\*Urban centres with a population of 10,000 + are included in the survey. Detailed reports are available for CMAs.

## Vacancy rate rises in Quebec

- The average vacancy rate in privately initiated structures with three or more housing units in Quebec's urban centres reached 4.3 per cent in October.
- Between October 2014 and October 2015, the vacancy rate in Quebec rose by 0.6 of a percentage point, which was a statistically significant increase.
- Among the Quebec's six census metropolitan areas (CMAs), Montréal, Québec and Saguenay posted significant changes in their vacancy rates.
- Once again this year, market conditions tended to be tighter in the case of larger apartments.
- The average rent for two-bedroom apartments reached \$728, with the CMA averages varying between \$581 and \$788.

## Regional overview

According to the results of the Rental Market Survey conducted in October by Canada Mortgage and Housing Corporation (CMHC), the average vacancy rate in privately initiated structures with three or more housing units in Québec's urban centres (with 10,000 or more inhabitants) rose by 0.6 of a percentage point between October 2014 and October 2015, reaching 4.3 per cent.

Among the province's 44 urban centres, 40 per cent posted increases in their vacancy rates between the last two fall surveys. A similar share did not show any significant changes in vacancy rate, while, in 20 per cent of them, the rates registered decreases.

In Census Metropolitan Areas (CMAs), only the regions of Montréal, of Québec and of Saguenay posted significant increase in their vacancy rates between the last two October surveys. The variations recorded in the three other CMAs were not statistically significant.

For the other urban agglomerations, the October survey results revealed a slightly higher vacancy rate for all centres with 10,000 to 49,999 inhabitants (4.8 per cent from 4.5 per cent in 2014) as well as for agglomerations with 50,000 to 99,999 inhabitants (4.6 per cent from 4.1 per cent in 2014).

## Falling demand caused market conditions to ease

Again this year, demand for rental housing showed signs of slowing down across urban centres. Firstly, employment among young people aged from 15 to 24 continued its downward course over the

same period (October 2014 and September 2015), which contributed to limiting demand for rental housing. Secondly, on the demographic front, total net migration recorded another decrease during the same period.

Rental housing completions were also less numerous, a phenomenon that usually exerts downward pressure on vacancy rates, all things being equal otherwise.

Thus, despite lower supply, the decrease in demand was such that a slight easing in market conditions occurred over the past year.

The changes in supply and demand varied depending on the areas, as population movements, economic conditions and rental housing construction affected the results for each centre.

## Market segments

In Québec, the survey results revealed that the market is less tight for the segment comprised of smaller apartment. In fact, for all urban centres (with 10,000 or more inhabitants), the vacancy rates was 6.1 per cent in the case of bachelor units and decreased progressively as the number of bedrooms increased, reaching 3.7 per cent for apartments with three or more bedrooms.

In general, apartments with more bedrooms are appealing thanks to their versatility. They can be suitable for families with children, for people living alone who prefer more space, or for sharing between roommates. They are thus a more affordable substitute to other dwellings aimed at first time buyers (single and semi-detached houses and condominium apartments).

## Rents

For all urban centres in the province, the average rent for two-bedroom apartments stood at \$728 this past October. Overall, the size of agglomerations has a direct impact on rents. More specifically, the size of an urban centre influences the economic base, which, in turn, affects jobs and incomes and, consequently, the financial capacity of households and their housing choices. As a result, the average rents for two-bedroom apartments reached \$577 for census agglomerations (CAs) with 10,000 to 49,999 inhabitants, \$603 in the case of CAs with 50,000 to 99,999 inhabitants and \$748 for the CMAs. Among the CMAs, the lowest average rent was recorded in Trois-Rivières (\$581), while the highest was registered in the Québec area (\$788).

Between October 2014 and October 2015, the estimated change in the average rent for the province was 1.6 per cent. For the corresponding period a year earlier, the increase had reached 2.0 per cent. Given their relative weight in the universe of rental housing units in Québec overall, the CMAs showed a similar increase in rents this year (+1.7 per cent).

## Rental condominiums

Over the years, the rental condominium phenomenon has been growing across Canada's major metropolitan areas, and Québec's large centres were no exception. The survey of this secondary market, which was limited to Montréal and Québec, now includes the Gatineau region.

