<b>Vacancy Rate</b>	<b>Vacancy Rate</b>	<b>Vacancy Rate</b>	<b>Vacancy Rate</b>
\$563 Avg. Rent	\$648 Avg. Rent	\$751 Avg. Rent	\$881 Avg. Rent

“The data would suggest that in 2016, in Quebec, the increase in net migration absorbed the increase in supply. As a result, the vacancy rate remained stable.”

**Kevin Hughes**  
Regional Economist (province of Quebec)

\*CMHC collects data on the primary and secondary rental market annually, in the fall. These data refer to the primary rental market, which only includes rental units in privately-initiated apartment structures containing at least three rental units. The secondary rental market covers rental dwellings that were not originally purpose-built for the rental market, including rental condominiums. The primary vacancy rate and rent level is based on all surveyed structures, while the rent increase is based only on structures common to the survey sample in both the current and previous year.

<sup>1</sup> Urban centres with a population of 10,000 + are included in the survey. Detailed reports are available for CMAs.

## Vacancy rates

According to the results of the Rental Market Survey conducted by Canada Mortgage and Housing Corporation (CMHC) in October, 4.4 per cent of the over 836,000 housing units in Quebec were vacant in October 2016. The provincial vacancy rate therefore remained stable in relation to the estimated rate for last year. Of the province's 44 urban centres, about 60 per cent recorded no significant variations in their vacancy rates, nearly 30 per cent posted increases and just over 10 per cent showed decreases.

For the census metropolitan areas (CMAs), only Québec and Sherbrooke recorded significant changes in their vacancy rates, with both increasing. As for the urban agglomerations, the October survey results revealed that the vacancy rate for all centres with 10,000 to 49,999 inhabitants remained stable and the rate for centres with 50,000 to 99,999 inhabitants fell slightly (see table I.I.I).

Comparing the vacancy rates of the six CMAs showed a clear difference between the Montréal CMA (vacancy rate of 3.9 per cent) and the other areas. The Trois-Rivières, Gatineau and Sherbrooke areas recorded vacancy rates over 6 per cent and, in the Saguenay CMA, the vacancy rate even reached the 7-per-cent mark. The Québec CMA showed another increase, with the rate there going from 4.0 per cent to 4.9 per cent (see table I.I.I).

As in the past, larger apartments showed a better rental performance, according to the survey results

## Availability rate and tenant turnover rate

According to the survey, 5 per cent of units were available province-wide<sup>2</sup>. This year, CMHC introduced a new indicator of rental market conditions: the tenant turnover rate, which is equivalent to the proportion of units that changed tenants during the last 12 months. For the province overall, this rate was estimated at 18.3 per cent, varying from 17.3 per cent in Montréal to 21.7 per cent in Sherbrooke.

The values of these two indicators by geographic sector and by apartment type were congruent with the vacancy rate levels, that is to say that the rental performance was generally better in Montréal and that larger units were easier to rent out.

## Rents

The provincial average rent for two-bedroom apartments was \$751. Among the CMAs, the corresponding averages reached a high of \$808 in Québec and a low of \$587 in Trois-Rivières and Saguenay. The estimated change in the average rent, meanwhile, was 1.5 per cent for the province, with the changes varying between 0.9 per cent and 2.1 per cent among the CMAs.

## Migrants and retirees appear to have absorbed additional supply

According to the results of the CMHC Starts and Completions Survey, the supply of rental units grew significantly over the last 12 months, particularly in the Québec and Montréal CMAs.

There was no growth in demand from new young households with recently employed members (in fact, a drop in employment for 15- to 24-year-olds was recorded in the Montréal CMA). Therefore, it is suspected that additional demand was a result of migration. Indeed, the results of Statistics Canada's Labour Force Survey showed significant increases in the number of immigrants, the number of non-permanent residents and net interprovincial migration.

Still on the subject of demographics, it could be that acceleration in the growth of the number of households with maintainers aged 75 and over also boosted rental demand, since that is the age at which people often change tenures.

