\*Urban centres with a population of 10,000 + are included in the survey. Detailed reports are available for CMAs.

## Highlights

- Ontario vacancy rate inched higher to 2.4 per cent in fall of 2015, from 2.3 per cent one year ago.
- Fixed sample 2-bed apartment rents grew at a rate of 3.1 per cent this fall versus 2.1 per cent in the fall of 2014.
- Factors exerting upward pressure on vacancy rates include: slowing youth employment, declining net migration and more rental completions.
- Factors exerting downward pressure on vacancy rates include: increasing cost gap between owning and renting.

## Overview: Vacancy Rates Edge Higher

According to Canada Mortgage and Housing Corporation's (CMHC) Fall Rental Market Survey, Ontario vacancy rates<sup>1</sup> inched higher to 2.4 per cent in fall 2015 from 2.3 per cent in the fall of 2014. Vacancy rates moved higher for bachelor and two bedroom units while remaining stable for all other units. Rental demand fell short of increases in supply resulting in slightly higher vacancy rates.

Despite a slight increase in the provincial vacancy rate, nine of the 15 Ontario CMAs registered no statistically significant change in the vacancy rate. The sharpest increase in vacancy rates occurred in Thunder Bay, Hamilton and Kingston. The lowest vacancy rate was registered in Guelph (1.2%), Barrie (1.3%), and Toronto (1.6%) while the highest vacancy rates were registered in Thunder Bay (4.6%), Windsor (3.9%) and Peterborough (3.7%).

## Demand and Supply Factors Impacting Vacancy Rates

Several factors exerted upward pressure on vacancy rates. Ontario's labour market created fewer job prospects since last fall particularly for younger adults aged 15-24. While young adults aged 15-24 comprise a slightly smaller number of existing renter households than those aged 25-44, their propensity to rent is much higher and more sensitive to changing economic circumstances. Employment for this group contracted resulting in declining

rental demand. This was evidenced by occupancy rates which declined for the least expensive units in the province of Ontario which are most often in demand by younger renter households. Household formation depends on job growth. More jobs provide younger adults with the confidence to decouple from the family home and seek their own living accommodation. According to historical census data, a sizable number of young adults in Ontario have stayed home longer likely due to both educational considerations and job market conditions.

Another factor exerting upward pressure on purpose-built unit vacancies has been declining net international migration. International migration to Ontario has slowed in recent years and was a factor less supportive of rental demand. The decline was driven by both less immigration and fewer non permanent residents. According to census data, roughly two thirds of immigrants rent a home when first arriving in Ontario as they need time to establish job tenure and to accumulate savings to qualify for homeownership. Meanwhile, Ontario also registered declining non permanent residents which comprises workers on temporary visas and foreign students. Both groups, due to the temporary nature of their status, typically live in rental accommodation.

The cost gap between owning and renting a home in Ontario continued to increase resulting in fewer renters shifting to ownership housing in the fall of 2015. The rise in the cost gap was fuelled by mortgage carrying costs growing well in excess

of increases in average apartment rents. First time buyers aged 25-44 are sensitive to changing economic conditions. Most were unable to substitute into a lower priced home from rental accommodation or had difficulty saving enough for their down payment. Furthermore, employment prospects, particularly for households in typical first time buyer ages of 25-44, remained relatively unchanged over the past year – encouraging more households to remain in rental accommodation longer. This was evidenced by rental occupancy rates which increased for units charging rents that are in direct competition with ownership housing.

More competing supply pressures from both small and larger investors is another factor exerting upward pressure on vacancy rates over the past year. According to CMHC data, smaller investors have been quite active in recent years purchasing condo units in major markets primarily for investment purposes. CMHC and Statistics Canada census data indicates that the growth in new purpose-built rental supply has not kept pace with the growth in new renter households across the province. Condominium apartments have satisfied a large part of this excess demand as most of the growth in the Ontario rental stock has occurred in secondary rental units such as condominiums. Many of these condominiums purchased by investors in recent years reached the completion and registration phase in 2015 adding significantly more competing rental units to the rental market. Besides more condominium rental units, larger investors have also brought more purpose-built

