
21 Competency Card.

22 (XV) I will now try to set out, as briefly  
23 as possible, the procedure followed in the issuance  
24 of Competency Certificates.

25 (XVI) Every employee desirous of obtaining  
26 work in the automobile industry may present himself  
27 between 9.00 a.m. and 6.00 p.m. at the office of the  
28 Parity Committee to fill out the form, copy of which  
29 is attached hereto as Appendix V.

30 (XVII) Any apprentice who has not reached the  
age of 16 years or has not completed his 5th year of  
preliminary schooling is eliminated according to the  
rules of the Labour Agreement, Article VI, para. "e",  
which reads as follows:

1 "No apprentice may be accepted before  
2 the age of 16 years. He must have  
3 completed at least his 5th year of  
4 elementary schooling."

5 I refer you to the Labour Agreement hereto  
6 annexed as Appendix VI.

7 (XVIII) It is fitting to point out here under  
8 the terms of Article 11 of the Collective Agreement  
9 Act, also annexed as Appendix VII, that the dis-  
10 positions of Labour Agreement are of public order.

11 (XIX) At this first interview, the candidate  
12 fills in the application form for Competency Cert-  
13 ificate and if the request concerns the trade of  
14 mechanic, machinist or electrician, he immediately  
15 undergoes a brief examination for aptitude and  
16 orientation in the course of which elementary questions  
17 are put to him.

18 (XX) The candidate for one of the trades  
19 of mechanic, machinist or electrician in the auto-  
20 mobile industry who passes successfully this pre-  
21 liminary examination and whose experience in the  
22 trade is less than three (3) months is immediately given  
23 a 4th class Apprentice Certificate and in the case  
24 his experience is greater than three (3) months, con-  
25 sidering the circumstances, a 3rd class Apprentice  
26 Card is given to him if he so desires it.

27 (XXI) — Otherwise he is called in with the  
28 others to undergo examination at the next sitting,  
29 according to priority of submission of his application.  
30 A copy of the notice of convocation is annexed hereto  
as Appendix VII (a).

(XXII) The Board of Examiners is made up  
of employers and employees in equal number and the  
President of the Parity Committee is as member ex-  
officio.

Vertical text or markings along the right edge of the page, possibly a page number or reference code.

1 (XXIII) It is to be noted that these members  
2 have considerable experience in the automobile in-  
3 dustry, varying from 15 to 28 years.

4 (XXIV) The examinations are held between  
5 8.00 p.m. and 11.00 p.m. since the examiners are all  
6 occupied in the trade during the day. We have also  
7 fixed this period for examinations in order to avoid  
8 loss of time for the candidate who may be employed  
9 in another industry during the day. We believe that  
10 in so doing, we have answered the wish of all con-  
11 cerned.

12 (XXV) As the candidates present themselves,  
13 they register and deposit the examination fees, all  
14 in conformity with Article 28 of the Collective Agree-  
15 ment Act already annexed as Appendix VII. The  
16 candidate is first of all sworn in on the declarations  
17 contained in his application, if such has not already  
18 been done and the Secretary asked certain questions  
19 pertaining to his declaration for the purpose of  
20 putting him at ease and doing away with the first  
21 period of nervousness, in order that the candidate  
22 may be better disposed to answer the questions that  
23 will then be put before him and on which alone  
24 depends the issuance of a Competency Certificate.

25 (XXVI) The series of questions ordinarily  
26 asked are made up as follows:

- 27 Three (3) questions concerning motor;
- 28 One (1) question concerning electrical system;
- 29 One (1) question concerning the brake system;
- 30 One (1) question concerning carburation; and the  
Seventh question on other parts or accessories  
of the automobile.

(XXVII) It is to be noted that all these  
questions concern daily problems in the automobile  
industry, with the exception of one, which is of  
purely technical nature.

1 (XXIII) The questions are asked by the Sec-  
2 retary in French or English according to the wish of  
3 the candidate, and in every case, in a language that  
4 the candidate understands perfectly.

5 (XXIX) It often happens that after putting  
6 questions to the candidate, the Secretary asked if  
7 he understood, and if need be, will give him further  
8 details in order that better answers are given, and  
9 further still, will allow him to use parts of an  
10 automobile in order to clarify questions he answers.  
11 The candidate also is guided by the Secretary if it  
12 appears that he is getting away from the question.

13 (XXX) The questions are asked following a  
14 numbered questionnaire approved by the Board of Ex-  
15 aminers; the Secretary annotates the candidate's  
16 file with the number of each of the questions which  
17 he has asked and the Examiners appreciate separately  
18 the value of the answers of the candidate and make  
19 notation accordingly. Competency Card is then issued  
20 to the candidate following deliberation of the members  
21 of the Committee on the results of his examination;

22 (XXXI) These files are then deposited in the  
23 archives for further references.

24 (XXXII) It often happens that through nervous-  
25 ness, shyness, domestic problems, etc., the candidate  
26 seems to be in such condition that the oral exam-  
27 ination cannot do full justice. The members of the  
28 Board of Examiners then suggest a practical examin-  
29 ation. In this case, the examination takes place  
30 in a garage chosen by the candidate, and the class-  
ification is made following the written report of the  
Examiners who followed the practical examination,  
which report is submitted and is adopted at the  
subsequent meeting of the Board.

Vertical text or markings along the right edge of the page, possibly a page number or reference code.

1 (XXXIII) The candidate who does not feel that  
2 he obtained the anticipated result has the same right  
3 to a practical examination according to the rules  
4 adopted by the Parity Committee, and at his own re-  
5 quest, the whole subject to the conditions set out  
6 above.

7 (XXXIV) The Competency Card remains in force  
8 as long as it is not changed following a subsequent  
9 examination whatever be the period elapsed since its  
10 issuance.

11 (XXXV) Further any candidates who desire to  
12 improve their position may submit a request in writ-  
13 ing following the procedure set out above, every six  
14 (6) months, except in the case of veterans, where  
15 the delay has been reduced to three (3) months.

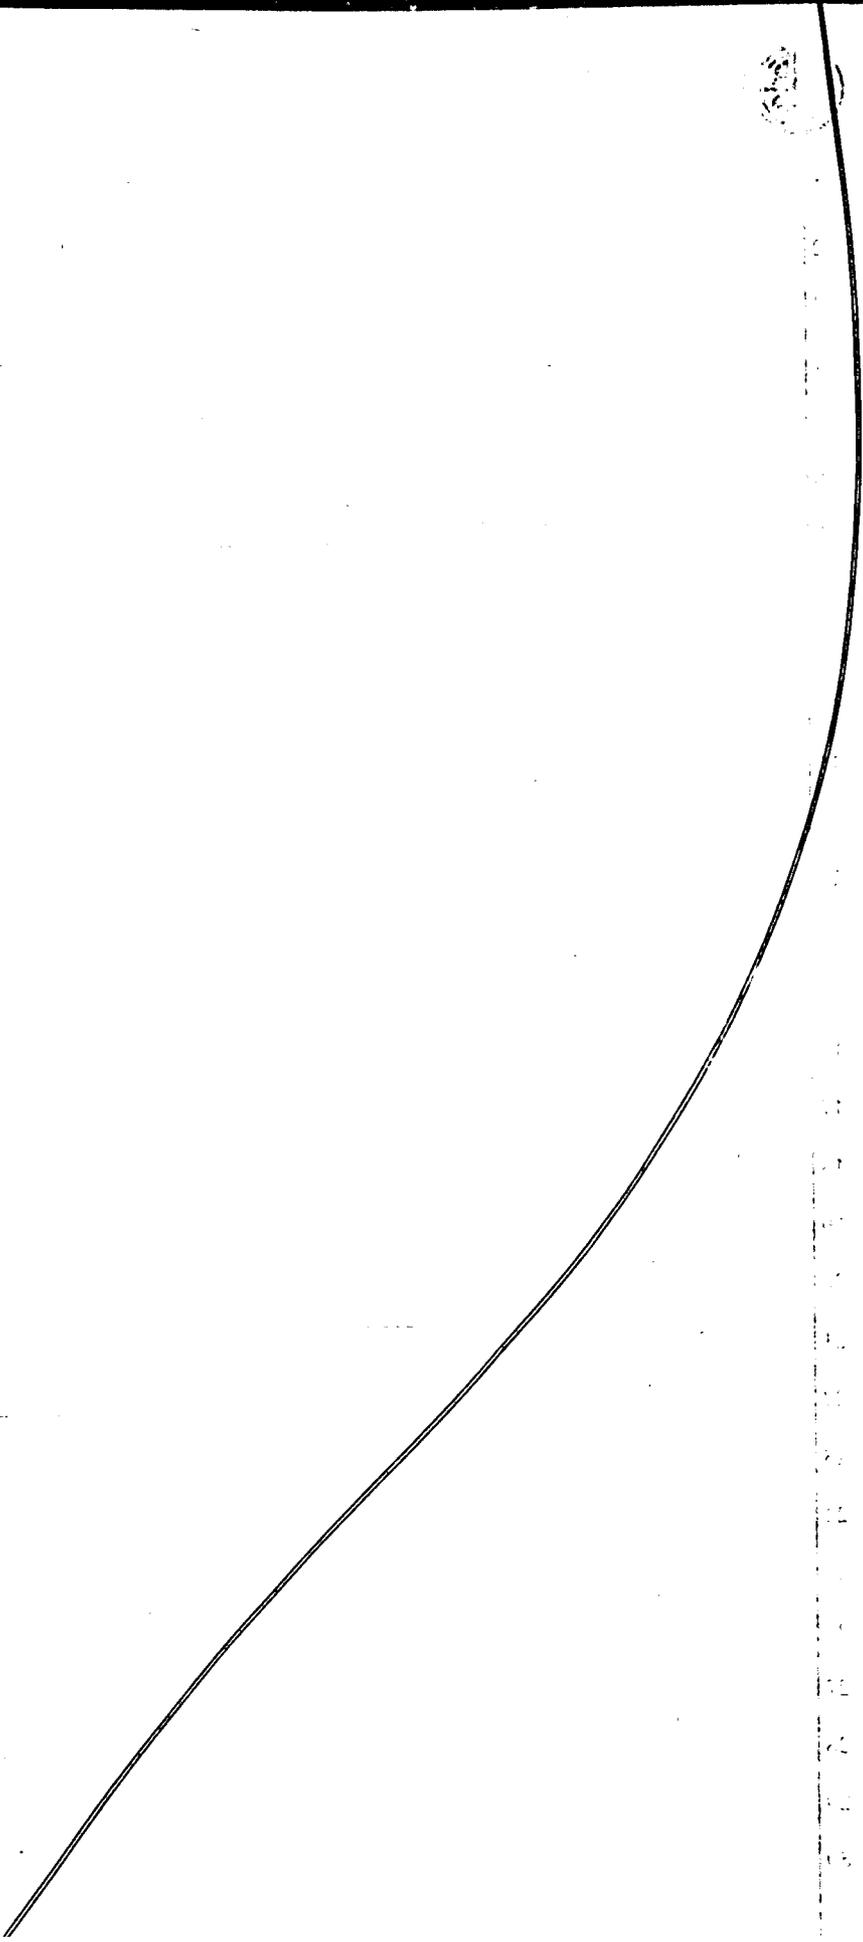

16 (XXXVI) I hope that this memorandum will give  
17 you all the useful details for the purpose of your  
18 enquiry concerning the issuance of Competency Cards.

19 Please accept the expression of my most  
20 distinguished sentiments.

21 (Signed) ARTHUR PRIEUR

22 Secretary of the Board of Examiners  
23 of Parity Committee of Automobile  
24 Industry in Montreal and District."  
25 January 17th, 1946.

26 It will be noted that according to paragraph XIV  
27 of the foregoing submission, it is not permissible to  
28 practice an automotive trade or to engage mechanics  
29 in that trade without a competency certificate. These  
30 competency cards are issued under seven different  
classifications, for automotive mechanic, class 1, 2  
or 3, (class 1 being the full fledged journeyman  
status), - for apprentices 1st, 2nd 3rd or 4th year.  
This covers a fine line of demarcation of skill and  
knowledge and since there is no laid down civilian

1 standard of general application in the trade upon which  
2 to formulate these gradings, it becomes a matter of the  
3 evaluation of a man's ability upon the opinion of the  
4 personnel of the particular Parity Committee to whom  
5 he applies, and since these conditions pertain to all  
6 the various Parity Committees throughout the Province,  
7 a man might be assessed as a grade 1 mechanic by a  
8 committee in Quebec City but in the city of Montreal  
9 would not be assessed higher than a class 3 mechanic or  
10 possibly 4th year apprentice. Such discrepancies  
11 give serious grounds for complaint. The lack of  
12 standards and the non-acceptance of a competency card  
13 from one district to another district is highly  
14 detrimental to the whole situation.

15 It will be noted that the issuance of a competency  
16 certificate whether it be apprentice or mechanic's  
17 class does not call for any further responsibility on  
18 the part of the Parity Committee in relation to the  
19 progress of the apprentice or the mechanic, if he should  
20 fail to qualify as a full journeyman at the time of  
21 his examination.

22 The candidate may as set forth in paragraph XXXIV  
23 submit a request in writing to be further examined at  
24 a later date. It would appear from the evidence sub-  
25 mitted that this is either not understood or more  
26 or less ignored for the reason that these competency  
27 cards do not appear to bear any relation to the  
28 actual earning capacity of the holder except to  
29 establish the absolute minimum at which he may be  
30 employed.

31 It will be noted that the examinations are  
32 primarily oral. The question of whether an oral test  
33 is fully satisfactory is not considered of particular  
34 importance at this time for the reason that there is

Vertical text or markings along the right edge of the page, possibly a page number or index.

Small mark or symbol on the right edge of the page.

1 no uniformity or standardization between the various  
2 areas governed by the different collective agreements  
3 in the method of assessing a veteran for his  
4 competency card. Employers are insistent on assess-  
5 ing the skill of any employees - veterans or otherwise -  
6 in accordance with their own evaluation and on that  
7 evaluation only they determine the maximum remuneration.  
8 This is borne out by the evidence submitted wherein  
9 a mechanic holding an apprenticeship card which called  
10 for a minimum of 50 cents an hour is now being paid  
11 80 cents an hour by an employer who is well satisfied  
12 that he is worth the money.

13 The evidence in general reduces the entire  
14 competency card question to one of

15 (a) Acceptance of classification by employers  
16 for minimum wage scale but maximum re-  
17 muneration not governed by such class-  
18 ification;

19 (b) Employers' insistence on assessing skill of  
20 employees and determining maximum re-  
21 muneration accordingly, irrespective of  
22 competency card classification.

23 It was found in the City of Quebec that the  
24 procedure as followed was for a mechanic, veteran or  
25 civilian, to first of all get himself a job and after  
26 a reasonable trial period, to have the employer notify  
27 the parity committee as to the applicant's skill.  
28 The Parity Committee would then issue a competency  
29 card on the strength of the employer's recommendation.  
30 This method again places the evaluation of the mechan-  
ic's skill on the personal opinion of that employer,  
his service manager or foreman. It was found in the  
city of Montreal that while the practice as laid down  
by the Parity Committee was more closely adhered to,

1 many mechanics had obtained employment before acquir-  
2 ing competency certificates and that employers had  
3 in many cases recommended to the Parity Committee  
4 a classification on the basis of their assessment of  
5 such individual's skills.