## Rental condominiums

According to the results of the Secondary Rental Market Survey, which includes only the Montréal, Québec and Gatineau areas in the province, increases in the numbers of rental condominiums were recorded in these three areas. That said, the proportions of condominiums offered for rent remained stable in both Montréal (15.7 per cent) and Québec (11.4 per cent). In Gatineau, the proportion, which was already the highest among the three CMAs

<sup>2</sup> The availability rate takes into account not only vacant units but also units for which the tenant has given notice to move and for which a new tenant has not signed a lease. The availability rate therefore gives a broad idea of the supply of units in the short term.

last year, grew to nearly 31 per cent, a sign that resale market conditions remained soft in this segment.

Relative to the other CMAs in Canada, the Montréal and Québec CMAs posted the lowest proportions in the country, while the proportion recorded in the Gatineau area was among the highest.

As for the vacancy rates for rental condominiums, the survey results show that they were either comparable to or lower than those observed for conventional rental units—a clear indication of the appeal of rental condominiums.

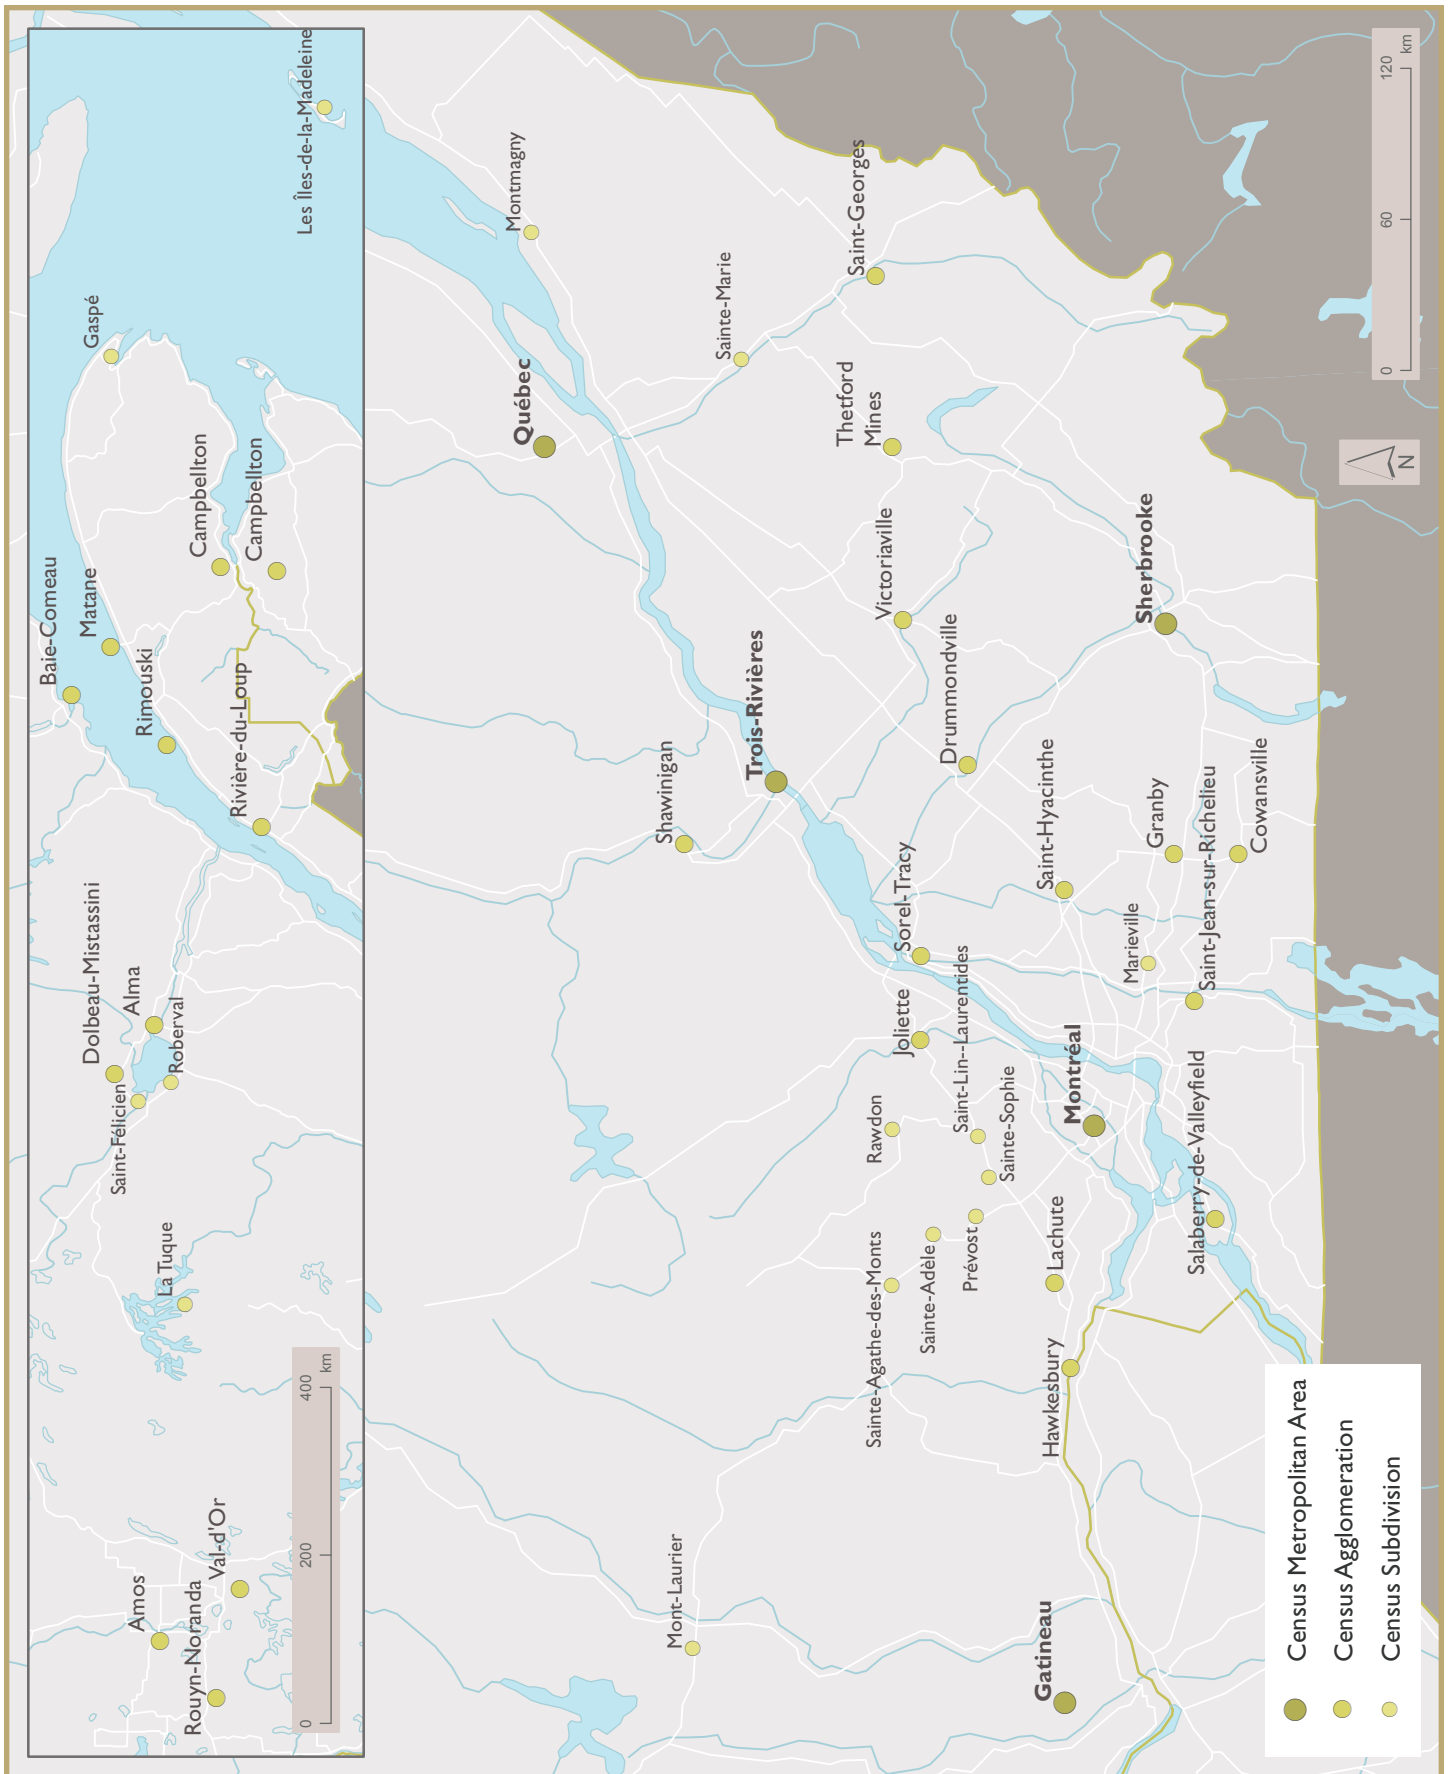

In terms of the average rents, only the Montréal CMA showed a statistically significant change (the average rent went from \$1,091 last year to \$1,158 in October 2016).