In the Montréal CMA, the proportion of condominiums offered for rent has progressively increased since 2011, rising from 13.3 per cent in 2014 to 14.8 per cent in 2015.

Over the past year, many condominium projects were completed in Montréal, increasing the supply of units that could potentially be rented on the market. This year, the vacancy rate for rental condominiums (3.0 per cent) was lower than the rate for the conventional rental market (4.0 per cent). This spread is evidence of the relative popularity of this product. It is likely that a share of renter households left their apartment for a rental condominium, thus contributing to the easing in the traditional market.

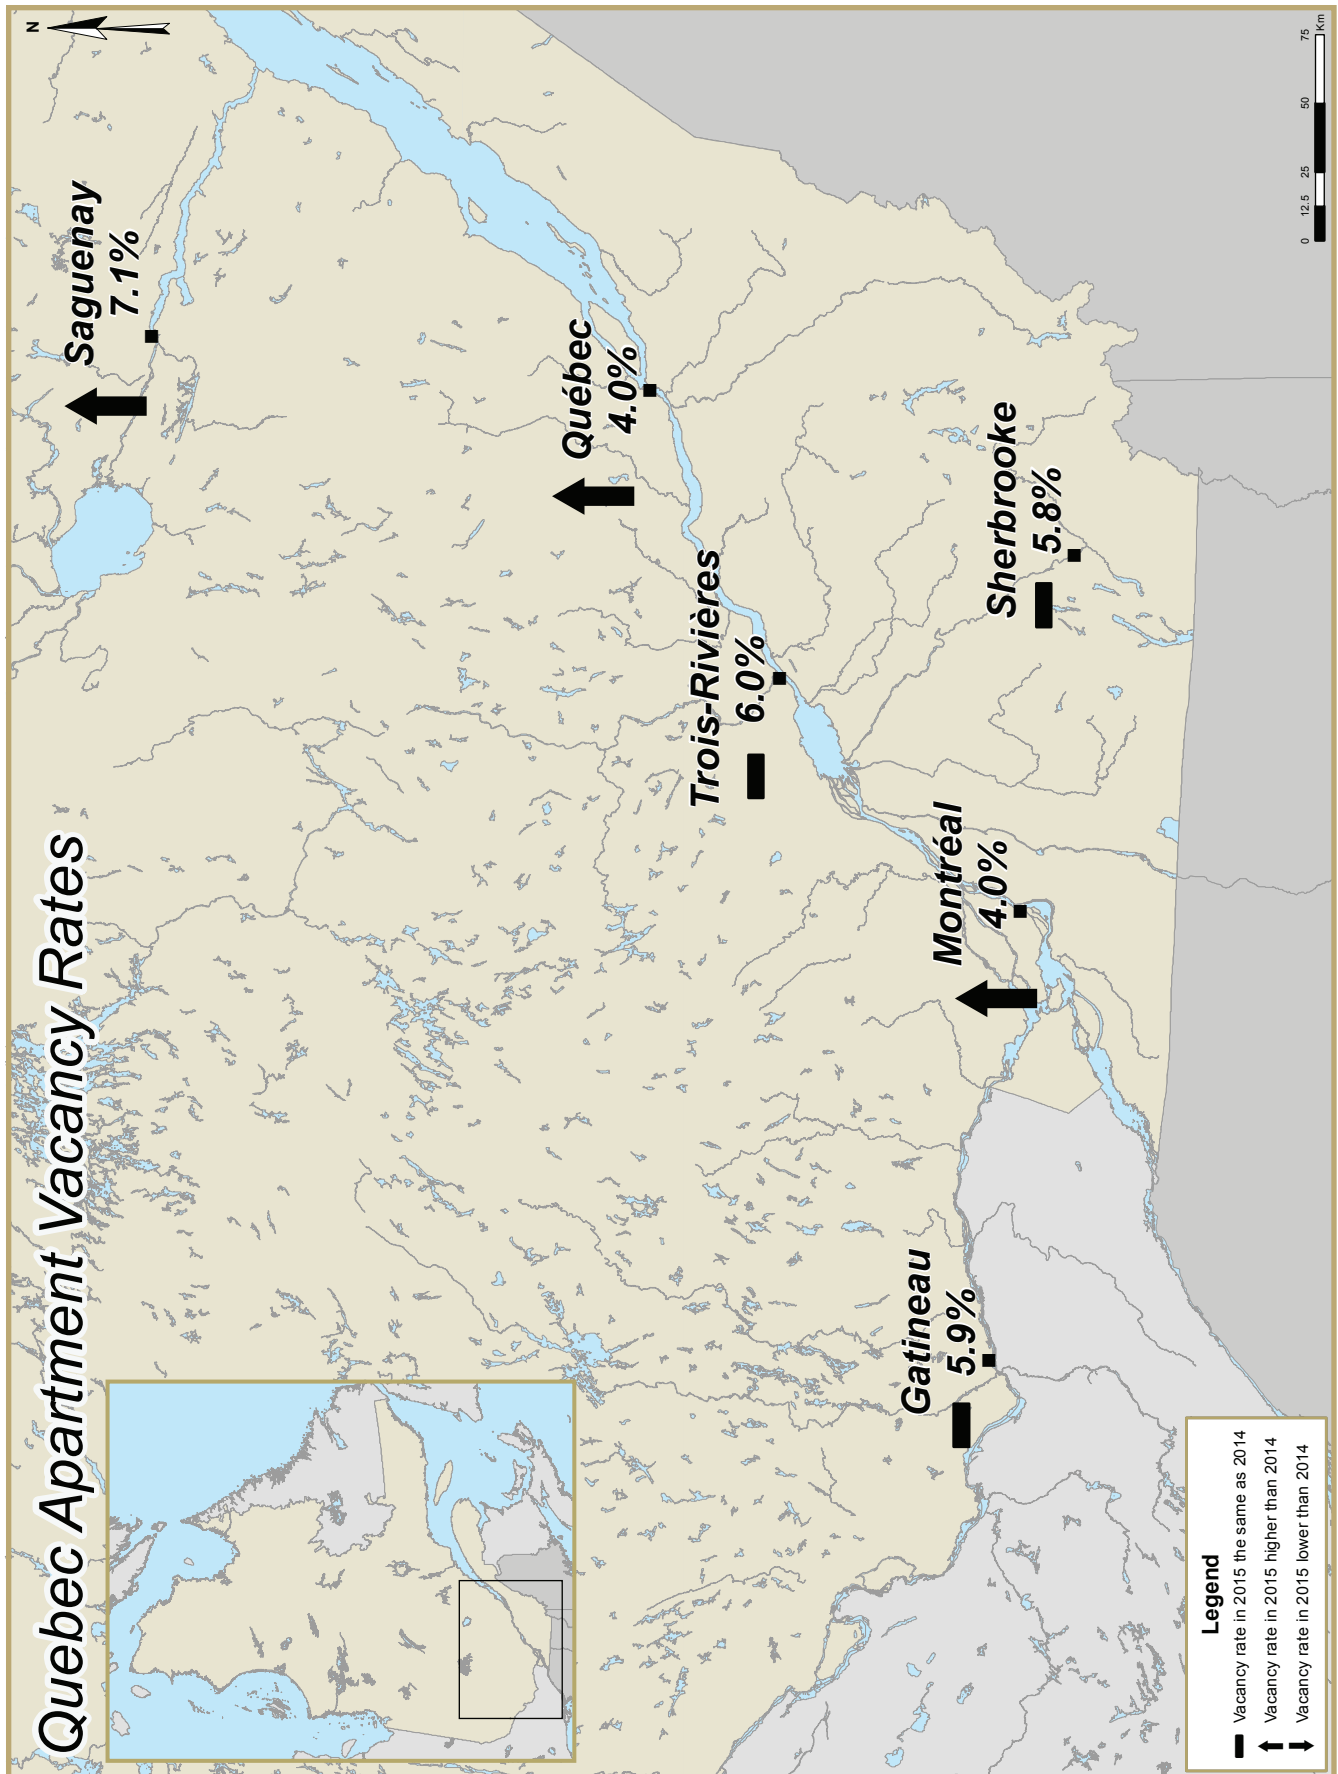

In the Québec CMA, the proportion of condominiums offered for rent also rose, reaching 11.3 per cent in October 2015, compared to 10.2 per cent in 2014. After having recorded a vacancy rate decrease

in 2014, which brought it to 3.2 per cent, the rental condominium vacancy rate climbed to 4.0 per cent this fall (the same rate recorded in the traditional market). While supply continues to grow in the Québec region, demand is not keeping up the same pace, which has caused the vacancy rate to rise somewhat.