6 A candidate who feels that he has not been  
7 reasonably assessed by the oral examination may demand  
8 a practical test. This point, however, does not  
9 appear to carry much weight for the reasons already  
10 stated. The employer will ultimately determine the  
11 maximum wage regardless of the competency card and  
12 in that case the competency card, irrespective of  
13 grading only serves to comply with the law. The  
14 method of examination does not determine the specific  
15 or specialized skills which a veteran may have acquired  
16 in the service and no mention is made on the competency  
17 card of these particular qualifications. It has been  
18 suggested that such information might be inserted  
19 on the veteran's certificate of qualifications as  
20 provided by the services on demobilization, since  
21 there are occasions where these specialized skills  
22 can be utilized at maximum rates of pay.

23 It has been found that the Parity Committees  
24 ignore the service trade certificate issued to the  
25 veteran on discharge. The fact that the Parity  
26 Committee competency card may not grade a veteran in  
27 accordance with his present abilities appears to be  
28 no detriment under the existing conditions where the  
29 demand for automotive mechanics is clearly in excess  
30 of the available supply. However, a different situation  
would be created if the supply was in excess of the  
demand, which would occur in the case of a trade  
depression. These circumstances would undoubtedly con-  
cern the employer in relation to the scale of wages and

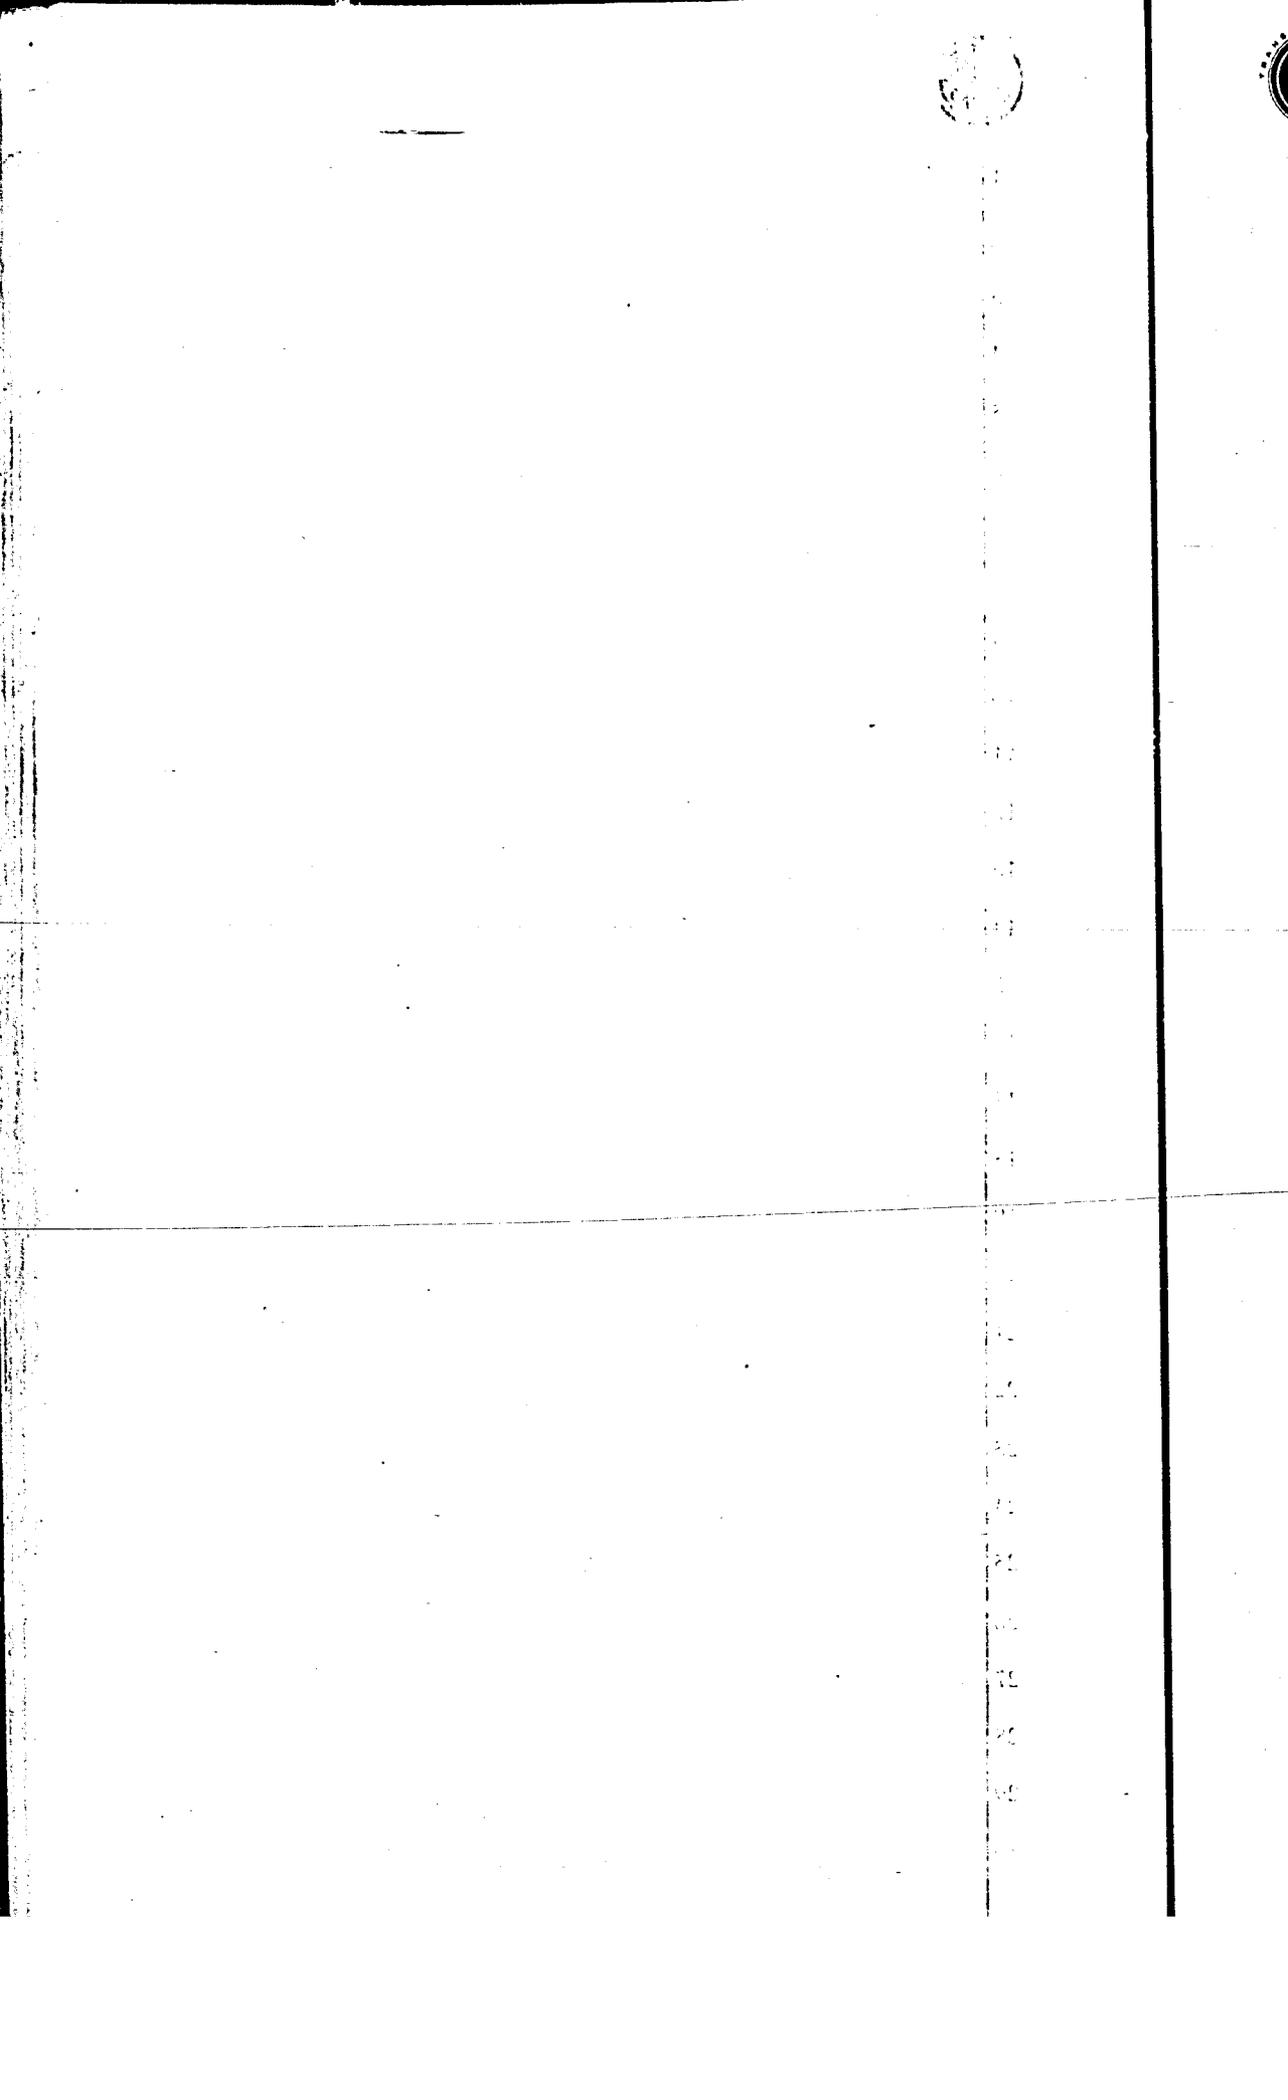

Vertical text or markings along the right edge of the page, possibly a page number or index.

1 the employer might be inclined to give more cogniz-  
2 ance to the competency card from the standpoint of  
3 minimum rates of pay. At the moment this possibility  
4 is remote because of a provision in the Collective  
5 Wage Agreement in effect in the district of Montreal,  
6 whereby an employer is forbidden to reduce the amount  
7 of wages attained by any individual. The amount of  
8 these wages is not necessarily governed by the minimum  
9 set forth in the Wage Agreement. However, there is  
10 no restriction on an employer discharging a highly paid  
11 mechanic and replacing him with one of equal skill in  
12 times of depression who would be willing to accept  
13 lower wages. The Commission is informed unofficially  
14 that the Collective Wage Agreement is in process of  
15 amendment for the District of Montreal so as to bring  
16 the minimum scale of wages set out therein more in  
17 keeping with the actual wages paid.

18 (6). STANDARDIZATION OF SKILLS.

19 In considering the question of standardization of  
20 skills in various trades, the Armed Services present  
21 an entirely different picture to that of civilian in-  
22 dustry. The Armed Services did set a standard of  
23 requirements in each of the trades employed. These  
24 standards were subdivided into the necessary skills  
25 required for each of the classifications under which  
26 the mechanic or tradesman qualified. Predicated upon  
27 these standards, it was possible to set up the neces-  
28 sary trade schools and courses and to assess the value  
29 of such courses in relation to the laid down require-  
30 ments. A counterpart in civilian industry does not  
exist, with the result that much confusion is evident  
in any attempt to assess the value of in-service train-  
ing skills in relation to civilian requirements. This  
situation was exemplified in a discussion covering

1 service trades at a sitting of the Commission in  
2 Montreal on May 24th, 1945. Mr. T. A. McMaster of  
3 the Canadian Legion Educational Services commented  
4 in relation to the discussion as follows:

5 (Reference: Report No. 6, Vol. II, page F-5, line 9)

6 "Now that I am here, if I may I should like  
7 to make one further observation. The more evidence  
8 that is brought forward the more uneasy I become as  
9 to the evaluation of much of this training. You ask  
10 me from time to time what value I would give a  
11 certain course. I can value that fairly well,  
12 because I know the academic curriculum across the  
13 country. But when you take such intensive training  
14 as we heard about this morning and ask the liaison  
15 officers to translate that into terms of second  
16 or third or fourth year apprenticeships, I must  
17 confess that I am absolutely up in the air.

18 "I have a feeling that whatever exists, as I  
19 said at noon, can be measured if it does exist.

20 We can measure something against a common standard.

21 We can measure army trades, air force trades and  
22 naval trades by means of the trade tests, but there  
23 is no available civilian equivalent, except that the  
24 man has done one or two years in the workshop. I  
25 have heard of a trade this afternoon where men would  
26 train for thirty-three weeks of intensive training,  
27 which they will never get in a workshop. Those chaps,  
28 instead of coming in as first or second year apprentices  
29 perhaps should come back as master mechanics. That  
30 is why I say if we could have some comparative  
civilian equivalent, I would be much happier in my  
own mind about evaluating these things".

It has already been pointed out in Paragraph 5  
that the method of assessing mechanics' skills by the

1 Parity Committees is based entirely upon the personal  
2 opinion of each individual Board of Examiners or upon  
3 the recommendation of the employer, neither of which  
4 has any standard of requirements for any part of the  
5 apprenticeship or qualifying period. It will be noted  
6 in connection with apprenticeships that while a period  
7 of five years has been established in the province of  
8 Ontario and suggested for Quebec Province there is no  
9 evidence that anything has been laid down as to what  
10 an apprentice should accomplish in any given part  
11 of the five-year period, nor is there any requirement  
12 that he submit to an examination to determine

- 13 (a) that the apprentice has acquired the  
14 proper degree of skill within a given  
15 period;
- 16 (b) that the employer has adequately trained  
17 the apprentice during such period.

18 P.C. 8993, paragraph 8, calls for a definite  
19 programme with provision for instruction in relation  
20 to technical subjects. Paragraph 10 calls for period-  
21 ic trade tests and a final trade examination prior  
22 to granting improver or journeyman status together  
23 with the issuance of a certificate or diploma. These  
24 requirements, both of which are basic and essential  
25 to the proper functioning of any training programme,  
26 are not being carried out and would be of little  
27 value if carried out under the present system due to  
28 the lack of an accepted standard of skills set up  
29 by the civilian trade or industry.

30 While many problems might confront the under-  
taking to standardize a syllabus of training for all  
the mechanical and electrical trades due to the  
variable requirements, it is felt that the automotive  
trades would be relatively easy of accomplishment

inasmuch as the method of repair of civilian standard cars and trucks is more or less uniform throughout the Dominion.

In this connection attention is drawn to the attempt being put forward by the Toronto Automobile Trade Association in Ontario to standardize a five year programme of training which will start with the 1st year apprentice and finish with a 5th year mechanic (fully qualified). Under this plan every worker in the trade could be examined and graded, on the standards of skills laid down, as a 1st, 2nd, 3rd, 4th, 5th year apprentice, or mechanic upon satisfactorily passing the final examinations.

In his evidence (Report K78-B118) Mr. Howard B. Moore, Managing Director of the Federation of Automobile Dealers Associations, submitted an article appearing in the May 1945 issue of the Trade Magazine "GARAGE OPERATORS" which reads as follows:

"COMMITTEE DEVELOPS CHART TO CHECK APPRENTICE PROGRESS.