Table 1 Vacancy Rates (%)								
CMA	Rental Condominiums				Conventional Rental Units			
	oct.15		oct.16		oct.15		oct.16	
Ottawa-Gatineau (Que. part)	4.0	c	5.1	b	5.9	b	6.3	b
Montréal	3.0	b	3.1	c	4.0	a	3.9	a
Québec	4.0	c	4.8	c	4.0	a	4.9	a

Source : CMHC

Unsurprisingly, the average rent for rental condominiums remained significantly higher than the average for conventional rental units. In the Montréal CMA, it was around 46 per cent higher. In the Québec CMA, the average rent for rental condominiums was \$1,033—about 28 per cent higher than for conventional rental units. In the Gatineau area, the average rent of \$1,008 was around 33 per cent higher than for conventional units.

The rent difference between the rental condominium and conventional rental markets is partly due to the fact that the condominium stock is generally newer and higher-end and offers a more complete range of specific amenities than conventional rental housing.

Total	22,402		22,776	

<sup>1</sup>Statistics for secondary rented units exclude apartments in purpose built rental structures with three rental units or more, condominium apartments, units in institutions, and any dwelling whose type could not be identified in the survey.

For an explanation of the letters and symbols used in the Rental Market tables, please refer to our [Methodology](#) page.

## TECHNICAL NOTE:

*Difference between Percentage Change of Average Rents (Existing and New Structures) AND Percentage Change of Average Rents from Fixed Sample (Existing Structures Only):*

**Percentage Change of Average Rents (New and Existing Structures):** The increase/decrease obtained from the calculation of percentage change of average rents between two years (example: \$500 in the previous year vs. \$550 in current survey represents an increase of 10 percent) is impacted by changes in the composition of the rental universe (e.g. the inclusion of newly built luxury rental buildings in the survey, rental units renovated/upgraded or changing tenants could put upward pressure on average rents in comparison to the previous year) as well as by the rent level movement (e.g. increase/decrease in the level of rents that landlords charge their tenants).

**Percentage Change of Average Rents from Fixed Sample (Existing Structures Only):** This is a measure that estimates the rent level movement. The estimate is based on structures that were common to the survey sample for both the previous year and the current Rental Market Surveys. However, some composition effects still remain e.g. rental units renovated/upgraded or changing tenants because the survey does not collect data to such level of details.

## METHODOLOGY FOR RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts the **Rental Market Survey (RMS)** every year in October to estimate the relative strengths in the rental market. The survey is conducted on a sample basis in all urban areas with populations of 10,000 and more. The survey targets only privately initiated structures with at least three rental units, which have been on the market for at least three months. The survey collects market rent levels, availability, turnover and vacancy unit data for all sampled structures.

The survey is conducted by a combination of telephone interviews and site visits, and information is obtained from the owner, manager, or building superintendent. The survey is conducted during the first two weeks of October, and the results reflect market conditions at that time.

CMHC is constantly reviewing the Universe of rental structures in the rental market Universe to ensure that it is as complete as possible. Every year, any newly completed rental structures with at least 3 rental units are added to the Universe. In addition to this, CMHC undertakes comprehensive reviews by comparing the Universe listing to other sources of data to ensure that the list of structures is as complete as possible.

CMHC's Rental Market Survey provides a snapshot of vacancy, availability, and turnover rates and average rents in both new and existing structures. There also exists a measure for the change in rent that is calculated based on existing structures only. The estimate is based on structures that were common to the survey sample for both the previous and the current Rental Market Surveys. The change in rent in existing structures is an estimate of the change in rent that the landlords charge and removes compositional effects on the rent level movement due to new buildings, conversions, and survey sample rotation. The estimate of percent change in rent is available in all Canada and Provincial Highlights publications, and also in the CMA reports. The rent levels in new and existing structures are also published. While the percent change in rents in existing structures published in the reports are statistically significant, changes in rents that one might calculate based on rent levels in new and existing structures may or may not be statistically significant.

