Canadian Data Report Of Hydrography and Ocean Sciences

These reports provide a medium for the documentation and dissemination of data in a form directly useable by the scientific and engineering communities.

Generally, the reports will contain raw and/or analyzed data but will not contain interpretations of the data. Such compilations will commonly have been prepared in support of work related to the programs and interests of the Ocean Science and Surveys (OSS) sector of the Department of Fisheries and Oceans.

Data Reports are produced regionally but are numbered and indexed nationally. Requests for individual reports will be fulfilled by the issuing establishment listed on the front cover and title page. Out of stock reports will be supplied for a fee by commercial agents.

Regional and headquarters establishments of Ocean Science and Surveys ceased publication of their various report series as of December 1981. A complete listing of these publications and the last number issued under each title are published in the *Canadian Journal of Fisheries and Aquatic Sciences*, Volume 38: Index to Publications 1981. The current series began with Report Number 1 in January 1982.

Rapport statistique canadien sur l'hydrographie et les sciences océaniques

Ces rapports servent de véhicule pour la compilation et la diffusion des données sous une forme directement utilisable par les scientifiques et les techniciens.

En général, les rapports contiennent des données brutes ou analysées mais ne fournissent pas d'interprétations des données. Ces compilations sont préparées le plus souvent à l'appui de travaux reliés aux programmes et intérêts du service des Sciences et Levés océaniques (SLO) du ministère des Pêches et des Océans.

Les rapports statistiques sont produits à l'échelon régional mais sont numérotés et placés dans l'index à l'échelon national. Les demandes de rapports seront satisfaites par l'établissement auteur dont le nom figure sur la couverture et la page de titre. Les rapports épuisés seront fournis contre rétribution par des agents commerciaux.

Les établissements des Sciences et Levés océaniques dans les régions et à l'administration centrale ont cessé de publier leurs diverses séries de rapports depuis décembre 1981. Vous trouverez dans l'index des publications du volume 38 du *Journal canadien des sciences halieutiques et aquatiques*, la liste de ces publications ainsi que le dernier numéro paru dans chaque catégorie. La nouvelle série a commencé avec la publication du Rapport n° 1 en janvier 1982.

ABSTRACT

Dobson, D. and Petrie, B. 1984. Long-term temperature monitoring program 1983, Newfoundland Region. Can. Data Rep. Hydrogr. Ocean Sci. 21: vi + 411 p.

Temperature data collected in 1983 near the bottom at sites of productive fisheries in coastal areas of Newfoundland are presented.

RÉSUMÉ

Dobson, D. and Petrie, B. 1984. Long-term temperature monitoring program 1983, Newfoundland Region. Can. Data Rep. Hydrogr. Ocean Sci. 21: vi + 411 p.

On présente les données relatives à la température recueillies, en 1983, à proximité du fond aux endroits où la pêche est productive.

1. INTRODUCTION

A pilot program to obtain continuous long term measurements of bottom temperature in the Scotia-Fundy and Gulf region was initiated in March 1978, primarily at the request of biologists from the St. Andrews Biological Station. Their studies indicate that water temperature has a significant influence on the growth and feeding activity of commercial invertebrates (lobster, crab and scallops). The results of the 1978 observations and data from following years are contained in Bedford Institute data reports and may be obtained from Des Dobson (Atlantic Oceanographic Laboratory, Bedford Institute of Oceanography Dartmouth, N.S.).

Temperature records have been collected in the Newfoundland region since at least 1967 and are also found in B.I.O. data reports. We present the data gathered during the 1983 field season from Newfoundland coastal area.

2. INSTRUMENTATION

The Ryan Model J thermograph has been used in the program and is described by Gregory and Dobson (1978). Site selection and mooring deployment are handled by the fisheries lab in St. John's. The Atlantic oceanographic Lab has been servicing and calibrating the instruments, digitizing and plotting the data, and making elementary calculations. Many of the Newfoundland sites are diver serviced in relatively sheltered areas.

3. MOORING SITES, DATA RETURN AND PROCESSING

The mooring sites have been divided into three areas: 1) Scotia-Fundy, 2) Gulf, 3) Newfoundland. The length of the report has required it to be divided into 2 parts with this one covering the Newfoundland region.

Tables for the mooring locations, with the corresponding area map, follow. Site names, instrument serial numbers, depths, co-ordinates, data length and location are recorded in the tables when available. Instrument loss or failure is shown in the same format using start-stop time space for remarks.

All data reduction, plotting and calculations were contracted out to Evans Computer Applications Ltd. The analogue charts were digitized every 4 hours to the nearest 0.5°C and calculations are based on these data. The calculations included daily mean temperatures and the accumulated degree days (ADD) starting with the beginning of the record. Reference temperatures, T(ref), of 0°C and 4°C were used. The first and last calculations generally include partial days (prorated to full days) depending on the time the moorings were set and recovered.

We have: $ADD = \sum(T - T(\text{ref})) \times \text{time}$ where for $T < T(\text{ref})$, $T - T(\text{ref}) = 0$ and time is given in days. Table 3 gives a summary of the data return and some of the problems encountered during the field season. Table 4 gives the monthly degree calculations relative to 0°C (dividing by the number of days in a month will give the approximate average monthly temperature).

Instrument recoveries do not always coincide with the calendar year, as in the case of instruments presumed lost and later recovered. Thus, the data reported here include time series from earlier years.