"In the two pages immediately following we publish a new chart (entered at the end of this article) which has been prepared as a guide to the training and grading of apprentices in the motor vehicle repair trade. This is the first time this chart has been published in any form and we urge our readers to remove the pages from the book and post them in a place where they will be available for inspection.

"This chart was prepared by a sub-committee of the Provincial Advisory Committee on Apprenticeship and approved by the Committee as a whole. It is not considered a finished product but rather as

1 a start toward a development which seemed to  
2 be essential. At the same time the details  
3 have been well considered and it may be  
4 found entirely adequate without change.

5 "The production of this chart came about in a  
6 strange way. In setting up a rehabilitation plan  
7 for returned servicemen it was found that frequent  
8 reference was made to men of second year apprentice  
9 standing, third year and so on. Someone quite  
10 naturally asked how you determined whether or not  
11 a man had reached second, third or fourth year  
12 standard. Then it was realized that at no time  
13 since the advent of apprenticeship had any  
14 standard been established which could be used  
15 for this purpose.

16 "A careful consideration of the problem showed  
17 a most urgent need for some such standard to be  
18 produced at the earliest possible moment. For  
19 example, technical teachers have asked what we  
20 expect of their automotive pupils. Local advisory  
21 committees are without any standard means of  
22 measuring the progress of men they may be called  
23 or to consider and rate. Apprentices have had no  
24 way of knowing what they should be taught at given  
25 periods in their apprenticeship and service managers  
26 and employers have been equally in the dark.

27 "Now for a study of the chart itself so you  
28 may have a fuller idea of its real purpose. First  
29 you will notice that it is divided into six  
30 vertical columns, one listing the subjects to  
be covered and the others for the years, one to  
five. Next you will note the eleven horizontal  
divisions in which are developed the various  
subjects in logical progressive stages. The top

1 horizontal division covers theory to be studied  
2 in each year and recommends certain reference  
3 publications. This is intended as a guide to  
4 the type of reading recommended as it is realized  
5 there are many more excellent reference publications  
6 available than could possibly be listed in such  
7 a chart. The remaining horizontals cover ten  
8 broad sections of the automotive repair business.

9 "The thinking behind this plan is to the  
10 effect that the new apprentice should be taught  
11 to be useful and productive at the earliest possible  
12 stage in his career. Not only does this make him  
13 productive for his employer but it helps the  
14 apprentice by teaching him to stand on his own  
15 feet and assume reasonable responsibilities.

16 "Therefore, you will note, in the first year  
17 the apprentice is to be taught a number of simple  
18 operations which tend to familiarize him with the  
19 motor vehicles of various types and to do jobs  
20 which are necessary and yet hardly worthwhile for  
21 a full fledged mechanic.

22 "We would draw your attention here to Item 10  
23 where it is suggested the boy should be taken  
24 out on the service truck and taught to make emergency  
25 road checks. It is felt that in this way he will  
26 assimilate a great deal of valuable information in  
27 a short space of time.

28 "A study of the recommended first year training  
29 will quickly reveal that several of the subjects  
30 cannot be taught in school which may lead to the  
supposition that we encourage the idea of apprentices  
going directly into a shop rather than into technical  
classes. — Such is not the case, however, but where  
the boy starts his training in a vocational school

50

1 his training in the subjects which cannot be  
2 taught there are simply postponed until such time  
3 as he may be employed in a shop.

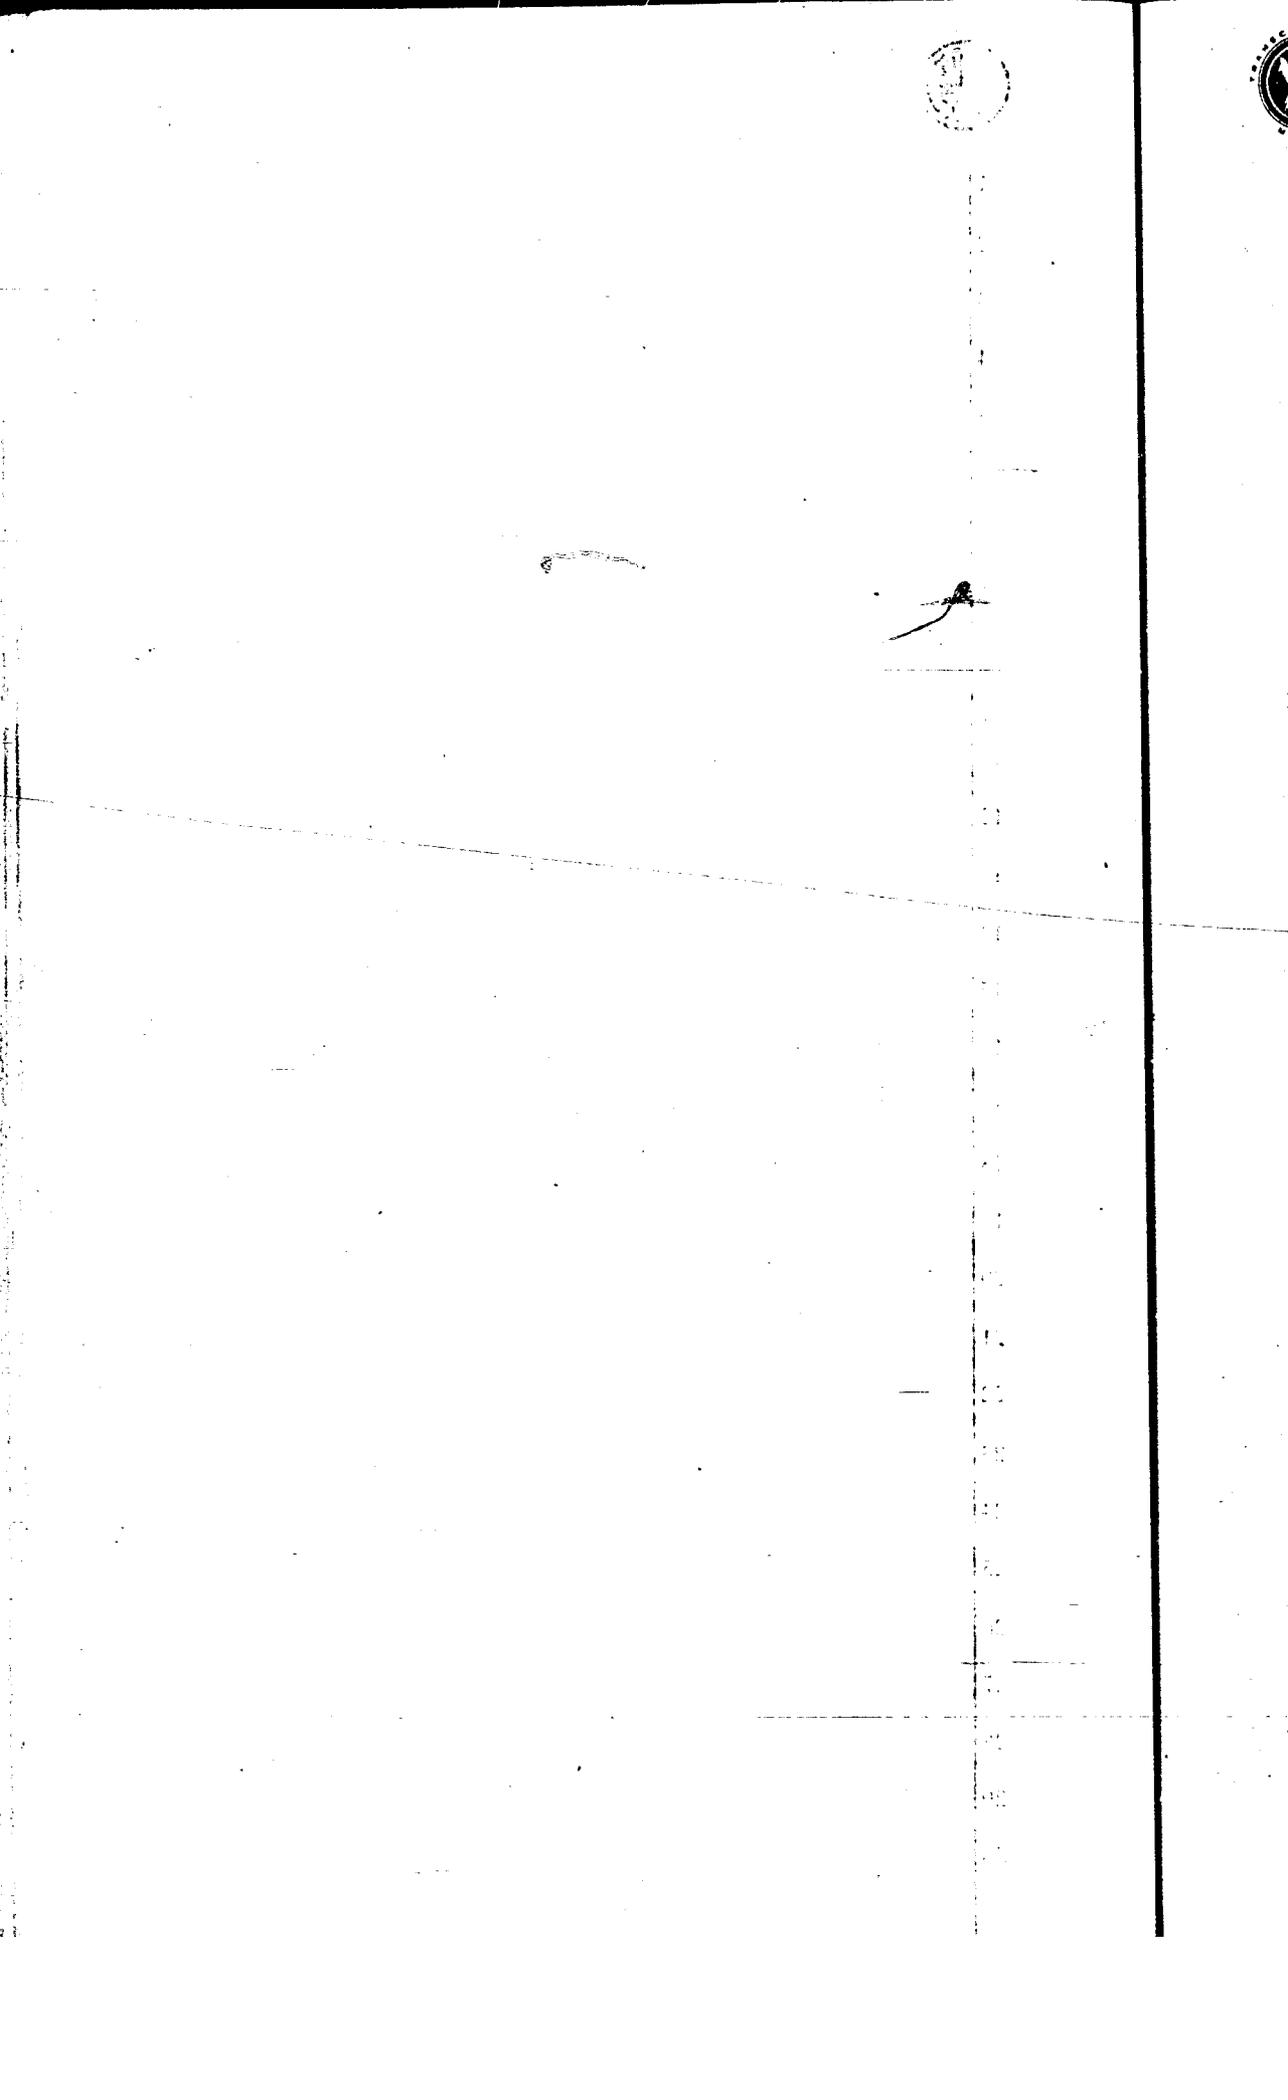

4 "Now let us turn to the second year. Here  
5 the apprentice is taught to remove and replace all  
6 the units of the vehicle, but not to make adjust-  
7 ments.

8 "In the third year he is taught to disassemble,  
9 reassemble and adjust many of the units of the  
10 vehicle. This teaches him a great deal about the  
11 component parts and implants the necessity for  
12 accuracy and care in his work.

13 "In the fourth year the apprentice proceeds  
14 into the most intricate details of overhaul, repair  
15 and adjustment of all units and at the end of this  
16 year he should be a reasonably proficient all-  
17 round mechanic.

18 "In the fifth year it will be noted that  
19 'Diagnosis of Troubles' appears in almost every  
20 section. It is felt that this is the seasoning  
21 period when the boy learns to take all the know-  
22 ledge he has gained in the previous four years and  
23 put in into practical application. It is felt that  
24 the progress made in this year will definitely mark  
25 the difference between a top notch man and a  
26 mediocre one.

27 "It will be noted that subject number one is  
28 'Tools' and that the proper use and care of tools  
29 is stressed right across the sheet. A study of  
30 automotive mechanics as a whole will reveal a  
shocking lack of knowledge as to the proper use of  
such common tools as taps, dies files, etc. Auto-  
motive mechanics who have graduated from machine  
shops are usually noticeably more proficient and

1 careful in the use of such tools than are the men  
2 who have gained all their training in automotive  
3 shops. This is not a desirable state of affairs  
4 and authorities are unanimous in the opinion that  
5 more painstaking attention must be given to this  
6 department of training. For this reason we give it  
7 top position in this chart.

8 "It will be noted that the complete chart is  
9 made to cover an all-round general mechanic but if  
10 the apprentice is to specialize his training is  
11 simply carried out across the page on whatever subject  
12 may be chosen and such specialization may start at  
13 any point. For example, he may study general repairs  
14 for two years and then confine himself to battery  
and electric work, or any other specialized branch.

15 "It is quite possible that the average apprentice  
16 will be found to excel in certain portions of the  
17 work. A periodic reference to the chart will enable  
18 both he and his instructor to determine the points  
19 of weakness so that proper steps may be taken to  
bring him up to standard on those subjects.

20 "This chart has been carefully examined by men who  
21 have had broad experience in teaching automotive  
22 mechanics, both elementary and advanced and they agree  
23 that it offers a simple and workable guide and that  
24 the plan of training is feasible and practical.

25 "The lack of such a standard in the past has  
26 proved a handicap and has often been unfair to the  
27 apprentice who having faithfully completed his five  
28 years of training found that he had not been taught  
29 certain things he should know if he wishes to work  
30 in a different shop.

"The Provincial Advisory Committee is well  
aware that there is a great deal of work yet to be

1 done before our apprentice training is properly  
2 laid out and fully efficient and in offering  
3 this chart they do so in the belief that it is  
4 a logical and necessary first step. It is  
5 believed that if the entire trade will adopt  
6 this standard and work to it that we will turn  
7 out better and more useful apprentices and that  
8 any further steps can be more effectively taken  
9 when the time comes."

1 Attention is also drawn to the proposed syllabus  
2 advanced by Mr. D. Amory of Chevrolet Motor Sales  
3 Limited, Montreal, who is planning opening an  
4 apprenticeship centre for the automotive trade in  
5 Montreal, under the apprenticeship assistance act,  
6 particulars of which follow:

(Reference: Report No. 78, Vol.K-63.

7 "PROPOSED SYLLABUS OF TRAINING MOTOR  
8 MECHANICS.

9 December 6, 1945.

10 "It is readily admitted that the following  
11 estimated times for training of mechanics can  
12 never be proven or substantiated. There are  
13 many reasons why this is true.

