

- Preface/Préface — M.D. Everell
- Summary/Sommaire — S.R. Dallimore, T.S. Collette, T. Uchida

## PROJECT OVERVIEW

- Overview of science program, JAPEX/JNOC/GSC Mallik 2L-38 gas hydrate research well — S.R. Dallimore, T.S. Collett, and T. Uchida
- Drilling operations, JAPEX/JNOC/GSC Mallik 2L-38 gas hydrate research well — T. Ohara, S.R. Dallimore, and E. Fercho

## REGIONAL OVERVIEW

- Regional gas hydrate occurrences, permafrost conditions, and Cenozoic geology, Mackenzie Delta area — S.R. Dallimore and T.S. Collett
- Review of ground temperatures in the Mallik field area: a constraint to the methane hydrate stability — J.A. Majorowicz and S.L. Smith

## CORE STUDIES — GEOLOGY AND BIOSTRATIGRAPHY

- Sedimentology of gas hydrate host strata from the JAPEX/JNOC/GSC Mallik 2L-38 gas hydrate research well — K.A. Jenner, S.R. Dallimore, I.D. Clark, D. Paré, and B.E. Medioli
- Micropaleontology of the JAPEX/JNOC/GSC Mallik 2L-38 gas hydrate research well — D.H. McNeil
- Dinoflagellate cysts from the JAPEX/JNOC/GSC Mallik 2L-38 gas hydrate research well — H. Kurita and T. Uchida
- Palynology, age, and paleoenvironmental interpretations from the JAPEX/JNOC/GSC Mallik 2L-38 gas hydrate research well — James M. White

## CORE STUDIES — PHYSICAL PROPERTIES

- Physical properties of sediments from the JAPEX/JNOC/GSC Mallik 2L-38 gas hydrate research well — W.J. Winters, S.R. Dallimore, T.S. Collett, T.J. Katsebe, K.A. Jenner, R.E. Cranston, J.F. Wright, F.M. Nixon, and T. Uchida
- Estimating in situ gas hydrate saturation from core temperature observations, JAPEX/JNOC/GSC Mallik 2L-38 gas hydrate research well — J.F. Wright, A.E. Taylor, S.R. Dallimore, and F.M. Nixon
- Petrophysical environment of sediments hosting gas hydrate, JAPEX/JNOC/GSC Mallik 2L-38 gas hydrate research well — T.J. Katsebe, S.R. Dallimore, T. Uchida, K.A. Jenner, T.S. Collett, and S. Connell

## CORE STUDIES — GEOCHEMISTRY

- Methane and carbon dioxide gas-generation kinetics, JAPEX/JNOC/GSC Mallik 2L-38 gas hydrate research well — L.R. Snowdon
- Gas composition and isotopic geochemistry of cuttings, core, and gas hydrate from the JAPEX/JNOC/GSC Mallik 2L-38 gas hydrate research well — T.D. Lorenson, M.J. Whiticar, A. Waseda, S.R. Dallimore, and T.S. Collett
- Pore-water geochemistry, JAPEX/JNOC/GSC Mallik 2L-38 gas hydrate research well — R.E. Cranston
- Isotope constraints on the origin of pore waters and salinity in the permafrost and gas hydrate core intervals of the JAPEX/JNOC/GSC Mallik 2L-38 gas hydrate research well — I.D. Clark, R. Matsumoto, S.R. Dallimore, B. Lowe, and J. Loop
- Microbial communities from core intervals, JAPEX/JNOC/GSC Mallik 2L-38 gas hydrate research well — F.S. Colwell, M.E. Delwiche, D. Blackwelder, M.S. Wilson, R.M. Lehman, and T. Uchida

## CORE STUDIES — GAS HYDRATE CHARACTERIZATION

- Occurrences and X-ray computerized tomography (CT) observations of natural gas hydrate, JAPEX/JNOC/GSC Mallik 2L-38 gas hydrate research well — T. Uchida, S.R. Dallimore, J. Mikami, and F.M. Nixon
- Summary of physicochemical properties of natural gas hydrate and associated gas-hydrate-bearing sediments, JAPEX/JNOC/GSC Mallik 2L-38 gas hydrate research well, by the Japanese research consortium — T. Uchida, R. Matsumoto, A. Waseda, T. Okui, K. Yamada, T. Uchida, S. Okada, and O. Takano
- Influences of grain size and salinity on pressure-temperature thresholds for methane hydrate stability in JAPEX/JNOC/GSC Mallik 2L-38 gas hydrate research-well sediments — J.F. Wright, S.R. Dallimore, and F.M. Nixon
- Properties of samples containing natural gas hydrate from the JAPEX/JNOC/GSC Mallik 2L-38 gas hydrate research well, determined using Gas Hydrate And Sediment Test Laboratory Instrument (GHASTLI) — W.J. Winters, I.A. Pecher, J.S. Booth, D.H. Mason, M.K. Relle, and W.P. Dillon
- Chemical and physical analysis of natural gas hydrate from the JAPEX/JNOC/GSC Mallik 2L-38 gas hydrate research well — C.A. Tulk, C.I. Ratcliffe, and J.A. Ripmeester
- Storage and handling of natural gas hydrate — C.A. Tulk, J.F. Wright, C.I. Ratcliffe, and J.A. Ripmeester
- Dissociation properties of natural gas hydrate from the JAPEX/JNOC/GSC Mallik 2L-38 gas hydrate research well by X-ray computerized tomography (CT) experiments — T. Uchida, J. Mikami, Y. Masuda, and T. Satoh

## DOWNHOLE GEOPHYSICS

- Well-log interpretation of gas-hydrate-bearing formations in the JAPEX/JNOC/GSC Mallik 2L-38 gas hydrate research well — M. Miyairi, K. Akihisa, T. Uchida, T.S. Collett, and S.R. Dallimore
- Detailed evaluation of gas hydrate reservoir properties using JAPEX/JNOC/GSC Mallik 2L-38 gas hydrate research well downhole well-log displays — T.S. Collett, R.E. Lewis, S.R. Dallimore, M.W. Lee, T.H. Mroz, and T. Uchida
- Amount of gas hydrate estimated from compressional- and shear-wave velocities at the JAPEX/JNOC/GSC Mallik 2L-38 gas hydrate research well — M.W. Lee and T.S. Collett
- Velocity analysis of vertical seismic profile (VSP) survey at JAPEX/JNOC/GSC Mallik 2L-38 gas hydrate research well, and related problems for estimating gas hydrate concentration — A. Sakai
- Vertical seismic profile (VSP) in the JAPEX/JNOC/GSC Mallik 2L-38 gas hydrate research well — R. Walia, Y. Mi, R.D. Hyndman, and A. Sakai

## REGIONAL GAS HYDRATE OCCURRENCES, PRODUCTION, AND CLIMATE-CHANGE CONSIDERATIONS

- Seismic- and well-log-inferred gas hydrate accumulations on Richards Island — T.S. Collett, M.W. Lee, S.R. Dallimore, and W.F. Agena
- Production potential of the Mallik field reservoir — D. Khairkhah, M. Pooladi-Darvish, P.R. Bishnoi, T.S. Collett, and S.R. Dallimore
- Modelling the thermal regime of permafrost and gas hydrate deposits to determine the impact of climate warming, Mallik field area — A.E. Taylor
