

QUARTER 3
1959

**CANADIAN
HOUSING
STATISTICS**

CENTRAL MORTGAGE & HOUSING CORPORATION

FOREWORD

Canadian Housing Statistics is a quarterly report providing information on the housing situation, particularly new house-building and mortgage lending activity.

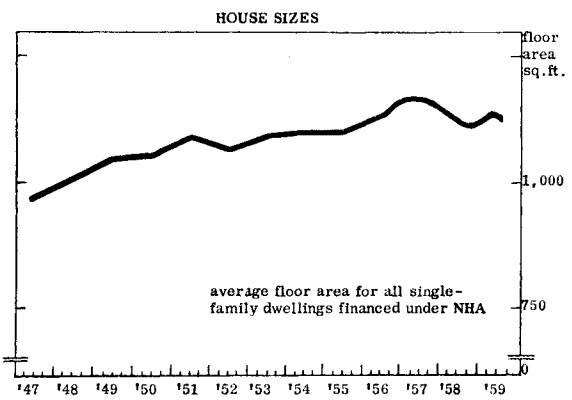

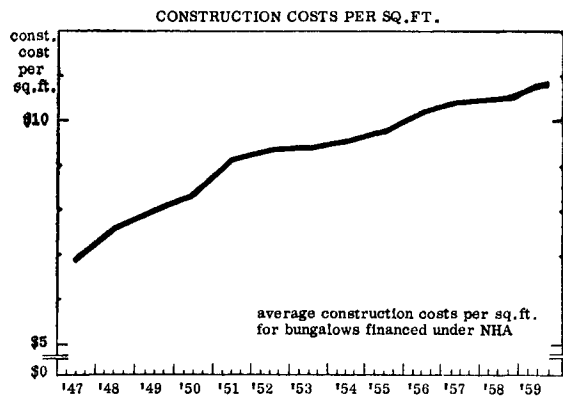

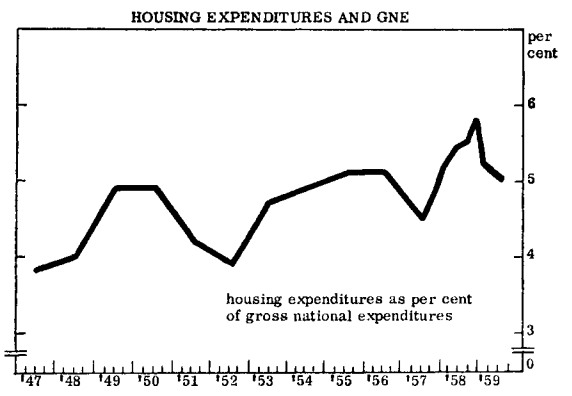

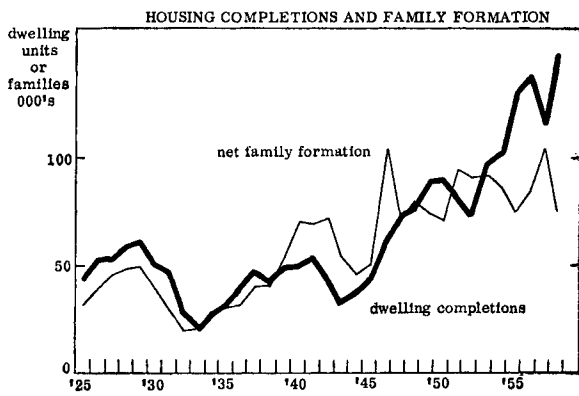

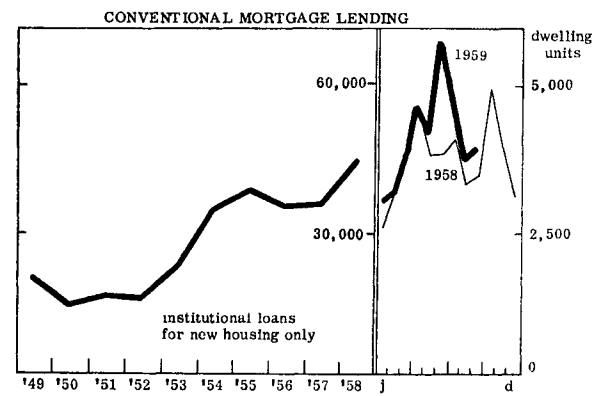

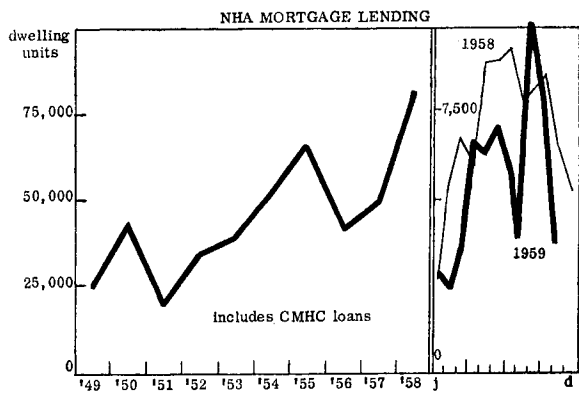

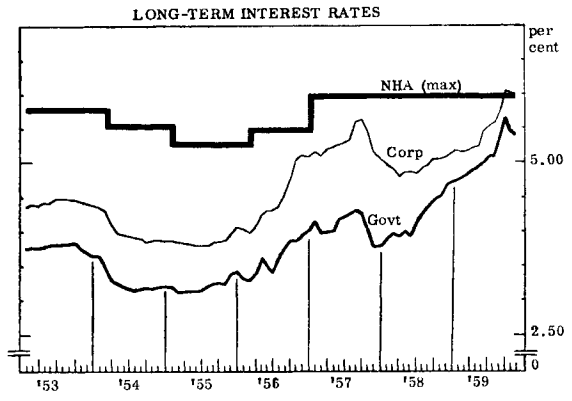

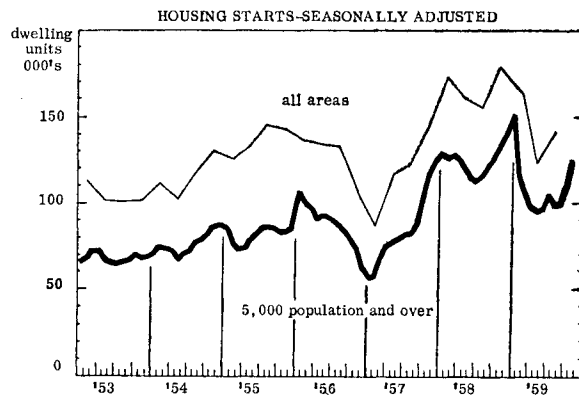

Comments and suggestions in respect of the contents of these reports will be welcomed.

**Economic Research Department,
Central Mortgage and Housing Corporation.**

Ottawa, December, 1959.

Costs of NHA Dwellings	29
Characteristics of NHA Dwellings	30

Summary

House-Building Activity

Starts in urban centres of 5,000 population and over increased in the fall of 1959 under the stimulus of direct mortgage loans to builders from CMHC. When allowance is made for seasonal factors, starts in these centres increased from a rate of 99,000 per year in September to 124,800 per year in November. This was the highest rate recorded since the decline in starts at the beginning of the year.

In the first eleven months of 1959, starts in these urban centres totalled 98,982 or 12.6 per cent below the 113,283 total for the corresponding period of 1958. The decline from the previous year occurred in all regions except the Atlantic region which showed an increase of 13.5 per cent. The largest decline was in British Columbia where starts were down by 21 per cent.

Completions in the urban centres, at 98,131 in the first eleven months of 1959, were little changed from the previous year. These dwellings were readily absorbed by the market so that, in the larger centres, the inventory of completed but unoccupied houses and duplexes showed little change. At the beginning of the year the inventory comprised 3,213 dwellings while at the end of November, 1959, it was 3,258 dwellings.

Mortgage Lending

The institutional lenders continued to reduce their mortgage lending activity under the National Housing Act in the fall of 1959. Prompted by competing demands for funds for other purposes, and by rising interest rates, this reduction had been taking place since early in the year. By November the NHA loan approvals of these lenders related to only 362 dwelling units compared to 3,123 in November of 1958.