Supply of rental condominiums stands out in the Gatineau CMA, as the rate was estimated at 30 per cent. This higher share is mainly explained by less tight market conditions in the new and resale markets. This situation evidently prompted builders and owners to resort to renting as they wait for buying conditions to return. According to the survey, this strategy bore fruit, as the vacancy rate for these units was estimated at 4.0 per cent in October 2015, a notably lower rate than that observed on the purpose built market (5.9 per cent).

As for the average rents, the gaps between the secondary and conventional rental markets are significant. In the Montréal CMA, the average rent for two-bedroom rental condominiums was \$1,140, or 50 per cent more than the average for purpose-built rental units of the same type. In the Québec CMA, the gap was approximately 35 per cent, and the average rent for rental condominiums reached \$1,065.

The rent difference between the rental condominium and conventional rental markets is partly due to the fact that the condominium stock is generally newer and higher end and offers a more complete range of specific amenities than conventional rental housing.

## TECHNICAL NOTE:

*Difference between Percentage Change of Average Rents (Existing and New Structures) AND Percentage Change of Average Rents from Fixed Sample (Existing Structures Only):*

Percentage Change of Average Rents (New and Existing Structures): The increase/decrease obtained from the calculation of percentage change of average rents between two years (example: \$500 in the previous year vs. \$550 in current survey represents an increase of 10 percent) is impacted by changes in the composition of the rental universe (e.g. the inclusion of newly built luxury rental buildings in the survey, rental units renovated/upgraded or changing tenants could put upward pressure on average rents in comparison to the previous year) as well as by the rent level movement (e.g. increase/decrease in the level of rents that landlords charge their tenants).

Percentage Change of Average Rents from Fixed Sample (Existing Structures Only): This is a measure that estimates the rent level movement. The estimate is based on structures that were common to the survey sample for both the previous year and the current Rental Market Surveys. However, some composition effects still remain e.g. rental units renovated/upgraded or changing tenants because the survey does not collect data to such level of details.

## METHODOLOGY FOR RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts the **Rental Market Survey (RMS)** every year in April and October to estimate the relative strengths in the rental market. The survey is conducted on a sample basis in all urban areas with populations of 10,000 and more. The survey targets only privately initiated structures with at least three rental units, which have been on the market for at least three months. The survey collects market rent, available and vacant unit data for all sampled structures.

The survey is conducted by a combination of telephone interviews and site visits, and information is obtained from the owner, manager, or building superintendent. The survey is conducted during the first two weeks of April/October, and the results reflect market conditions at that time.

CMHC is constantly reviewing the Universe of rental structures in the rental market Universe to ensure that it is as complete as possible. Every year, any newly completed rental structures with at least 3 rental units are added to the Universe. In addition to this, CMHC undertakes comprehensive reviews by comparing the Universe listing to other sources of data to ensure that the list of structures is as complete as possible.

CMHC's Rental Market Survey provides a snapshot of vacancy and availability rates, and average rents in both new and existing structures. There also exists a measure for the change in rent that is calculated based on existing structures only. The estimate is based on structures that were common to the survey sample for both the previous year and the current Rental Market Surveys. The change in rent in existing structures is an estimate of the change in rent that the landlords charge and removes compositional effects on the rent level movement due to new buildings, conversions, and survey sample rotation. The estimate of per cent change in rent is available in all Canada and Provincial Highlights publications, and also in the CMA reports (fall survey only). The rent levels in new and existing structures are also published. While the per cent change in rents in existing structures published in the reports are statistically significant, changes in rents that one might calculate based on rent levels in new and existing structures may or may not be statistically significant.

Use caution when comparing changes in statistics from one year to the next. Even if there is a year over year change, it is not necessarily a statistically significant change. These tables include indicators to help interpret changes. ↑ indicates the year-over-year change is a statistically significant increase, ↓ indicates the year-over-year change is a statistically significant decrease, while – indicates that the effective sample does not allow one to interpret any year-over-year change as being statistically significant.