## METHODOLOGY FOR SECONDARY RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts a survey of the **Secondary Rental Market (SRMS)** in late summer and early fall to estimate the relative strengths in the secondary rental market which is defined as those dwellings not covered by the regular RMS – rented single-detached homes, semi-detached (double) homes, rented freehold row/townhomes, rented duplex apartments (i.e., one-above-other), rented accessory apartments (separate dwelling units that are located within the structure of another dwelling type), rented condominiums (can be any dwelling type but are primarily apartments), and one or two apartments which are part of a commercial or other type of structure.

The SRMS has two components which are conducted in selected CMAs:

- A Household Rent Survey of all households to collect information about rents in the following CMAs: Abbotsford-Mission, Barrie, Calgary, Edmonton, Halifax, Hamilton, Kelowna, Montréal, Ottawa, Québec, Regina, Saskatoon, St. Catharines-Niagara, St. John's, Toronto, Vancouver, Victoria, Windsor and Winnipeg.
- A Condominium Apartment Survey to collect vacancy and rent information in the following CMAs: Calgary, Edmonton, Gatineau, Halifax, Hamilton, Kelowna, Kitchener-Cambridge-Waterloo, London, Montréal, Ottawa, Québec, Regina, Saskatoon, Toronto, Vancouver, Victoria and Winnipeg.

Both these surveys are conducted by telephone interviews. For the Condominium Apartment Survey, information is obtained from the property management company or condominium (strata) board, or building superintendent and can be supplemented by site visits if no telephone contact is made. For the Household Rent Survey, information is collected from an adult living in the household. Both surveys are conducted in late summer and early fall, and the results reflect market conditions at that time.

CMHC publishes the number of units rented and vacancy rates from the Condominium Apartment Survey. For the Household Rent Survey, the average rent is published. A letter code representing the statistical reliability (i.e., the coefficient of variation (CV)) for each estimate is provided to indicate the data reliability.

Every year CMHC reviews the method of estimation for Household Rent Survey, which may result in some changes to previously published estimates. All statistics in this report are reflective of the new method of estimation.

## RENTAL MARKET SURVEY (RMS) AND SECONDARY RENTAL MARKET SURVEY (SRMS) DATA RELIABILITY

CMHC does not publish an estimate (e.g. Vacancy Rates and Average Rents) if the reliability of the estimate is too low or the confidentiality rules are violated. The ability to publish an estimate is generally determined by its statistical reliability, which is measured using the coefficient of variation (CV). CV of an estimate is defined as the ratio of the standard deviation to the estimate and CV is generally expressed a percentage. For example, let the average rent for one bedroom apartments in a given CMA be  $\bar{x}$  and its standard deviation be  $\sigma_{\bar{x}}$ . Then the Coefficient of Variation is given by  $CV = \frac{\sigma_{\bar{x}}}{\bar{x}}$ .

### Reliability Codes for Proportions

CMHC uses CV, sampling fraction and universe size to determine the ability to publish proportions such as vacancy rates, availability rates and turnover rates. The following letter codes are used to indicate the level of reliability of proportions:

a – Excellent

b – Very good

c – Good

d – Fair (Use with Caution)

\*\* – Poor – Suppressed

++ – Change in rent is not statistically significant. This means that the change in rent is not statistically different than zero (0).

-- No units exist in the universe for this category

n/a – Not applicable

The following two tables indicate the level of reliability of proportions:

If the proportion is Zero (0) and sampling fraction is less than 100% then the following levels are assigned:

#### Sampling Fraction (%) range

Structures in Universe	(0,20]*	(20,40]	(40,60]	(60,80]	(80,100)
3 – 10	Poor	Poor	Poor	Poor	Poor
11 – 20	Poor	Fair	Fair	Fair	Good
21 – 40	Poor	Fair	Fair	Good	Very Good
41 – 80	Poor	Fair	Good	Good	Very Good
81+	Poor	Good	Good	Very Good	Very Good

\*(0, 20] means sampling fraction is greater than 0% but less than or equal to 20%; others are similar.