The conventional mortgage lending activity of the institutions increased. For the first nine months of the year these loans related to 36,921 dwelling units compared to 32,689 in the corresponding period of 1958.

On September 1st direct CMHC loans became available to builders for the first time in 1959. By the end of October applications were received for these loans relating to over 14,000 dwelling units. These, together with a marked increase in direct loans to owner-applicants, exhausted the \$1 billion authorization for direct lending under the National Housing Act. In total, for the first eleven months of the year, direct CMHC loan approvals related to 33,833 dwelling units, only slightly below the 35,094 total for the corresponding period of 1958.

Land and Building Costs

There was little change in construction costs in the third quarter of 1959. Under the National Housing Act the estimated cost per square foot for bungalows was \$10.83 compared to \$10.84 in the second quarter. Over the same period the index of prices of residential building materials showed a slight decline, from 130.5 in June to 129.7 in October. Land costs were also down slightly, from an average of \$2,601 per lot in the second quarter to \$2,443 in the third quarter.

Housing Legislation and Administration

Sufficient applications for direct CMHC loans had been received by October 30th to exhaust the \$1 billion authorized for such purposes. It was announced, therefore, that no further applications for these loans would be accepted after that date. Arrangements were also made to cancel direct loans, with certain exceptions, where construction had not started by the end of the year.

Effective October 1st, 1959, the rate of interest on loans to limited-dividend companies was raised from 5½ per cent to 5¾ per cent.

A NOTE ON HOUSING STATISTICS

In the last issue of Canadian Housing Statistics it was suggested that there was some under-reporting of house-building activity in the second quarter of 1959. The estimates for the third quarter of the year, which are now available, support that belief.