## METHODOLOGY FOR SECONDARY RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts a survey of the **Secondary Rental Market (SRMS)** in late summer and early fall to estimate the relative strengths in the secondary rental market which is defined as those dwellings not covered by the regular RMS – rented single-detached homes, semi-detached (double) homes, rented freehold row/townhomes, rented duplex apartments (i.e., one-above-other), rented accessory apartments (separate dwelling units that are located within the structure of another dwelling type), rented condominiums (can be any dwelling type but are primarily apartments), and one or two apartments which are part of a commercial or other type of structure.

The SRMS has three components which are conducted in selected CMAs:

- A Household Rent Survey of all households to collect information about rents in the following CMAs: Abbotsford, Barrie, Calgary, Edmonton, Halifax, Hamilton, Kelowna, Montréal, Ottawa, Québec, Regina, Saskatoon, St. Catharines-Niagara, St. John's, Toronto, Vancouver, Victoria, Windsor and Winnipeg.
- A Condominium Apartment Rent Survey of households living in condominium apartments to collect information about rents in the following CMAs: Calgary, Edmonton, Montréal, Ottawa, Québec, Toronto, Vancouver, Victoria and Winnipeg.
- A Condominium Apartment Vacancy Survey to collect vacancy information in the following CMAs: Calgary, Edmonton, Gatineau, Hamilton, Kelowna, Kitchener, London, Montréal, Ottawa, Québec, Regina, Saskatoon, Toronto, Vancouver, Victoria and Winnipeg.

All three surveys are conducted by telephone interviews. For the condominium apartment vacancy survey, information is obtained from the property management company or condominium (strata) board, or building superintendent and can be supplemented by site visits if no telephone contact is made. For the other two surveys, information is collected from an adult living in the household. All surveys are conducted in late summer and early fall, and the results reflect market conditions at that time.

CMHC publishes the number of units rented and vacancy rates from the condominium vacancy survey. For the condominium rent and household rent surveys, the average rent is published. A letter code representing the statistical reliability (i.e., the coefficient of variation (CV)) for each estimate is provided to indicate the data reliability.

Every year CMHC reviews the method of estimation for Household Rent Survey, which may result in some changes to previously published estimates. All statistics in this report are reflective of the new method of estimation.

## DEFINITIONS

**Availability:** A rental unit is considered available if the existing tenant has given, or has received, notice to move, and a new tenant has not signed a lease; or the unit is vacant (see definition of vacancy below).

**Rent:** The rent refers to the actual amount tenants pay for their unit. No adjustments are made for the inclusion or exclusion of amenities and services such as heat, hydro, parking, and hot water. For available and vacant units, the rent is the amount the owner is asking for the unit.

It should be noted that the average rents reported in this publication provide a sound indication of the amounts paid by unit size and geographical sector. Utilities such as heating, electricity and hot water may or may not be included in the rent.

**Rental Apartment Structure:** Any building containing three or more rental units, of which at least one unit is not ground oriented. Owner-occupied units are not included in the rental building unit count.

**Rental Row (Townhouse) Structure:** Any building containing three or more rental units, all of which are ground oriented with vertical divisions. Owner-occupied units are not included in the rental building unit count. These row units in some centres are commonly referred to as townhouses.

**Vacancy:** A unit is considered vacant if, at the time of the survey, it is physically unoccupied and available for immediate rental.

### Definitions of Census Areas referred to in this publication are as follows:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

Data presented is based on Statistics Canada's 2011 Census area definitions.

### Acknowledgement

The Rental Market Survey and the Secondary Rental Market Survey could not have been conducted without the cooperation of the rental property owners, managers, building superintendents and household members throughout Canada. CMHC acknowledges their hard work and assistance in providing timely and accurate information. As a result of their contribution, CMHC is able to provide information that benefits the entire housing industry.

## CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for almost 70 years.

CMHC helps Canadians meet their housing needs. As Canada's authority on housing, we contribute to the stability of the housing market and financial system, provide support for Canadians in housing need, and offer objective housing research and information to Canadian governments, consumers and the housing industry. Prudent risk management, strong corporate governance and transparency are cornerstones of our operations.