---

<sup>1</sup> Based on privately-initiated rental apartments structures of three or more units.

units to market. Primary rental completions are up from this time last year. Low vacancy rates, an aging rental stock combined with higher yields compared to other competing investments are encouraging more investment in the primary sector. New competing rental units either registered as purpose-built or condominium charge above average market rents and represent more competition for pricier existing purpose built rental units

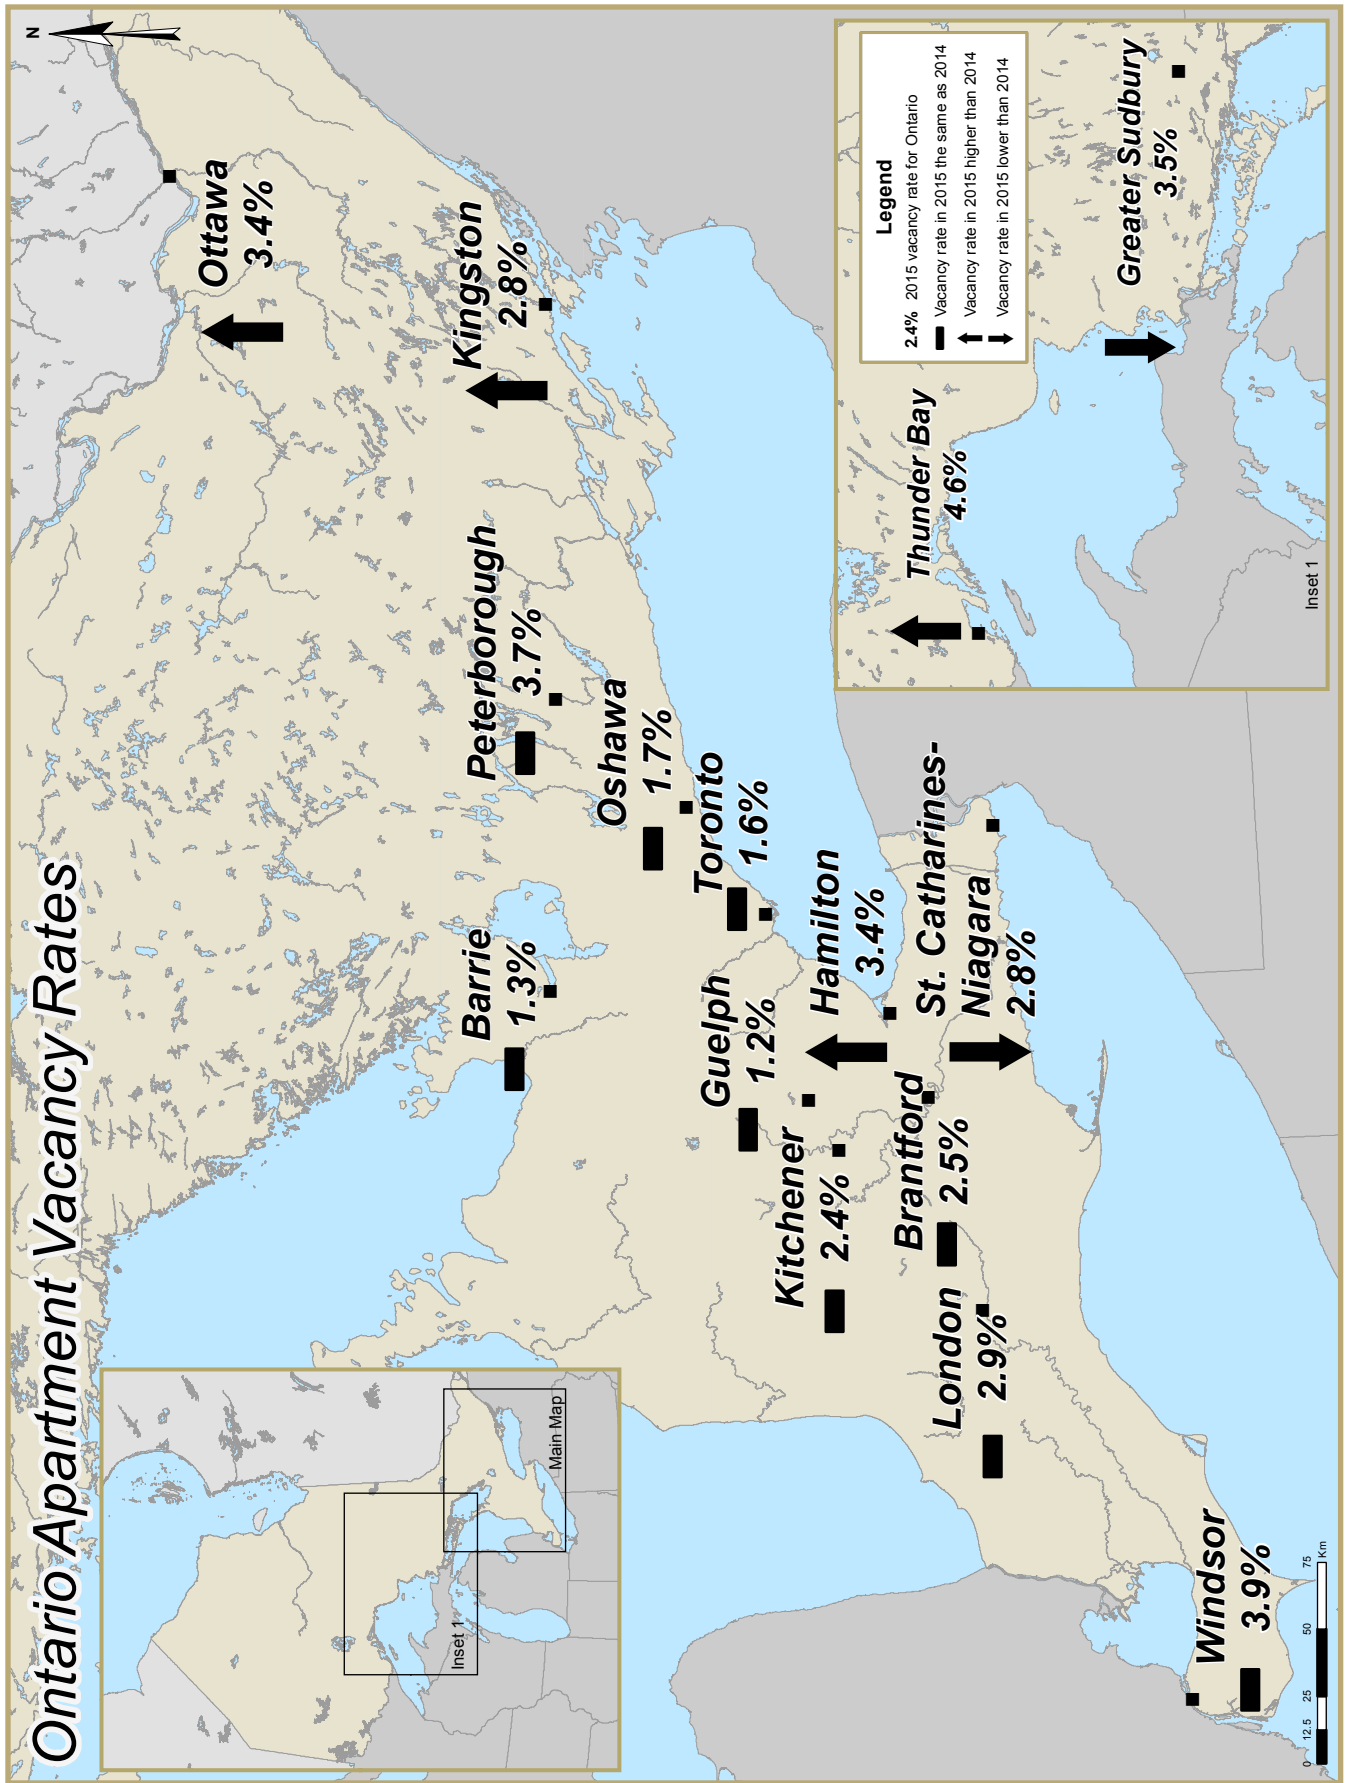

## **Ontario Same Sample Rents Grew by 3.1 Per Cent in Fall 2015**

Apartment rents for two bedroom units that were common to both 2014 and 2015 fall surveys<sup>2</sup> rose by 3.1 per cent versus a 2.1 per cent increase this time last year. Fixed sample 2-bedroom apartment rents grew the fastest in Brantford (4.1%), Hamilton (3.9%) and Toronto/Guelph (3.2%) while growing the slowest in Oshawa