14 'On the job' training alone is not usually  
15 sufficient in itself to completely train a  
16 student so far as theory and function are con-  
17 cerned. Supplementary training of some manner  
18 is necessary to teach the 'Know Why' or 'How'  
19 knowledge to produce quality technicians.

20 "The difference in the individual student  
21 as well as the variation and ease with which  
22 things are learned in different shops, will  
23 naturally produce variations in the time re-  
24 quired.

25 "The ability of the student to learn and  
26 the ability of the instructor to teach.

27 "The type of work available and volume of  
28 each class of work in individual shops.

29 "The amount of specialization required.

30 "The quantity, type, and age of the equip-  
ment in the shops.

"All of the above reasons, and many other  
factors, make it obvious that it would be  
impossible to set a time basis for this type

1 of training. Therefore the times shown are  
2 suggested or estimated times only.

3 "The times shown, however, are the result  
4 of the thinking of all of the divisions of General  
5 Motors in the United States and Canada.

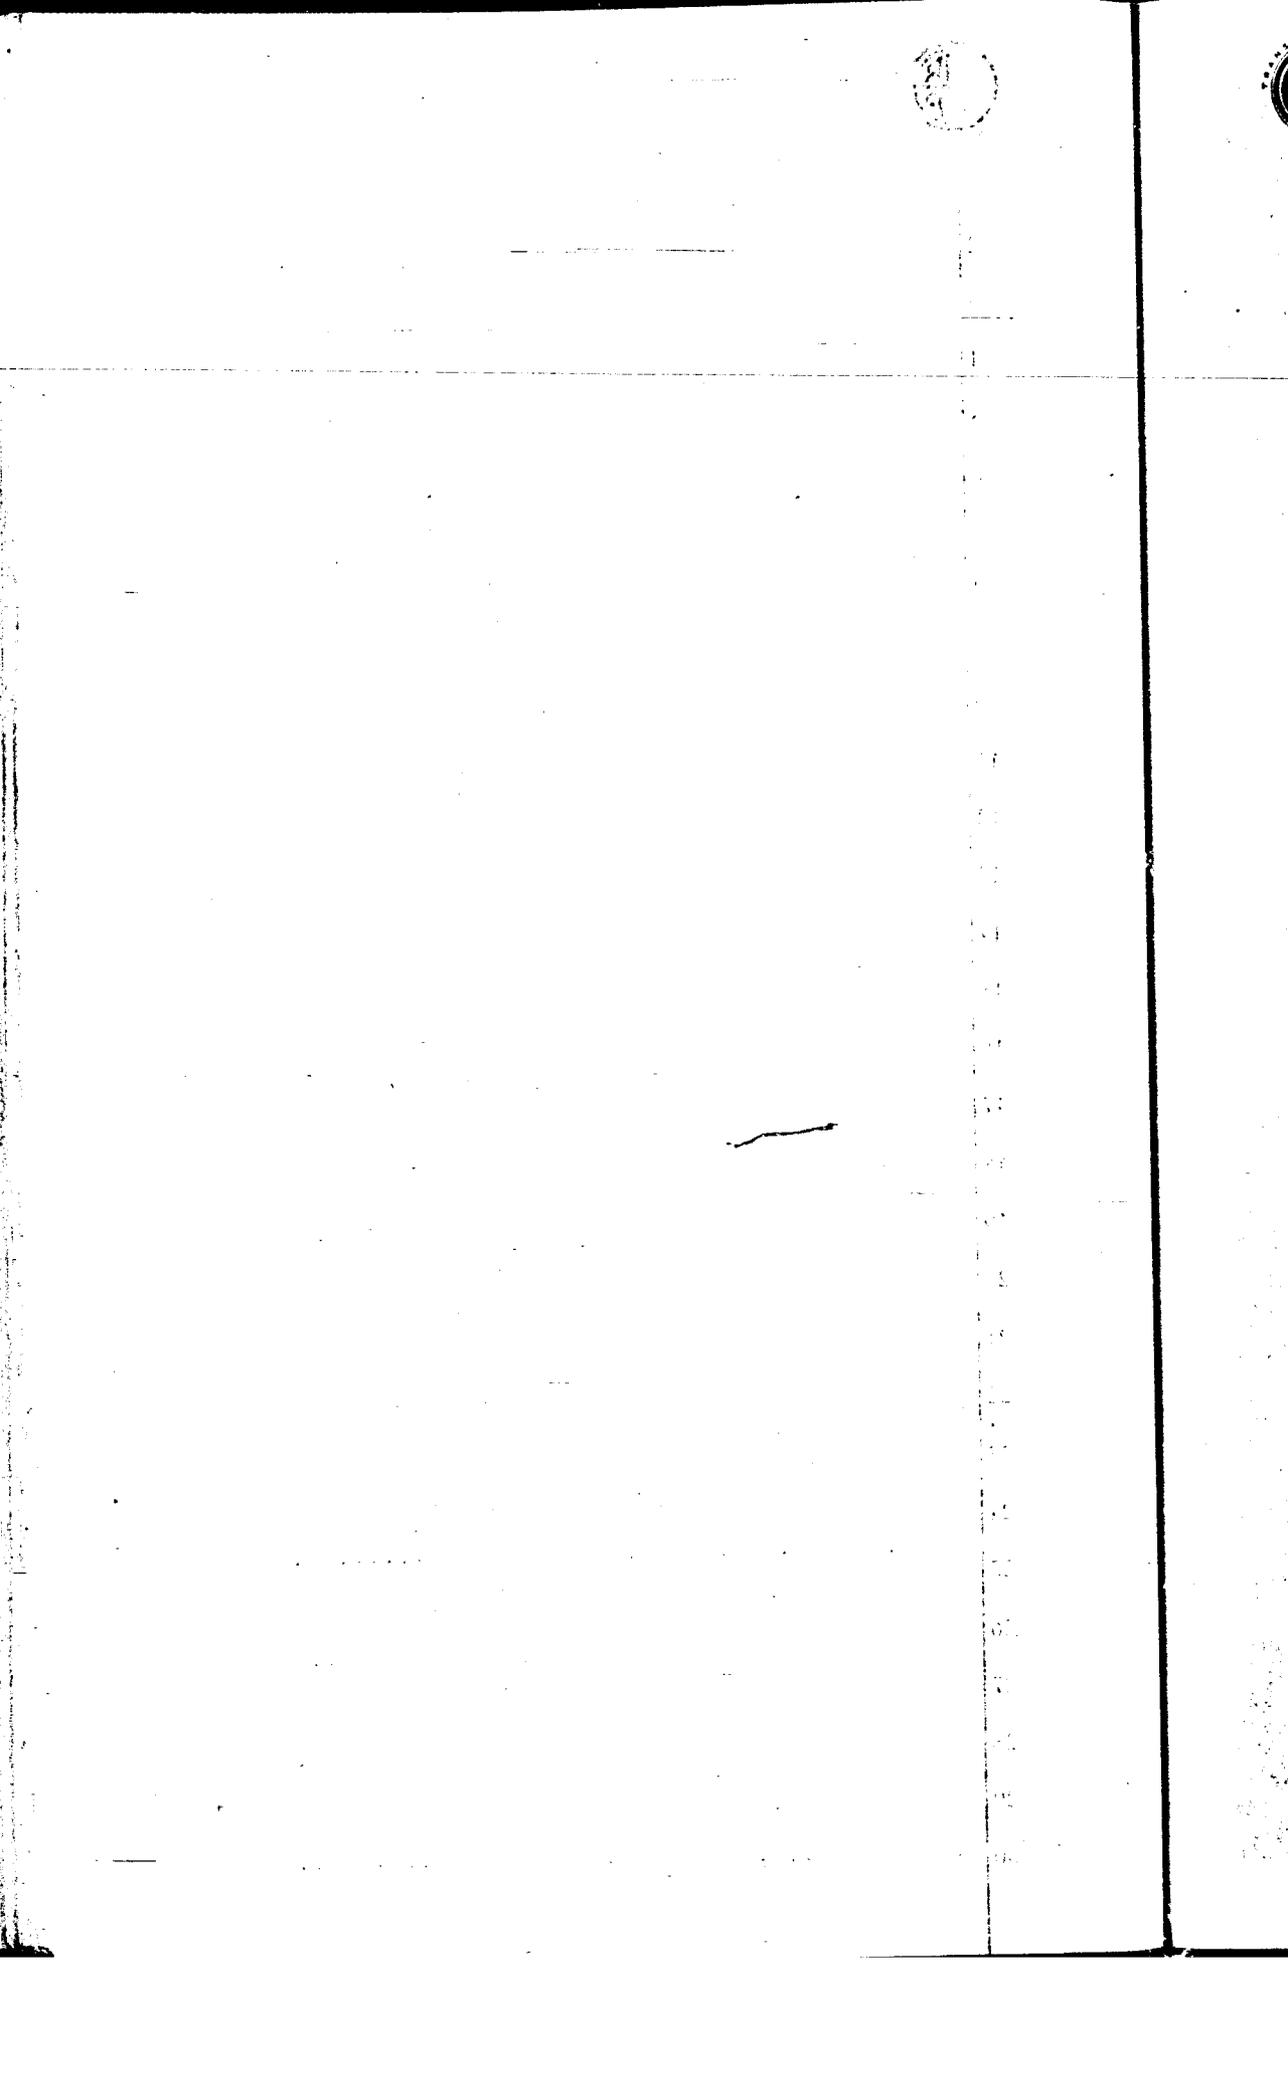

6 "The times shown are mainly for the pract-  
7 ical work side of the experience necessary and  
8 should be supplemented with tuition and self-  
9 study on the theory and function or operating  
10 principles of the subjects.

11 "This thinking is, of course, based on the  
12 fact that this type of training is being done in  
13 the average modern shop where the volume of work  
14 permits full coverage of all subjects. It is also  
15 based on the training of men on the products of  
16 General Motors only.

17 "Although the basic operating principles of  
18 all internal combustion automobiles and trucks  
19 are practically the same, it will naturally take  
20 longer to become thoroughly familiar with all  
21 makes and models of vehicles than with one  
22 manufacturer's products only.

1 (7)  
2 TRAINING FOR CIVILIAN JOBS

3 Much evidence has been heard and much dis-  
4 cussion has taken place on the question of apprentice-  
5 ships and training on the job. It would appear, how-  
6 ever, that in relation to trades little, or nothing,  
7 will be accomplished if consideration is not given  
8 to the wide divergencies in the matter of training  
9 syllabi. It has been pointed out that since there  
10 is no standardization laid down or developed by the  
11 civilian industry for the requirements of an auto-  
12 motive mechanic, there is no basis upon which the  
13 syllabus of a training school or the programme of  
14 training on the job can be assessed. The position,  
15 therefore, is that there is lacking not only a  
16 common system between the different provinces but  
17 within provinces. For that reason it is felt  
18 that unless action is taken forthwith to determine  
19 the period of time required to train a mechanic  
20 and the skills required within that period, in  
21 order that a syllabus and programme of training  
22 may be laid down based upon such standards, and  
23 permitting the assessment of any degree of  
24 competency to be determined at any given point  
25 within that period, anything beyond being a full  
26 fledged journeyman, no satisfaction will be obtained,  
27 neither will the problem of re-employment of the  
28 veteran be solved as it has been clearly shown that  
29 employers are not prepared to accept any assessment  
30 of competency other than their own at this time.  
In this connection reference is made to and particular  
emphasis placed upon the Third Report, Section II,  
pages 1 to 5, including Recommendations Nos. 62, 72  
and 84.

1           Contracts entered into by C.V.T. for train-  
2 ing on the job; while they permit the subsidizing  
3 of wages for a specific period, do not provide  
4 any guarantee to the veteran that he will receive  
5 any specific training or acquire any laid down skills  
6 within the period of the contract. Further,  
7 as the employer does not assume any responsibility  
8 for a training programme determining the skills  
9 to be assimilated by the veteran in any given  
10 period, and as there is no recognised standard test  
11 to determine results, it is possible for a veteran  
12 to outrun his contract period, at reduced wages  
13 to the employer, having acquired only a part  
14 of the skills which should normally accrue to  
him under a properly laid down and regulated plan.

15           In paragraph No. 6 reference is made to  
16 the "Proposed grading standards for motor vehicle  
17 repair trade" which is presently under consideration  
18 as the basis for a standard of skills required under  
19 the five-year apprenticeship in the Province of  
20 Ontario. In the same paragraph reference also was  
21 made to the proposed syllabus in training motor  
22 mechanics as submitted by Mr. D. Amory of  
23 Montreal, who is Chairman of the Apprenticeship Com-  
24 mission of Automobile Trades of Montreal and District,  
25 which is now in course of formation. These sub-  
26 missions in their present form are not considered  
27 to be perfect or final. They are submitted as a  
28 basis from which it is hoped a uniform standard  
29 might be established. This, the Commission con-  
30 siders, is a very definite step in the right  
direction but it would seem in consideration of the  
immediate urgency and the time factor that some  
impetus should be given to this movement in order

The first part of the document discusses the importance of maintaining accurate records of all transactions. It emphasizes that every entry should be clearly documented and supported by appropriate evidence. This ensures transparency and accountability in the financial process.

In the second section, the author outlines the various methods used to collect and analyze data. These methods include direct observation, interviews, and the use of specialized software tools. Each method is described in detail, highlighting its strengths and limitations.

The third section focuses on the results of the study. It presents a comprehensive overview of the findings, which show a significant correlation between the variables being studied. The data indicates that the proposed model is effective in predicting the outcomes of the research.

Finally, the document concludes with a series of recommendations for future research. It suggests that further studies should be conducted to explore the long-term effects of the findings and to test the model in different contexts. The author also provides a list of references for further reading on the subject.

ROYAL COMMISSION ON VETERANS' QUALIFICATIONS

SURVEY RE VETERANS EMPLOYED IN AUTOMOBILE AND ALLIED

TRADES:

This report is a consolidation of returns received from seven automotive firms in the City of Montreal.

1. Q.-How many do you employ in your service activities?

A. Three hundred and eleven.

2. Q. How many veteran mechanics have returned to you?

A. Twenty-six.

(a) What are they doing now?

- (a) 1 - R.A.F.T.C.
- 1 - Purchased interest in dealership
- 1 - Entered trucking business
- 8 - Employed as Mechanics.
- 1 - Employed as stockman
- 1 - Employed as service inspector
- 10 - Apprentices
- 1 - Body & Fender Repairer
- 1 - C.N. Railways
- 1 - Returned to Army

(b) What were they doing in the service?

- (b) 4 - Army Motor Mechanics
- 1 - Parts Man
- 1 - Aero Engine Mechanic
- 1 - Navy Motor Mechanic
- 9 - M.T. Drivers
- 2 - R.C.O.C.
- 8 - Not accounted for

(c) Has their service impaired their efficiency?

- (c) 1 - Improved it considerably
- 1 - To a certain degree

7

- 5 - No
- 1 - Yes - very slow, unabl. to compete with higher speed mechanics, lost track of modern tool equipment, etc.

1 - No reply

3. Q.- How many new veteran mechanics have you employed since V-J day?

A. - Seventy-seven.

(a) How many are still with you?

A. - Fifty-six

(b) What are they doing now? (b) 4 - Parts Men  
 28 - Mechanics  
 3 - Salesmen  
 17 - Apprentices  
 1 - Driver  
 3 - Floor Service Men

(c) What were they doing in the service?

