The Wild Side

Mighty Moose

I bet you've dreamed of spotting this mythical creature in the wild. At 2 metres in height, it's the largest of our antlered mammals. This king of the forest can be seen in our national parks across the country, however populations are abundant in Gros Morne and Cape Breton Highlands National Parks.

Salmon

Salmon found in the inner Bay of Fundy are a unique population of Atlantic salmon. They relocate to their native rivers by scent. A species at risk, they cannot be fished (or eaten!). However, you can join us at Fundy National Park and Snorkel with Salmon for Science.

Turtle Crossing

Upon your arrival in Kejimikujik National Park, you will be greeted by many road signs featuring turtles. No one knew that the Blanding's turtle even existed in Nova Scotia until 1953. They're considered a relic from a time when the climate was warmer. How many of the park's 3 species of turtles can you spot during your stay?

Splashing Seals

In Sable Island National Park Reserve, you'll find the largest colony of grey seals in the world. Although quite unbalanced on land, they are very agile in the water. Weighing in at up to 450 kg and measuring up to 3 metres in length, we guarantee you'll be blown away when you spot them in Kouchibouguac National Park.

Lobster

A relative of the shrimp and crab, our 10-legged friend can live up to 50 years or more. However, it must shed its shell in order to grow. Although found in the waters of all of the Atlantic Provinces, the largest one was caught off the coast of Nova Scotia. Imagine a 40 lb lobster on your dinner plate!

Give these animals the space they need. Your responsible behaviour contributes to the survival of wildlife – and your own safety!