(2.0%), Peterborough (2.2%) and London (2.3%). A higher allowable rent review guideline increase amount for 2015, stronger income growth and sharp increases in ownership prices supported stronger growth in apartment rents despite modestly higher vacancy rates across the province.

---

<sup>2</sup> When comparing year-over-year average rents, the age of the building needs to be taken into consideration because rents in newly-built structures tend to be higher than in existing buildings. By comparing rents for units that are common to both 2014 and 2015 fall rental market surveys, we can get a better indication of actual rent increases paid by most tenants.

## TECHNICAL NOTE:

*Difference between Percentage Change of Average Rents (Existing and New Structures) AND Percentage Change of Average Rents from Fixed Sample (Existing Structures Only):*

Percentage Change of Average Rents (New and Existing Structures): The increase/decrease obtained from the calculation of percentage change of average rents between two years (example: \$500 in the previous year vs. \$550 in current survey represents an increase of 10 percent) is impacted by changes in the composition of the rental universe (e.g. the inclusion of newly built luxury rental buildings in the survey, rental units renovated/upgraded or changing tenants could put upward pressure on average rents in comparison to the previous year) as well as by the rent level movement (e.g. increase/decrease in the level of rents that landlords charge their tenants).

Percentage Change of Average Rents from Fixed Sample (Existing Structures Only): This is a measure that estimates the rent level movement. The estimate is based on structures that were common to the survey sample for both the previous year and the current Rental Market Surveys. However, some composition effects still remain e.g. rental units renovated/upgraded or changing tenants because the survey does not collect data to such level of details.

## METHODOLOGY FOR RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts the **Rental Market Survey (RMS)** every year in April and October to estimate the relative strengths in the rental market. The survey is conducted on a sample basis in all urban areas with populations of 10,000 and more. The survey targets only privately initiated structures with at least three rental units, which have been on the market for at least three months. The survey collects market rent, available and vacant unit data for all sampled structures.

The survey is conducted by a combination of telephone interviews and site visits, and information is obtained from the owner, manager, or building superintendent. The survey is conducted during the first two weeks of April/October, and the results reflect market conditions at that time.

CMHC is constantly reviewing the Universe of rental structures in the rental market Universe to ensure that it is as complete as possible. Every year, any newly completed rental structures with at least 3 rental units are added to the Universe. In addition to this, CMHC undertakes comprehensive reviews by comparing the Universe listing to other sources of data to ensure that the list of structures is as complete as possible.

CMHC's Rental Market Survey provides a snapshot of vacancy and availability rates, and average rents in both new and existing structures. There also exists a measure for the change in rent that is calculated based on existing structures only. The estimate is based on structures that were common to the survey sample for both the previous year and the current Rental Market Surveys. The change in rent in existing structures is an estimate of the change in rent that the landlords charge and removes compositional effects on the rent level movement due to new buildings, conversions, and survey sample rotation. The estimate of per cent change in rent is available in all Canada and Provincial Highlights publications, and also in the CMA reports (fall survey only). The rent levels in new and existing structures are also published. While the per cent change in rents in existing structures published in the reports are statistically significant, changes in rents that one might calculate based on rent levels in new and existing structures may or may not be statistically significant.

Use caution when comparing statistics from one year to the next. Even if there is a year over year change, it is not necessarily a statistically significant change. When applicable, tables in this report include indicators to help interpret changes. ↑ indicates the year-over-year change is a statistically significant increase, ↓ indicates the year-over-year change is a statistically significant decrease, while – indicates that the effective sample does not allow one to interpret any year-over-year change as being statistically significant.