- 1 - Army Captain
- 1 - Captain R.O.R.M.E.
- 1 - Lt. R.O.R.M.E.
- 1 - Army M.T. Class "A" Fitter
- 2 - R.C.A.S.O.
- 2 - R.G.O.G.
- 1 - L.A.O.
- 1 - Army G.S.
- 2 - Infantry
- 5 - R.C.A.F. (A.E.F.)
- 2 - R.C.N.S.
- 10 - Transport Drivers
- 15 - Army Motor Mechanics
- 1 - Armoured Corps
- 1 - Army Reconnaissance
- 1 - Driver Mechanic
- 9 - No record

1 - Volunt-  
arily.

23 (5) Q.- Did they have competence  
24 cards from the examining  
25 committee before you engaged  
26 them?

A. 2 - No  
1 - Majority,  
yes  
2 - Yes  
1 - Not all  
of them  
1 - 3 out  
of 7

27 (6) Q.- Have they competence  
28 cards now?

A. 1 - Yes - 30  
days after  
starting  
work  
5 - Yes  
1 - All  
necessary.

Vertical text or markings along the right edge of the page, possibly bleed-through from the reverse side.

- 1 (c) Were these issued on (c) 5 -By examination  
 2 your recommendation of committee  
 3 or by examination of 1 -No answer  
 4 committee? 1 - Both
7. Q.- Did they produce any card A. 1 -Those that have  
 4 of classification from them - all since  
 5 the services? Sept.1945.  
 6 3 -No  
 7 1 - Yes  
 8 1 -In very few  
 9 cases  
 10 1 -In some instances
8. Q.-Do you understand what A. 4 -No  
 8 the service classific- 3 -Yes  
 9 ation implies in the  
 10 matter of skills?
9. Q.-Have you received or seen A. (E.G.) (N.R.) (O.O.)  
 10 all or any of the follow-  
 11 ing booklets:  
 12 (a) Employers Guide (A.F.) Yes 2 2 1  
 (b) Naval rates (N) No 5 5 3  
 (c) Occupational outlines (A)
10. Q.-Did you understand them? Yes 2 2 1  
 13 No 5 5 6
11. Q.-Now having a knowledge of A. 2 - Yes  
 14 the skills required by 1 - No answer  
 15 a vehicle mechanic under 1 - Do not know  
 16 the army classifications, 1 - No, in many  
 17 would you say that a "B" cases these  
 18 class mechanic should be men have re-  
 19 accepted as a qualified ceived 2nd or  
 20 civilian mechanic 3rd class  
 21 class "A" by comparison apprentice  
 22 with existing standards cards  
 23 in the trade? 1 - No, should be  
 24 accepted as  
 25 2nd class  
 26 mechanic  
 27 1 - No
12. Q.-Would you say that an "A" A. 2 - Yes  
 21 class mechanic should 1 - No answer  
 22 similarly be classified 2 - No  
 23 as a "Foreman" or top 1 - No, should be  
 24 trade mechanic? accepted as a  
 25 first class  
 26 mechanic  
 27 1 - Depends on ex-  
 28 perience before  
 29 entering the  
 30 Services.
13. Q.-Would the information in A. 5 - Yes  
 27 detail covering service 1 - Do not know  
 28 skills be of use to you? 1 - We have this  
 29 available.
14. Q.- How many additional mechanics  
 30 do you need? A. 73

15. Q. - In what trades? A.

Motor Mechanics  
Body and Repair  
Workers  
Radiator Repair  
Specialists  
Electrical  
Spray Painters

16. Q. - Would you hire "B" class mechanics to fill these vacancies if you could get them? A.

3 - Yes  
2 - We certainly could try them out.  
1 - We do not know - we go according to their knowledge and classification by the Joint Committee.  
1 - No, unless they can qualify as "B" mechanics under our competency examination.

17. Q. - Do you need any helpers or apprentices? A. 1

1 - Not if "B" class mechanics available.  
3 - No  
2 - Not at present.  
1 - No. We have accepted, during the last 6 months, all we now have training.

18. Q. - Would you employ "C" class mechanics to fill this requirement. (Yes) A. 2

2 - Yes  
1 - Providing they would be satisfied with apprentices' wages.  
1 - We do not know.  
2 - No  
1 - Do not require any.

19. Q. - Will you give preference to veterans on an equitable basis? A. 1

1 - Decidedly yes  
6 - Yes

20. Q. - Do you favour a national standard of trade classifications for the Automotive and Allied Trades? A. 6

6 - Yes.  
1 - Very idealistic, but in our opinion unobtainable with present conditions throughout the industry across Canada and the divergencies of

1                    SUBSECTION V - MINING AREAS.

2 (1). GENERAL.

3                    The area of northwestern Quebec is a region  
4 based on an expanding economy. Undoubtedly woods'  
5 production will increase and increases will be  
6 still more pronounced in the case of the mining  
7 industry which is the chief basis of present  
8 employment in the region.

9                    The mining industry was restricted during  
10 the war owing to certain rulings of the Manpower  
11 Commission, giving gold mining a low priority.  
12 This caused a decided shrinkage in the number of  
13 workers on the payrolls of mines. This shrinkage was  
14 so pronounced that numbers of mines were compelled  
15 to restrict their activities only to the develop-  
16 ment of ore.

17                    From evidence repeatedly heard at the sittings  
18 of the Commission in Val d'Or it was learned that  
19 everyone in that district is anticipating a very  
20 greatly increased payroll in the near future.  
21 Indeed this hope and expectation is in the pro-  
22 cess of being fulfilled, because from different  
23 sources it was learned that many persons already  
24 have found their way back from the large centres  
25 of population and from the various Services to  
26 work at the mines. This has meant for many  
27 veterans a return to former work, but for others  
28 entirely new employment.

29                    One aspect seemed very clear, however, that  
30 a limiting factor on the development of the min-  
ing industry would be the serious lack of skilled  
help and the lack of suitable housing, to  
accommodate the new workers and their families.  
Skilled help in the field of mining includes those

3

1 activities commonly called the building trades.  
2 It would appear that this two-fold demand for the  
3 same craftsmen will accentuate the problem for  
4 the immediate future. With a longer term view,  
5 education and technical training were prominently  
6 mentioned as one of the basic needs urgently re-  
7 quired. There are no facilities in the area by  
8 which the veteran can add to his in-service training  
9 in the realm of trade practice and no means at  
10 hand for those with certain trade training to secure  
11 a theoretical background to augment that experience.  
12 This is particularly serious because the day has  
13 long since passed when it was felt that all one  
14 needed to know about practical work could be secured  
15 on the job. In general then, facilities for vo-  
16 cational training are needed.

17 What type of facilities should be provided and  
18 what service should these facilities provide?

19 It should be recorded here that the present  
20 population of Val d'Or is 7,500, and it was stated  
21 that this should grow to 12,500 within a period of  
22 four years. The population centering on Rouyn is  
23 20,000, and it was stated that this should grow to  
24 29,000 within a similar period.

25 These municipalities present an appearance of  
26 sound stability and have all of the services, such  
27 as sewers, water systems and the like enjoyed by any  
28 other centres based on a widely diversified economy.  
29 Several witnesses expressed themselves as being  
30 optimistic about the continuity of opportunity and  
employment. It was pointed out that any shifting of  
employment is usually largely by personal choice.

When Dr. Price, Chief Geologist of Noranda Mines,  
was questioned as to the possible life of the district

1 he intimated that recent developments had greatly  
2 lengthened its foreseeable life and said - "As to  
3 this area being short-lived you can say that isn't  
4 true."

5 Mr. W.J. Bichan, geologist, stated that it  
6 could be expected that the mining industry of the  
7 district would have a life of 75 years. He filed  
8 the following statement which elaborates on the  
9 stability of this industry.

10 "VETERANS EMPLOYMENT OPPORTUNITIES IN NORTHWESTERN  
11 QUEBEC

12 1. Stability of Occupation.

13 "(a) GOLD MINING - commercial gold deposits  
14 of Northwestern Quebec are of the character-  
15 istically deep-seated type now being worked in  
16 the Porcupine and Kirkland Lake camps of  
17 Canada, the Homestake of the U.S.A., Morro  
18 Velho of Brazil, Kolar Gold Field of India,  
19 and gold productions centres of Western  
20 Australia.

21 "In speaking of these deposits as deep-  
22 seated we mean that economic bodies of gold-  
23 bearing material will persist or recur in these  
24 localities to the maximum depth at which it is  
25 possible to carry on mining operations.

26 "The depths at which mining progresses are  
27 approximately as follows: Brazil, 8,500 feet;  
28 South Africa 8,000 to 9,000 feet; India 8,000  
29 feet, with plans already made for operations to  
30 be extended throughout the 8,000 to 10,000 feet  
range.

"While mining operations in Canada have yet to  
be inaugurated on any very great scale below a

Vertical text or markings along the right edge of the page, possibly bleed-through from the reverse side.

1 depth of 7,000 feet, nevertheless unusually  
2 favourable rock temperature conditions at  
3 surface and a relatively low increment rate  
4 at increasing depth give a prospect of mining  
5 being continued to depths in excess of 10,000  
6 feet with an ultimate limit as seen at present of  
7 somewhere in the neighbourhood of 12,000 feet.

8 "A commonly accepted standard of practice on  
9 both well-established properties and those newly  
10 brought into production provides for the mining  
11 or removal of an average of six inches of the  
12 vertical extent of the ore-bodies during each  
13 day. This means that if a deposit contains  
14 1,000 tons of ore in every vertical foot of its  
15 known and projected extent, then the normal  
16 rate of mining operations will entail the re-  
17 covery and processing of 500 tons each day.

18 "Whereas formerly a life for a mine of from  
19 20 to 25 years was considered normal, with in-  
20 creasingly conservative rates of ore removal it  
21 is now usual to plan for continuous operations  
22 during a period of 40 to 50 years.

23 "It can readily be seen that if six inches of  
24 the vertical extent of the deposit are removed  
25 daily, approximately 180 feet will be removed  
26 each year. Thus the end of a 40-year life a mine  
27 will have removed all of its ore down to a depth  
28 of 7,200 feet, provided that the operations  
29 have been carried on in strict sequence. In  
30 actual practice it is likely that preparation of  
ore-bodies for subsequent removal will be underway  
to a depth 2,000 feet in excess of the above  
figure and that ore removal on varying scales  
will be in progress on a number of horizons in  
the mine.

Vertical text or markings along the right edge of the page, possibly bleed-through from the reverse side.

1 "In conclusion, it can be stated emphatically  
2 that geological expectations for the persistence  
3 or recurrence of commercial gold concentrations,  
4 as well as the capacity of known mining techniques,  
5 are such that a continuity of mining operations  
6 in excess of 40 years may be safely predicted for  
7 several localities in Northwestern Quebec. Amongst  
8 these centres we may include Noranda, Bourlamaque,  
9 and Malartic. The life expectancy of the mining  
10 phase of the industrial life of Northwestern  
11 Quebec may be further extended to 75 years when  
12 the steady inauguration of production from success-  
13 14 15 16 17 18 19 20 21 22 23 24 25 26 27 28 29 30  
14 15 16 17 18 19 20 21 22 23 24 25 26 27 28 29 30  
ive properties brought within convenient access  
is taken into account.

"Briefly, Noranda, Val d'Or - Bourlamaque,  
and Malartic will be important mining centres  
during the coming 75 years, even if the price  
of gold remains stabilized at its present figure  
and providing that the general level of wages  
is not in excess of 30% above that prevailing  
in 1938-39.

"As a corollary it may be stated that con-  
tinuously profitable operations have been going  
on in the Kolar Gold Field of India during the  
past 60 years and that operations in South  
Africa are approaching that length of existence,  
with the end not yet in sight.

"(b) BASE METAL MINING - this phase of the  
industry, although having its inception at  
Noranda in 1927 is only as yet in its infancy  
in this part of Canada.

"Having regard to the general size and extent  
of base metal ore concentrations we can predict

Vertical text or markings along the right edge of the page, possibly a page number or reference code.

1 a life comparable with that of the Sullivan  
2 mine of the Consolidated Mining and Smelting  
3 Co. of Canada for operations on known, in-  
4 dicated and presupposed base metal ore-bodies  
5 in this neighbourhood. In other words, a life  
6 of 30 years or more is a conservative estimate  
7 for major base metal mines.