In the second quarter of this year a new sample survey of house-building activity was adopted for the areas outside the centres of 5,000 population and over. The unfamiliarity of the field enumerators with the new sample survey areas probably resulted in some under-counting but the main difficulty was in recognizing dwellings near to completion as still being under construction. This resulted in the under-counting first of the number of dwellings under construction at the beginning of the second quarter and then of the completions of those same dwellings during the quarter. It was to be expected that the under-counting would be mainly restricted to the second quarter.

On December 17th the Dominion Bureau of Statistics published an addendum to the September issue of "New Residential Construction" relating to this matter. The addendum included the following paragraph:

"Studies of this problem and corroborating evidence from other sources indicate that the Canada estimate of 92,333 new dwellings completed during the period January 1 to September 30, 1959, is underestimated by approximately 8,000. Accordingly the best estimate of the number of new dwellings completed in Canada during the first nine months of 1959 is 100,333."

This adjustment has been made to the total of dwelling completions shown in Tables 2, 6, and 10 of this publication.

HOUSE-BUILDING ACTIVITY

(1) Excludes Yukon and Northwest Territories.

(2) Seasonally adjusted.

(3) 1957 data not comparable with earlier years. As a result of the 1956 Census 36 centres were transferred to "5,000 population and over" mostly from "other urban".

(4) Eleven months ending.

(5) Includes an unallocated adjustment of 8,000 units. See note on page 6.

* Not applicable.

** Not available.

P. Preliminary.

Note: All metropolitan areas and urban centres with a population of 5,000 or more are enumerated completely each month. In other areas, estimates are based on a sample survey, conducted monthly to the end of 1958 and thereafter on a quarterly basis.

(1) Includes Crown companies and non-departmental agencies.

(2) Includes land improvement and supplementary buildings. Excludes land.

(3) Quarterly data estimated.

(4) In addition to outlays made directly by Federal Government departments, expenditures for provincial hospitals, provincial and municipal schools are also included. Other provincial and municipal expenditures are not included.

(5) These expenditures represent the construction component of the item "Government expenditures on goods and services" as defined in the National Accounts.

** Not available.

(1) Annual data are on a net basis i.e. they represent gross loans approved during the current year minus cancellations or alterations of mortgage loans whether initial approval was made during the year or in prior years and irrespective as to whether mortgage loans were paid out in full or in part. Monthly data are on a gross basis.

(2) Dwellings financed by these loans are subject to size or rental limitations. Includes the agency programme together with direct loans to builders and home-owners in centres of 55,000 population or more.

(3) Includes CMHC loans.

(4) Includes Yukon and Northwest Territories.

(1) With the exception of 1958, annual data on marriages show the actual number during the period; quarterly data show the number of registrations during the period, regardless of when the events actually occurred. For this reason, quarterly estimates of net family formation do not agree with annual estimates.

(2) Quarterly data estimated.

(3) Adjustments made to original estimates to reconcile with census results.

(4) Quarterly data include an allowance for divorces.

(5) As at the end of period.

(6) Annual data relate to June 1. Quarterly data relate to the beginning of March, June, September and December.

(7) With the exception of 1958, annual data show the actual number of births and deaths during the period; quarterly data show the number of registrations during the period, regardless of when the events actually occurred.

(8) Includes Yukon and Northwest Territories.

* Not applicable.

(1) Yearly data relate to month of June.

(2) Total less accrued net income of farm operators from farm production.

(3) Farm income is the net income received by farm operators from farm production. Non-farm income equals total income minus farm income.

(4) Annual figures based on mid-year population estimates.

(5) Total personal savings minus farm inventory change.

(1) Reported by employers with 15 or more employees.

(2) Includes retroactive wage payments to non-operating railway employees of about \$12 million.

(3) Includes five principal expenditures: property taxes, mortgage interest, repairs, replacement and insurance. The home-ownership index is combined with the rent index to produce the over-all shelter cost index.

(4) Includes fuel, electricity, home furnishings, supplies and services.

(5) Data for 1959 relate only to centres of 5,000 population and over.

(1) Estimated by loan applicants.

(2) Land cost data reflect the prices paid for lots. These prices vary with changing proportions of fully serviced, partially serviced and unserviced lots. In the case of serviced lots, prices also vary with changes in the method of financing as between municipal financing, where part of the cost is covered by local improvement charges, and full financing by builders or developers.

(3) From April 1, 1954, onwards the cost of oil burners is included in "Construction Costs". This change means that construction costs per square foot are not directly comparable between periods before and after 1954. The mortgage insurance fee is excluded from dwelling costs but is shown separately.

* Not applicable.

Total	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0

(1) Sale prices of houses purchased from builders and estimated costs of houses constructed by owners. The mortgage insurance fee is included.

(2) Single-family dwellings for which loans were approved either to builders or owner-applicants.

(3) The maximum size permitted for houses under the Small Home Loans arrangement is 1,300 square feet for dwellings with four bedrooms. The table above shows dwellings of larger size than this because basement space has been used for recreation or other 'living' purposes.