## METHODOLOGY FOR SECONDARY RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts a survey of the **Secondary Rental Market (SRMS)** in late summer and early fall to estimate the relative strengths in the secondary rental market which is defined as those dwellings not covered by the regular RMS – rented single-detached homes, semi-detached (double) homes, rented freehold row/townhomes, rented duplex apartments (i.e., one-above-other), rented accessory apartments (separate dwelling units that are located within the structure of another dwelling type), rented condominiums (can be any dwelling type but are primarily apartments), and one or two apartments which are part of a commercial or other type of structure.

The SRMS has three components which are conducted in selected CMAs:

- A Household Rent Survey of all households to collect information about rents in the following CMAs: Abbotsford, Barrie, Calgary, Edmonton, Halifax, Hamilton, Kelowna, Montréal, Ottawa, Québec, Regina, Saskatoon, St. Catharines-Niagara, St. John's, Toronto, Vancouver, Victoria, Windsor and Winnipeg.
- A Condominium Apartment Rent Survey of households living in condominium apartments to collect information about rents in the following CMAs: Calgary, Edmonton, Montréal, Ottawa, Québec, Toronto, Vancouver, Victoria and Winnipeg.
- A Condominium Apartment Vacancy Survey to collect vacancy information in the following CMAs: Calgary, Edmonton, Gatineau, Hamilton, Kelowna, Kitchener, London, Montréal, Ottawa, Québec, Regina, Saskatoon, Toronto, Vancouver, Victoria and Winnipeg.

All three surveys are conducted by telephone interviews. For the condominium apartment vacancy survey, information is obtained from the property management company or condominium (strata) board, or building superintendent and can be supplemented by site visits if no telephone contact is made. For the other two surveys, information is collected from an adult living in the household. All surveys are conducted in late summer and early fall, and the results reflect market conditions at that time.

CMHC publishes the number of units rented and vacancy rates from the condominium vacancy survey. For the condominium rent and household rent surveys, the average rent is published. A letter code representing the statistical reliability (i.e., the coefficient of variation (CV)) for each estimate is provided to indicate the data reliability.

Every year CMHC reviews the method of estimation for Household Rent Survey, which may result in some changes to previously published estimates. All statistics in this report are reflective of the new method of estimation.

## DEFINITIONS

**Availability:** A rental unit is considered available if the existing tenant has given, or has received, notice to move, and a new tenant has not signed a lease; or the unit is vacant (see definition of vacancy below).

**Rent:** The rent refers to the actual amount tenants pay for their unit. No adjustments are made for the inclusion or exclusion of amenities and services such as heat, hydro, parking, and hot water. For available and vacant units, the rent is the amount the owner is asking for the unit.

It should be noted that the average rents reported in this publication provide a sound indication of the amounts paid by unit size and geographical sector. Utilities such as heating, electricity and hot water may or may not be included in the rent.

**Rental Apartment Structure:** Any building containing three or more rental units, of which at least one unit is not ground oriented. Owner-occupied units are not included in the rental building unit count.

**Rental Row (Townhouse) Structure:** Any building containing three or more rental units, all of which are ground oriented with vertical divisions. Owner-occupied units are not included in the rental building unit count. These row units in some centres are commonly referred to as townhouses.

**Vacancy:** A unit is considered vacant if, at the time of the survey, it is physically unoccupied and available for immediate rental.

### **Definitions of Census Areas referred to in this publication are as follows:**

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

Data presented is based on Statistics Canada's 2011 Census area definitions.

### **Acknowledgement**

The Rental Market Survey and the Secondary Rental Market Survey could not have been conducted without the cooperation of the rental property owners, managers, building superintendents and household members throughout Canada. CMHC acknowledges their hard work and assistance in providing timely and accurate information. As a result of their contribution, CMHC is able to provide information that benefits the entire housing industry.

## CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for almost 70 years.

CMHC helps Canadians meet their housing needs. As Canada's authority on housing, we contribute to the stability of the housing market and financial system, provide support for Canadians in housing need, and offer objective housing research and information to Canadian governments, consumers and the housing industry. Prudent risk management, strong corporate governance and transparency are cornerstones of our operations.