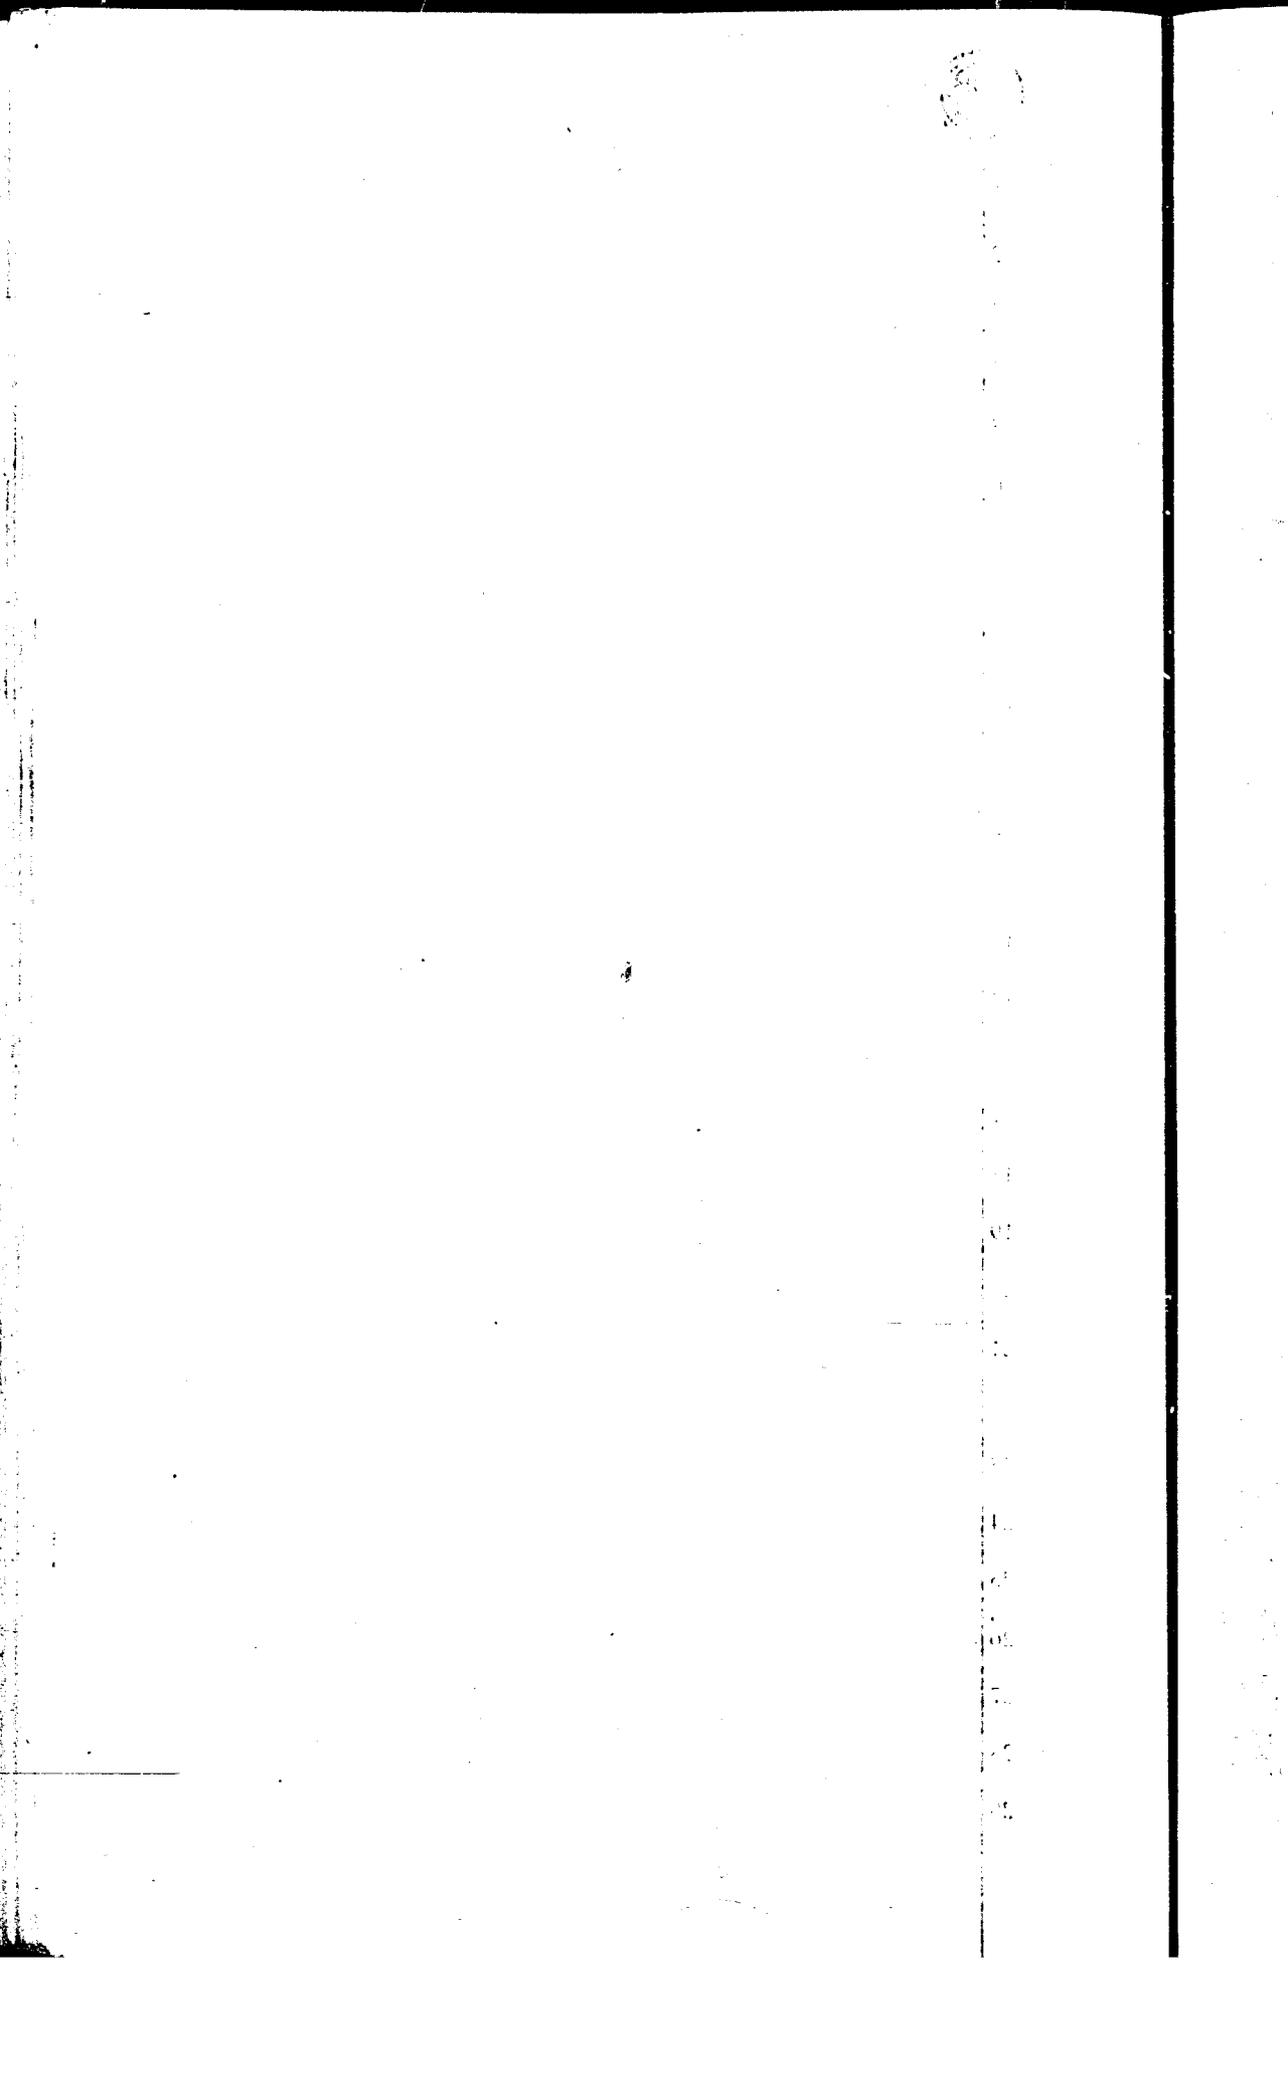

8 "In spite of the increasing importance of  
9 base metal mining in the province it is con-  
10 sidered that it will remain secondary to gold  
11 mining so long as gold remains the standard of  
12 commercial interchange.

13 (Signed - W. James Bichan  
14 Feb. 21, 1946. KEATING and BICHAN."

15 This would seem to dispel any concern on this  
16 score and gives a basis for any long term planning.

17 The immediate concern of this Commission is  
18 the problem confronting veterans and likewise that  
19 of employers in aiding in the full rehabilitation  
20 of the veteran. New training, re-training, or  
21 further training of a trade nature looms very  
22 prominently in the problem. This, of course, takes  
23 on the usual two-fold aspect of training in the  
24 practice of the various activities and in the  
25 theory related or basic to a given kind of work.

26 The former may take on in its entirety the  
27 nature of on-the-job training and the latter  
28 might be accomplished through the medium of evening-  
29 school programmes, or some combination of these  
30 such as so-called co-operative training which  
might be worked out by certain employers. This  
type of training usually requires two trainees  
working and studying opposite each other, that is

1 to say, one attends school while the other carries  
2 on the job. The period varies from two to eight  
3 weeks. While this type of programs is admirable  
4 for teen-age people, it nevertheless could well  
5 serve certain veterans.

6 There will, of course, be those veterans who  
7 will be at a suitable level and have the capacity  
8 for further study of a more abstract nature at  
9 the post-secondary school level. In formulating  
10 general plans, therefore, thought should be given  
11 to making provision for expanding objectives so  
12 that eventually as the need presents itself it will  
13 be possible for individuals to expand their  
14 capabilities by mastering the higher techniques  
15 relating to their work. This is the function  
16 of the Technical Institute.

17 Any such programs primarily set up to facilitate  
18 the employment and advancement of veterans can very  
19 well have a continuing function with the future  
20 civilian population.

21 The Commission heard from several witnesses  
22 that satisfactory arrangements for the handling  
23 of veterans' affairs have not been organized.  
24 It was stated by Dr. Price and others that un-  
25 reasonable delays in such matters were being ex-  
26 perenced and that it has been found difficult  
27 to contact responsible officers in charge of the  
28 administration of veterans' benefits.

29 The evidence of Dr. Price who is chief geologist  
30 of Noranda Mines and Chairman of the Rehabilitation  
Committee, a senior official of great experience  
who has assumed heavy responsibilities as a  
voluntary worker appears to the Commission of  
such importance that a part at least must be

Vertical text or markings along the right edge of the page, possibly bleed-through from the reverse side.

1 "THE WITNESS: The next complaint that I have  
2 is the number of fellows sent up from down below,  
3 both in uniform and out of uniform, who are  
4 supposed to be connected with rehabilitation,  
5 who come up here and spend maybe twenty-four  
6 or forty-eight hours in the area and then go  
7 back and write some kind of a report.

8 "One of them came up here to see me and asked  
9 me what my chief troubles were. I told him that  
10 first on the list I would put housing. Then he  
11 asked me what was next; and I said, "fellows  
12 like you".

13 "We must have had at least half a dozen of them  
14 up here. One famous case is that of a fellow who  
15 came up here and got drunk and stayed drunk all  
16 the time he was here. That has created a very  
17 bad impression; and they haven't even made an  
18 effort to see the employers in the district, or  
19 anything else.

20 "THE CHAIRMAN: Excuse me, did you say they  
21 came to see you as Chairman of the Citizens'  
22 Rehabilitation Committee?"

23 "THE WITNESS: Yes.

24 "THE CHAIRMAN: They did not come to you as being  
25 connected with an employer?"

26 "THE WITNESS: No. They just came to see me  
27 as Chairman of the Committee, and wanted to know  
28 what views I had, and complaints.

29 "THE CHAIRMAN: You say that they did not go  
30 to the employers to your knowledge?"

"THE WITNESS: No, sir. And I would say that  
sending fellows like that around -- and I think  
that some of the others here will corroborate  
what I say -- Mr. Grenier, do you agree with me?"

Vertical text or markings along the right edge of the page, possibly bleed-through from the reverse side.

Small vertical mark or text on the left edge of the page.

1 "MR. GRENIER: Yes, that is so.

2 "THE WITNESS: We can back our statements up  
3 by facts. It is the worst sort of thing that  
4 could happen; and the worst thing about it is  
5 the harm it does the veterans.

6 "THE WITNESS: This, sir, concerns a man by  
7 the name of Joseph Bolduc who is a veteran of  
8 two wars and who was discharged last May in June.  
9 He came to us and said that he wanted to take a  
10 course of training on the job as a projectionist  
11 in a motion picture house. We did some enquiring  
12 around and found that he could take a course of  
13 that kind at the Capitol Theatre under the  
14 managership of Mr. Sam Gorman; and we wrote down  
15 and asked whether this man could be counselled  
16 and put on this course. This was in June. In  
17 July a Mr. Guay came up from Montreal and  
18 counselled Mr. Bolduc, and in company with me we  
19 interviewed Mr. Gorman, and at that time the  
20 thing was arranged and Mr. Gorman gave Mr. Guay  
21 a letter stating that he would give this man  
22 training, and also that he would guarantee him a  
23 job when he got through; which was fair enough.  
24 We heard no more of the case until last September  
25 when Mr. Maines and Mr. Lafond came up from the  
26 O.V.T. and we asked them what about it and they  
27 said there was no contract yet. So we asked them  
28 to get the contract through; and they interviewed  
29 Mr. Gorman again, and Mr. Bolduc again and they  
30 left. We heard no more about it in October. In  
the meantime Mr. Bolduc had been working in a  
concentrator as a dry man and change-house man,  
and the concentrator people had hired another  
man to take his place. So I got hold of Mr. Gorman,

Vertical text or markings along the right edge of the page, possibly a page number or reference code.

Faint, illegible markings or text located at the bottom right corner of the page.

1 as these men had promised that the thing would  
2 go through, and I said to him, why don't you  
3 start him to work. So he put him on. That was in  
4 the latter part of October. In the middle of  
5 December Bolduc came to me and said, I have no  
6 money yet; and he said Mr. Corman was getting  
7 pretty restive. So we wired them again, and  
8 finally the contract did arrive, sometime around  
9 the latter part of December; but still no money.  
10 Mr. Corman paid him \$100.00 on spec. And finally  
11 around the middle of January Mr. Bolduc came to  
12 me and said, well I don't know whether to quit  
13 or not. And finally the first cheque did arrive.  
14 That was in January.

15 "THE CHAIRMAN: A cheque for how much?

16 "THE WITNESS: For \$194.00. Now, that thing  
17 dragged on from June until January before it  
18 was actually settled. The whole case was one  
19 which just showed that the thing had been swapped  
20 from one person to another. And that did not leave  
21 a very good impression. I thought you might be  
22 interested in the facts in that case."

23 The Commission wishes to state that while it  
24 concurs with Dr. Price's opinion that serious  
25 difficulties exist, it does not feel that the comparat-  
26 ively new staff at Montreal is by any means entirely  
27 to blame. The Commission regrets that its own previous  
28 report did not (partly owing to pressure of time) deal  
29 adequately with this and some of the outlying areas.

30 In commenting on any blame which might have been  
associated with Governmental departments, the Commission  
wishes to express great appreciation of the co-  
operation shown by D.V.A., C.V.T. and the Employment  
Service. Particularly it should be noted that Colonel

The page contains extremely faint and illegible text, likely bleed-through from the reverse side of the document. The text is scattered across the page and cannot be transcribed.

1 A.J. Lemay, Colonel R. Dupuis and Mr. S. Mizgala  
2 rendered most valuable assistance at the hearings  
3 of the Commission at which they were present,  
4 as well as the necessary directions to follow  
5 up evidence which had been tabled at those sessions.

6 (2) EMPLOYMENT OPPORTUNITIES.

7 In this matter Val d'Or may be taken as an  
8 example. This centre of mining activity in the  
9 Abitibi District had a pre-war population of some  
10 5,000 people. Although many of the pre-war  
11 inhabitants are reported to have left during the  
12 War years to seek war-time employment in addition  
13 to the three or four hundred who enlisted in the  
14 Armed Services, there was no noted decrease in  
15 the population. With the cessation of hostilities  
16 the former residents are returning and with new-  
17 comers in the van of those expected to come to  
18 participate in the unprecedented expansion and era  
19 of prosperity predicted for the district the  
20 population as above mentioned now numbers some  
21 7,500. Mayor Berard expects this number to in-  
22 crease considerably in the very near future pro-  
23 vided a sufficient number of dwellings can be  
24 built to provide lodgings.

25 Lack of housing facilities more than any other  
26 factor is delaying the expansion of this district  
27 as what is true for Val d'Or is also true of the  
28 smaller surrounding settlements of Senneterre, and  
29 Sullivan,

30 It is estimated that employment in this district  
can be easily found for more than 10,000 veterans.  
To date no case of unemployment or the inability  
of a veteran to find a job has been reported to  
local Branch of the Canadian Legion which

1 joying a rapid increase in membership.

2 It will be convenient to consider the findings  
3 at Val d'Or under the headings following:

4 Normal Employment

5 Building Trades

6 Mining  
7 Communications

8 National Park, including hunting  
and fishing

9 **(3) NORMAL EMPLOYMENT.**

10 This rapidly growing region offers normal urban  
11 employment opportunities in shops, garages and  
12 ateliers to be found in any centre of a like  
13 nature. Although the prosperity of the area is  
14 dependant upon the activity at the mines, there  
15 is apparently a long period of production ex-  
16 pected from the established mines and new discoveries  
17 in the area with consequent development are con-  
18 fidently predicted. Without exception all business  
19 and other employers state they have need of more  
20 assistance in their various lines of endeavour.