Otherwise, the following table is used to determine the reliability level of proportions:

#### Coefficient of Variation (CV) %

Vacancy Rate	0	(0,5]	(5,10]	(10,16.5]	(16.5,33.3]	(33.3,50]	50+
(0,0.75]	Excellent	Excellent	Excellent	Excellent	Excellent	V. Good	V. Good
(0.75,1.5]	Excellent	Excellent	Excellent	Excellent	Excellent	Fair	Poor
(1.5,3]	Excellent	Excellent	Excellent	V. Good	Good	Poor	Poor
(3,6]	Excellent	Excellent	V. Good	Good	Fair	Poor	Poor
(6,10]	Excellent	Excellent	V. Good	Good	Poor	Poor	Poor
(10,15]	Excellent	Excellent	Good	Fair	Poor	Poor	Poor
(15,30]	Excellent	Excellent	Fair	Poor	Poor	Poor	Poor
(30,100]	Excellent	Excellent	Poor	Poor	Poor	Poor	Poor

## Reliability Codes for Averages and Totals

CMHC uses the CV to determine the reliability level of the estimates of average rents and a CV cut-off of 10% for publication of totals and averages. It is felt that this level of reliability best balances the need for high quality data and not publishing unreliable data. CMHC assigns a level of reliability as follows (CV's are given in percentages):

- a – If the CV is greater than 0 and less than or equal to 2.5 then the level of reliability is **Excellent**.
- b – If the CV is greater than 2.5 and less than or equal to 5 then the level of reliability is **Very Good**.
- c – If the CV is greater than 5 and less than or equal to 7.5 then the level of reliability is **Good**.
- d – If the CV is greater than 7.5 and less than or equal to 10 then the level of reliability is **Fair**.
- \*\* – If the CV is greater than 10 then the level of reliability is **Poor**. (Do Not Publish)

## Arrows indicate Statistically Significant Changes

Use caution when comparing statistics from one year to the next. Even if there is a year over year change, it is not necessarily a statistically significant change. When applicable, tables in this report include indicators to help interpret changes:

- ↑ indicates the year-over-year change is a statistically significant increase.
- ↓ indicates the year-over-year change is a statistically significant decrease.
- indicates that the effective sample does not allow one to interpret any year-over-year change as being statistically significant.
- △ indicates that the change is statistically significant

## DEFINITIONS

**Availability:** A rental unit is considered available if the existing tenant has given, or has received, notice to move, and a new tenant has not signed a lease; or the unit is vacant (see definition of vacancy below).

**Rent:** The rent refers to the actual amount tenants pay for their unit. No adjustments are made for the inclusion or exclusion of amenities and services such as heat, hydro, parking, and hot water. For available and vacant units, the rent is the amount the owner is asking for the unit.

It should be noted that the average rents reported in this publication provide a sound indication of the amounts paid by unit size and geographical sector. Utilities such as heating, electricity and hot water may or may not be included in the rent.

**Rental Apartment Structure:** Any building containing three or more rental units, of which at least one unit is not ground oriented. Owner-occupied units are not included in the rental building unit count.

**Rental Row (Townhouse) Structure:** Any building containing three or more rental units, all of which are ground oriented with vertical divisions. Owner-occupied units are not included in the rental building unit count. These row units in some centres are commonly referred to as townhouses.

**Vacancy:** A unit is considered vacant if, at the time of the survey, it is physically unoccupied and available for immediate rental.

**Turnover:** A unit is counted as being turned over if it was occupied by a new tenant moved in during the past 12 months. A unit can be counted as being turned over more than once in a 12 month period.

### Definitions of Census Areas referred to in this publication are as follows:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

Data presented is based on Statistics Canada's 2011 Census area definitions.

## Acknowledgement

The Rental Market Survey and the Secondary Rental Market Survey could not have been conducted without the cooperation of the rental property owners, managers, building superintendents and household members throughout Canada. CMHC acknowledges their hard work and assistance in providing timely and accurate information. As a result of their contribution CMHC is able to provide information that benefits the entire housing industry.

## CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for almost 70 years.

CMHC helps Canadians meet their housing needs. As Canada's authority on housing, we contribute to the stability of the housing market and financial system, provide support for Canadians in housing need, and offer objective housing research and information to Canadian governments, consumers and the housing industry. Prudent risk management, strong corporate governance and transparency are cornerstones of our operations.