21 The need is particularly great for those who  
22 have some type of skill. The building and allied  
23 trades will be dealt with in another paragraph,  
24 but all employers in other callings complain of  
25 the difficulty of obtaining help. The garages  
26 can all absorb additional mechanics. It is stated  
27 that there are very few capable auto mechanics in  
28 the North. Local electrical men state there are  
29 not sufficient tradesmen trained in the repair and  
30 maintenance of household appliances to take care  
of the demand which is expected to grow. There  
can be employed in the refrigeration repair field  
alone some five or six tradesmen.

It would appear to the Commission that any

29  
30

2 trained tradesman would find immediate employ-  
3 ment at profitable rates of pay in this district.

4 The Commission deals elsewhere with the  
5 situation in respect to untrained or partially  
6 trained tradesmen and the training facilities  
7 available or recommended for them.

8 BUILDING TRADES.

9 The greatest need at the moment in this area  
10 is housing for the population. All witnesses  
11 from the Mayor of Val d'Or through each re-  
12 presentative stressed this problem. It is stated  
13 that there is immediately available the wood  
14 and cement with which to construct all the houses  
15 required, but that the skilled workmen and more  
16 particularly the other vital materials necessary  
17 to construct houses are not available and from  
18 present indications will not be available, for  
19 another year. If the town is to benefit, most  
20 of the immediate housing requirements must be  
21 constructed prior to next winter. The Commission  
22 was asked to use its best endeavours to see that  
23 the necessary materials were made available.

24 There are an insufficient number of skilled  
25 tradesmen available in the building trades. No  
26 trade is an exception. It is to be noted that in  
27 this pioneering community the same standard of  
28 of skill which might be insisted upon in a more  
29 settled and older area would not be required. There  
30 are no Parity Committees established except at  
Amos. No examination as to qualifications are  
required. There are no union restrictions. The  
sole need is for a man with sufficient qualifi-  
cations to do a job. For the veteran this would

2

1 mean the opportunity to become established in  
2 a trade in the minimum period dependent on his own  
3 ability to acquire the necessary skill in order  
4 to command the highest rates of pay.

5 Some of the witnesses referred in their  
6 evidence to apprentices but more often they  
7 referred to helpers, and it is felt that the words  
8 are synonomous in this district. All employers  
9 wish to take on first, skilled tradesmen and  
10 secondly helpers, and it is inferred that as soon  
11 as a man shows some ability he will quickly reach  
12 journeyman status and pay. The only means at  
13 the moment open to a beginner in a trade to learn  
14 is through the training on the job. There are  
15 no Apprenticeship Training Centres nor Vocational  
16 Schools except for one "Initiation Centre" at  
17 Rouyn. The Commission concludes that there are  
18 enormous opportunities not only for skilled trades-  
19 men in the building trades in the community in  
20 construction and repair work, as well as employment  
21 as tradesmen in the mines, and that there is an  
22 equal opportunity for beginners to obtain employ-  
23 ment and training.

#### 24 MINERS.

25 This area is predominantly a mining district  
26 and the bulk of employment is available in the  
27 mines. There is a tremendous demand for under-  
28 ground miners, all company managers in the area  
29 saying they are unable to obtain the required  
30 number to work their properties to plant capacity.  
This lack of underground workers is diminishing the  
potential demand for surface workers and tradesmen.  
It is estimated that at least 4,000 and possibly many  
more underground miners can find employment in the

Vertical text or markings along the right edge of the page, possibly a page number or index.

1 district,

2 The miners are organized in a C.I.O.  
3 affiliated Union whose secretary, Mr. Lachance,  
4 indicated they were anxious to have veterans join  
5 and that there were no restrictions in the organ-  
6 ization which would prevent or make it difficult  
7 for a veteran to join. This was due to the fact  
8 that no present employees are likely to be  
9 discharged to make room for a veteran because  
there are more vacancies than applicants.

10 Although the majority on the payroll of a  
11 mine are underground workers, there are many  
12 employed on the surface including building trades-  
13 men and machinists. The mines are organized  
14 for the most part to employ helpers, tradesmen  
15 and master tradesmen or foremen. Veterans are  
16 taken on and paid full rates according to their  
17 ability. Some have presented their Army trades  
18 classification certificates which were accepted  
19 at their face value and they were employed in  
20 the equivalent civilian grade. The employers  
21 all express themselves as well satisfied with the  
22 trades qualifications of all veterans professing  
23 any trade and also with their aptitude, responsible  
24 attitude and willingness to work as well as their  
25 discipline.

26 The mines were finding it difficult to find  
27 veterans willing to work underground. It takes  
28 four years to make a first class miner most of  
29 whom have been drawn in the past from foreign born  
30 immigrants. They are now averaging forty-five  
years of age. No Canadians are coming forward in  
any numbers to take their places.

1 veterans wherein they will have underground  
2 experience which, according to all witnesses  
3 heard, is by far the best way of training a  
4 miner. It is also learned that some of the mines  
5 are making arrangements to start their own under-  
6 ground schools (Noranda, Sullivan etc.).

7 Some evidence as to the pay given to miners  
8 showed that a beginner was given at least \$5.50  
9 per day. An experienced miner will earn, with  
10 production bonus in addition to his basic pay  
11 from \$9.00 to \$12.00 per day.

12 One witness stated that he had found veterans  
13 unwilling to go underground, even those who had  
14 been employed prior to the war in that type of work.  
15 This was attributed by the witness to the desire  
16 of the veteran to utilize such trade training as  
17 he might have received in the Services. Vacancies  
18 for tradesmen were not as numerous as for miners,  
19 as tradesmen had been recruited throughout the  
20 war and most of them were still available in the  
21 District. On the other hand witnesses from  
22 Noranda stated they had encountered no unwilling-  
23 ness on the part of either veterans reinstated or  
24 those new to the district to go underground. This  
25 was in part attributed by the officials of  
26 Noranda to the generous treatment accorded its  
27 employees in respect to pensions, medical attention  
28 etc.

29 Considerable attention was given by the  
30 Commission to the possibility of prospectors'  
courses for veterans. Dr. Price, Chief Geologist  
of Noranda Mines, Mr. Richan, another geologist,  
himself a naval veteran, and Mr. Germain of  
Amos, a leading prospector, were all asked for

1 advice on the subject. They took the view that  
2 courses for prospectors should be given in this  
3 area and not in or near populated centres and  
4 that the Mine Ecole might be utilized as a centre.

5 The Commission is convinced that there are  
6 extraordinary opportunities open to veterans in  
7 this district to obtain highly remunerative em-  
8 ployment under good working conditions and also  
9 to improve their productive capacity and value  
10 by further training and study in courses referred  
11 to elsewhere in the report.

#### 12 VETERANS' LAND ACT.

13 More than once during the sessions at Val  
14 d'Or the Commission was informed that there was  
15 difficulty in applying the Veterans' Land Act.

16 (a) So far as the acquisition of farms was con-  
17 cerned, most of the land available was Crown land  
18 of the Provincial government and farms were not  
19 being acquired for this reason. With respect  
20 to this, it was pointed out by the Commission  
21 that P.O. 2122, 1945, provides for agreements  
22 with the provinces for the settlement of veterans  
23 on provincial lands and grants for one or more  
24 of the following purposes:-

- 25 (a) For the purchase of essential  
26 building materials and other  
27 costs of construction.
- 28 (b) For the clearing and other pre-  
29 paration of land for cultivation.
- 30 (c) For the purchase of essential farm  
livestock and machinery.
- (d) For the purchase of machinery or  
equipment essential to forestry.
- (e) For the purchase of commercial  
fishing equipment.

1 (e) For the purchase of commercial  
2 fishing equipment.

3 (f) For the purchase of trapping  
4 or fur farming equipment, but  
5 not breeding stock.

6 (g) For the purchase of essential  
7 household equipment.

8 (b) The Commission was informed that small  
9 holdings cannot be acquired in city limits by  
10 reason of the cost and taxation. In view of the  
11 fact that representatives of the Municipality  
12 of Val d'Or and of the Noranda Mine pointed out  
13 that there was plenty of space within city  
14 limits in which small holdings could be establish-  
15 ed with adequate facilities, the point appears  
16 worthy of further examination.

17 It is the concensus of opinion that farmers  
18 and market gardeners are an immediate necessity  
19 for this area. At the moment there are none. It  
20 is stated that the land is arable and highly  
21 productive and that there are many areas suitable  
22 for developments of this nature.

23 This factor is important not only for  
24 the veterans who are here prejudiced in the exercise  
25 of their rights to apply for assistance in  
26 establishing a home and for agricultural education,  
27 but also from the point of view of the general  
28 development of the area. It is believed further-  
29 more that the plan of the Forest Village being  
30 organized by the Dept. of Lands and Forests of  
the Province of Quebec is admirably suited for  
this District where there are vast stands of  
timber which could be made accessible.

(c) A further difficulty was caused by a ruling

Vertical text or markings along the right edge of the page, possibly a page number or reference code.

Vertical text or markings along the far right edge of the page, possibly a page number or reference code.

1 which was said to have been made that veterans  
2 could not use the rehabilitation credit provided  
3 for by Section 9 of Part II of the Veterans'  
4 Land Act, for construction on land held under  
5 Emphyteutic lease. Evidence was received (1) that  
6 a great many lots in the Val d'Or area are held  
7 on Emphyteutic lease of 99 years term and (2)  
8 that the lessee under a Emphyteutic lease in the  
9 Province of Quebec has under the law of that  
10 Province every right of an owner so long as the  
11 lease exists.

11 COMMUNICATIONS.

12 The Commission heard from many witnesses the  
13 need for more lines of communication into the  
14 District. This was required in order to open up  
15 the many rich forest lands which have<sup>not</sup> been touched  
16 as well as for the development of new mines, and  
17 following such development new farming lands.

18 The residents mentioned the possibility of  
19 opening up a new national or provincial park to the  
20 south of this area. It was stated that not only  
21 were there good park lands but that the country was  
22 rich in hunting and fishing potentialities. This  
23 in turn would encourage the establishment of camps  
24 and hotels in which veterans would find a profitable  
25 source of living as owners, guides or employees,  
26 as well as contributing to the development of the  
27 area (V. Subsection VII, para. 6) Veterans  
28 counselled in such directions must be provided  
29 with instruction.

30 It was also stated that large timber limits  
were available to the north of this area to James  
Hay. In order to swell the narrow belt of population  
stretching from east to west in Canada, it is

1 absolutely necessary that the country stretch-  
2 ing to the North be developed. It is axiomatic  
3 that lines of communication be opened in order  
4 to encourage population in those parts which  
5 as yet remain undeveloped. It is the opinion  
6 of the Commission that the area of North-  
7 Western Quebec lends itself admirably to a  
8 development of this nature, and that it will  
9 provide a source of livelihood for veterans as  
10 well as contribute to the general economic  
11 welfare of the country as a whole.

12 The very large number of veterans who have  
13 had experience in road work, use of bulldozers  
14 and graders are, as mentioned in the Second Report,  
15 qualified for such work.

16 RECOMMENDATION NO. 101.

17 Operation of Veterans' Land Act.

18 The Commission recommends:

- 19 (a) That veterans who are engaged in  
20 training on the job or following  
21 courses in the Northern Quebec  
22 mining area be permitted to utilize  
23 any balance of rehabilitation credit  
24 in constructions on land held under  
25 Emphyteutic lease.
- 26 (b) That since, as was pointed out else-  
27 where in this report, it is difficult  
28 to find farms elsewhere in the Province  
29 at a low enough price to make them  
30 available under the Veterans' Land  
Act, an arrangement be entered into  
with the Province of Quebec under

d

1 P.C. 2122, 1945, for the acquisition  
2 of land by or for veterans qualified  
3 so that Orders-in-Council P.C. 2122  
4 and 2227 may be applicable.

5 (c) That in view of the very large number  
6 of persons applying for small holdings,  
7 a special Committee be set up to  
8 study the general possibility of  
9 acquiring small holdings within or  
10 without town limits and of furnishing  
11 the necessary agricultural education  
12 to veterans taking such holdings.

13 RECOMMENDATION NO. 102.

14 Rehabilitation Centre at Amos.

15 The Commission recommends:

16 That there be established at the  
17 earliest possible date at Amos as  
18 being a central point a complete re-  
19 establishment centre including re-  
20 presentatives of

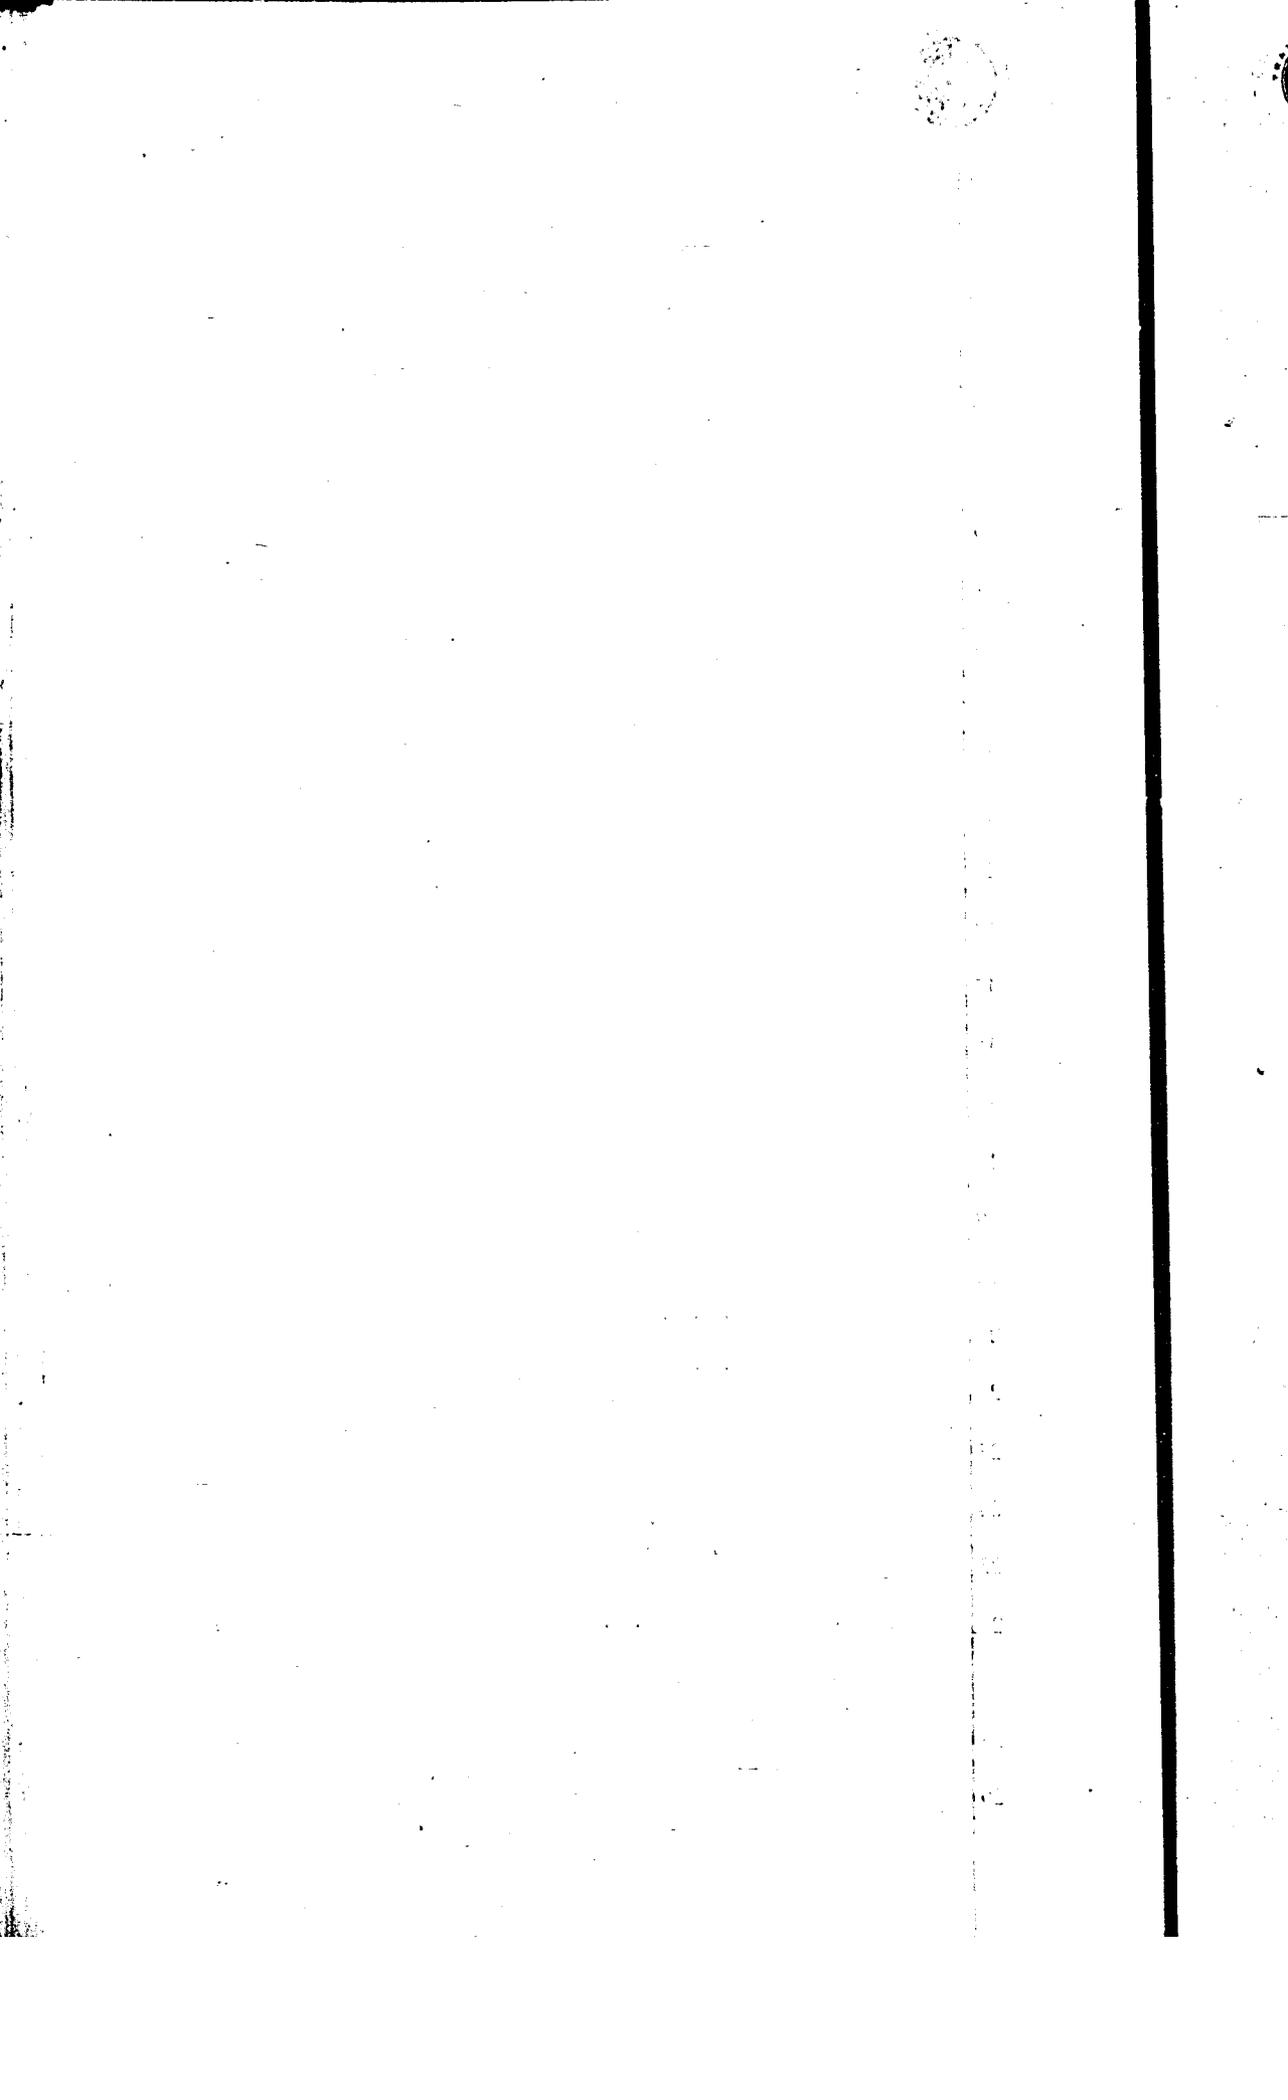

21 D.V.A. (including S.M.O.)

22 C.V.T.

23 National Employment Service

24 This office should have the same status as any  
25 employment centre. The D.V.A. officer should  
26 have at least two assistants who could act both  
27 for D.V.A. and C.V.T.

28 (It was suggested to the Commission that the  
29 senior medical officer should have several re-  
30 presentatives throughout the area).

RECOMMENDATION NO. 103

Vocational Schools for Veterans - Mining Area.

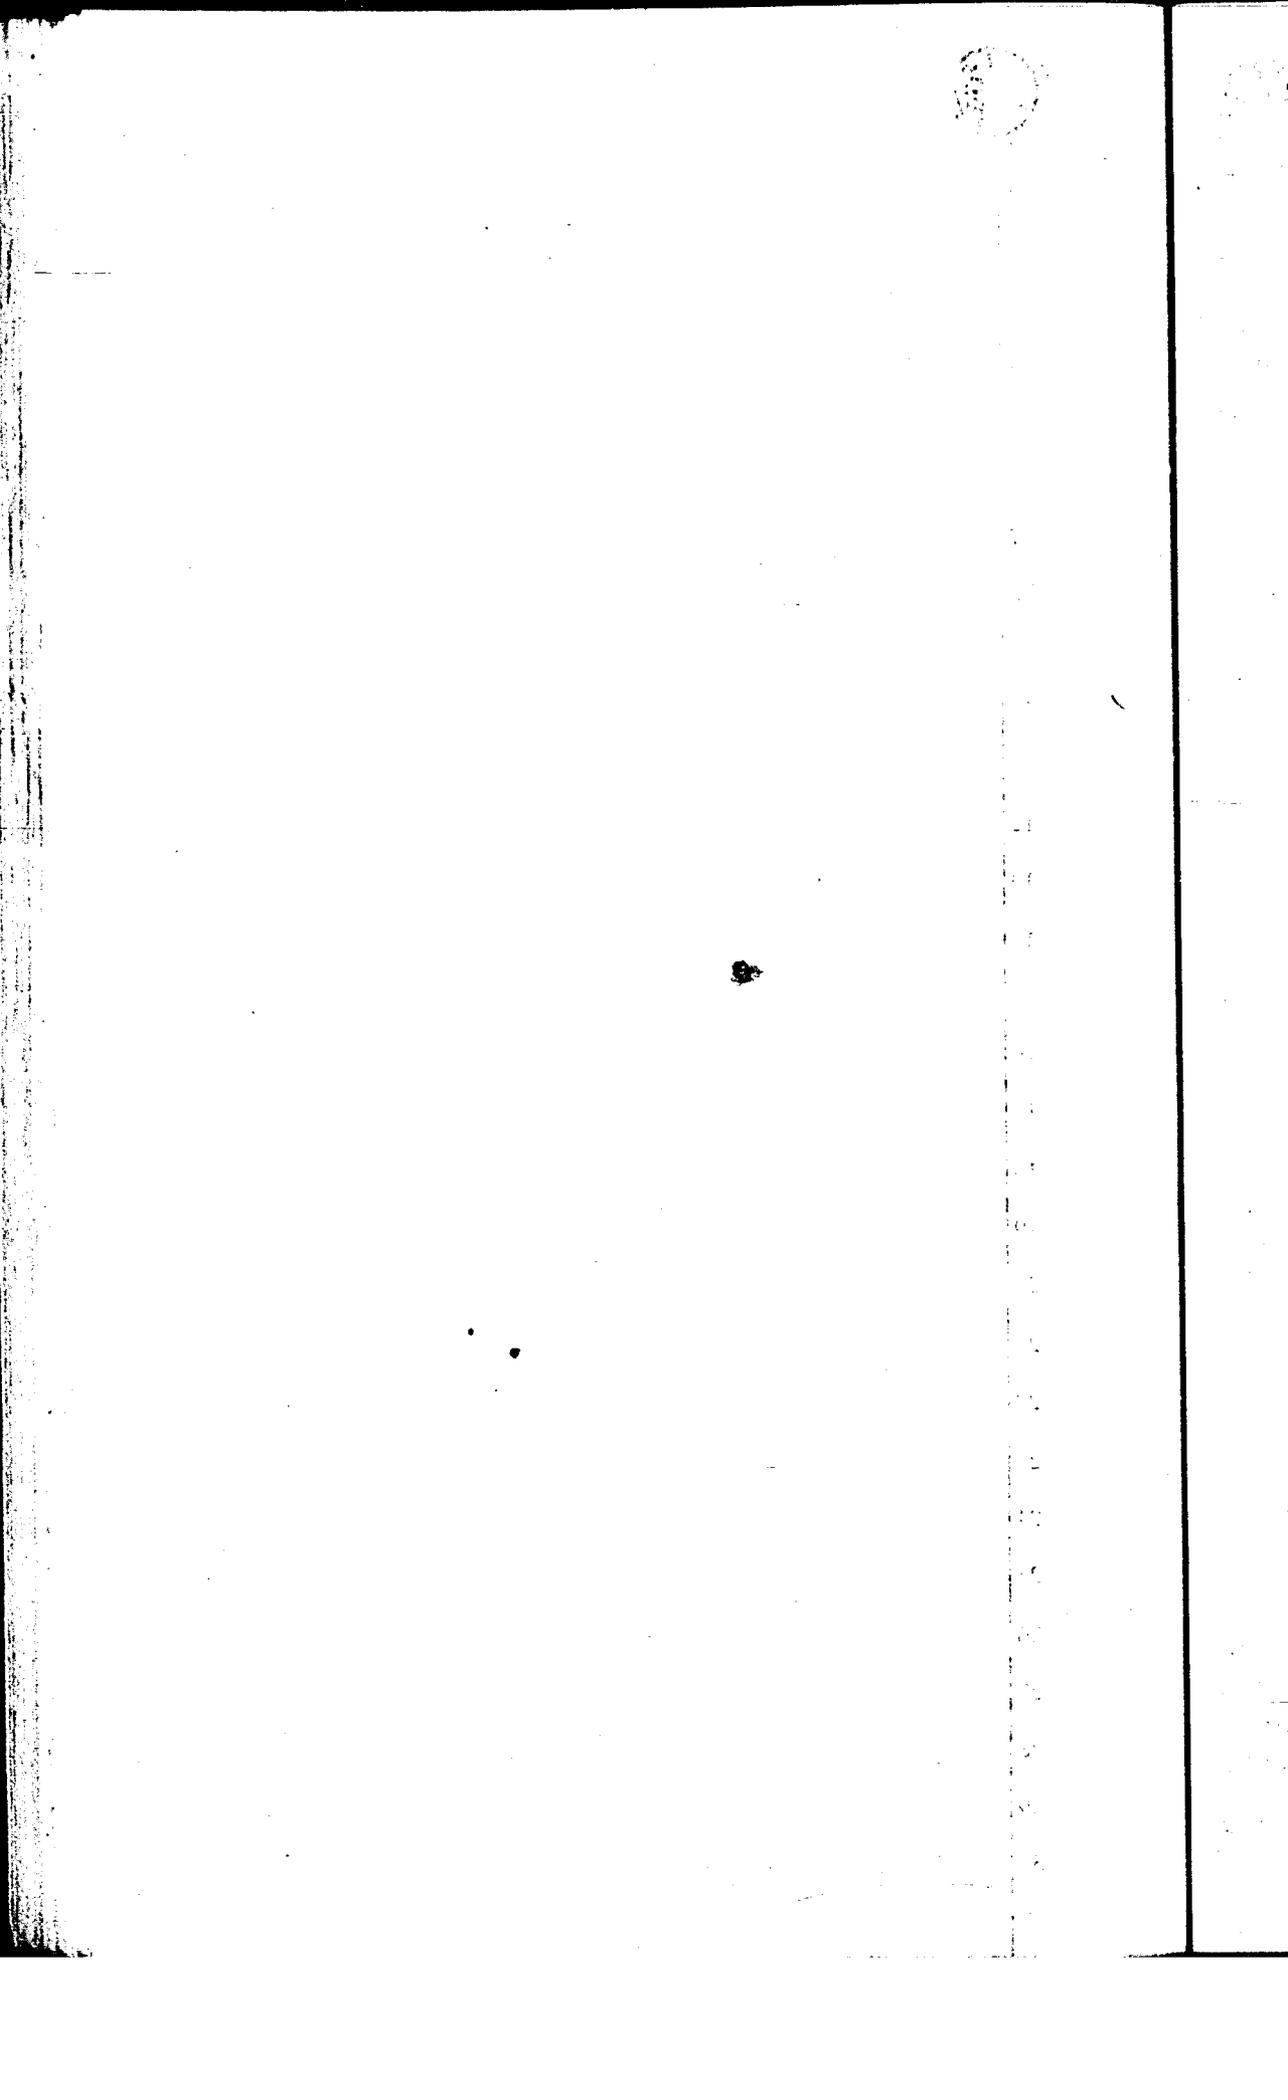

The Commission recommends:

(a) That steps be taken immediately to provide for this area vocational schools which are urgently needed.

Such schools should have facilities and curriculum that will give training to veterans so as to aid in their full rehabilitation by imparting skills in trades and various work of their choice. The schools should give a thorough training in all the related fields of knowledge as well as a thorough grounding in the elements of various phases of work which the veteran may choose.

Courses could very well have a scientific approach so as to be a preparation for further training in schools of higher learning. To this end the whole undertaking should be based on the principle of expanding objectives so that all those of talent and ambition would have available instruction at the Technical Institute level.

(b) That a thorough and immediate study of the whole problem as peculiar to this area, having in mind the distribution of population, possible growth and the nature of the needs so as to reach a scientific solution of the matter be made without undue delay. All present facilities such as the Mine School at

RECOMMENDATION NO. 104.

Prospectors' Courses.

The Commission recommends:

That arrangements be made for the  
establishment in the Northern Quebec  
mining area during the summer of  
prospectors' courses for veterans,  
each course to include about ten or  
twelve veterans with a practical  
geologist or experienced prospector  
as leader.
